Mr. Germanium says it all.

With all due regards from Rochester, NY
Jim AA2QA

ps - why Mr. Germanium says it all will, unfortunately, be over the heads of many in the groups. It will not be over the heads of the technically astute.

Likely true, John

Unfortunately, our dear administration has been pointing the finger at a few things (weapons of mass destruction, terrorists, and the gay issue) to avoid the things that should likely concern us most (at least in my mind).

The stupid deficit is beyond comprehension. Not that long ago, we wanted a weaker dollar so we could export more. Now, in the paper, Wall Street responds positively to a *stronger* dollar. Could we be praying that folks don't figure out that the dollar isn't worth the paper it is printed on? What is going on?

We are turning into a nation of "turn in thy neighbor if you think they aren't exactly 'right'". Sounds like Russia, China, or pre-WWII Germany.

Meanwhile, as you have discovered, both parents have to work today. Minimum wage isn't increasing. Income tax for the 6 figure plus folks has been decreasing, but how about your property tax?

I must admit that I am in danger of becoming a curmudgeon. Wages are terrible. I was making less than 1/3 of what I made in 1989 (not counting inflation!) and all of us were let go that were hired the first of February.

I have a small pension; I think I can live on somewhat over $300 per week take-home. It would not be smart to take a $10.00 per hour job as the tax will be "off the top" and I'd be lucky to take home $300 of the $400.

Meanwhile, I have to pay for gas to get to work? BTW, I had taken a $13.00 per hour tech job. Engineers (contract, anyhow) aren't paid much more. Meanwhile, the city has a job for $11.85 as a parking attendant. The tough requirement is that you have to be able to make change without the use of a calculator or computer. Is something wrong with this picture.

So, I've been resting on my backside. I'm waiting for some small signs of intelligence so that I will feel safe that there will be a *big* change in the coming elections.

Then, and only then, will I go back to work.

Meanwhile, the FBI is getting a substation less than a mile away from me. The police have moved back to a block from me. Somehow, however, I don't feel a whole lot safer. Two shootings in the past 4 months within 6 blocks of me.

Dang! Ain't Bush doing a heck of a job? Don'tcha just feel so safe? :))

Meanwhile, I'd just like a few women to molest me. It has been so many years .... :))

It is tough getting old, but it beats the alternative ;)

73 from Rochester, NY
Jim AA2QA

ps - this background may be why you see some old timers getting their panties in a knot. I don't care about cw (although I've enjoyed it), but feel folks should have some *minimal* background for their ticket.

pps - it isn't about applying the knowledge; it is the fact that knowing the answers to certain questions does *not* mean you even understand the material.

I am not all that concerned about the "technical knowledge" side of the
test.
I think basic technical knowledge is all that is really necessary. Like
being
able to cut a simple dipole, understand the terminology, have a working
knowledge in block diagram format, for what is happening inside that radio.

And I totally agree that the test should be heavy on rules, regs, and PROPER
OPERATING PROCEDURES....like don't talk CB Crap on HF SSB. \
>
> As you say Dan, with the joke they use for testing today, no technical

We agree it lots here, eh?

> It is pretty bad when as I heard not long ago on a 2 meter reperter, "I
> just got my license, can someone tell me what frequencies I can operate?"
> Cheeese.
>

Or what I heard on the 75meter EKTRA band......I wanna cut a new dipole
for 80m phone (First off what is 80 meter phone?)(I always thought it was
75meter phone). Out of the 5 people in the group, one had it right.
Amazing.

> Even wogie wussman passed the test, that in itself speaks volumns about
> how easy the they are.

He should have done real good the second time around...yuk yuk.

We have plenty of hi-tech stuff going on in Amateur Radio. Just not all
that much at HF or on the two meter CB band of FM machines.

Just off the top of my head.....ever hear of AMSAT? You know those
satellite thingy's?

Or how about digital voice on HF? Digital SlowScan? Or for that matter
digital fast scan TV? Then of course the utter glut of new and experimental
digital modes....too many to even talk about here. Then don't forget the
EME (moonbounce) with WSJT program that allows you to do what it took a KW
and 4 / 16 element phased yagis to do just a decade ago, with only 150
watts OR LESS?

So lets not talk about hams not doing anything technical.

Next BS line.

You're mistaken.

MilRec Amateur Radio station licenses (and calls) are assigned by the FCC. The military has NO legal jurisdiction over the assignment of those calls. No Morse or written test is required to obtain this station license.

Just a couple of examples of these station licenses are W4ODR and KH6SP. These Military Auspices station licenses number less than 100, so are not a significant percentage off all station licenses and can be ignored in the sort of census that N2EY records here.

Another example of Andersoneque half-vast knowledge of Amateur Radio matters.

The information is available to all citizens, even non-licensed persons, in FCC rules at &#65533;97.5(b)(3).

Hello, Mike

True enough. Interestingly, although I had some problems with The Calculus,
I've overcome much of it in the past 3 months simply because I suddenly
found it "interesting".

As to education, I'm surprised at the number of folks with "associates" or "baccalaureate" degrees that are totally lacking in the sciences. They do seem proficient, however, at "cut and paste".

Most interesting.

Hello, Kim

A few years ago, I was with AT&T. It took, perhaps, only a minute or so to be connected with the help desk.

I left for DSL and after two years went back to dial-up. Frontier (the DSL provider) was good with the help desk. I only needed it once when they changed my ISP address.

I needed the help desk once with AT&T. Reasonably fast, but obviously Indian in origin, they kept offering me all of these "extras". Heck, I had a problem with newgroups. Oh, no newsgroups. OK.

Well, I went back to Frontier. I received a new modem, but called the help desk to see if I could use the old one from two years before. They answered immediately. It was a local help desk. Yes, I could.

Well, no DSL signal. I called again and they informed me it would be turned on two days later. Fine. I hung up and started watching television.

Suddenly, there were some "clicks" on the telephones in the house. I became suspicious and turned on the modem. Sure enough, it synchronized with a DSL signal. I turned on the computer and the internet came up with a rush that I wasn't used to. A 3 megabaud pipe between me and the Internet. I was up and running! Oh yes, free newsgroups :)

For this change from "decent" help support from India to "immediate" local response and a change from 56k to 3,000k I had in increase from $15.00 per month to $30.00 per month (ok, $29.95). I can handle that ;)

You betcha. This short sighted sh*t will catch up with various companies.

Meanwhile, I'm waiting for my "agreement" to not work for a competitor to end (24 months). I am thinking seriously of e-mailing a most interesting program to a competitor. It was developed entirely at home on my computer

with my (purchased and legal) software. If they wish, they (the foreign competitor) can mail me a dollar. No American company would pay me for it, so the foreigners can have it; the former employer can deal with it later ;)

In the meantime, by not working, not only don't I have to pay taxes off the top (and worry about paying for gasoline off what I am left), I may be entitled to free care at the V.A. next year! Of course, I'll still have to pay co-payments for prescriptions, but WTH.

Also, I am keeping up the modest payments to maintain my health coverage from my former employer. Life is sweet :))

All I need is 4 more years to Social Insecurity.

As was stated in one of the "Startrek" movies, revenge is a dish best served cold.

> the increasing population.

The total number of amateur radio licensees as a percentage of the
US population is only one factor in the regulatory process. Other
factors include the number of *active* licensees, the way the
allocated spectrum is used, compliance with FCC rules,
the needs and wants of the ARS vs. other services, new and old
technologies, to name but a few.

> 2. To retain a sizeable market for both equipment, components,
> and publications aimed at radio amateurs. There are many,
> many, many markets for electronics items today, much more
> so than a half century ago.

Agreed. However, the variety of equipment available to radio
amateurs today far exceeds that of the past, and the cost in
constant dollars is far less.

> Manufacturers of equipment,
> components, and publications desire a large enough
> market to enable profit; shrinking market numbers are
> coincident with reduced profit and that be a no-no.

Yet even small companies serving niches in the amateur radio
market have demonstrated they can survive.

> 3. Actuarial tables will show that normal life span is going
> to have a greater effect on an activity where the

> participants are above the median population age...which
> increases the probability of earlier attrition of numbers.

In other words, the older the population, the more of 'em are
going to die off sooner.

> [regardless of egregious boasting or frequent, vociferous
> denial, radio amateurs will NOT live forever]

Who boasted that?

> Note:
> amateur radio demographics indicate the participants are
> older than the national population median age.

It would be interesting to see detailed statistics on that. Can you
provide them, Len?

Two caveats on median age comparisons:

1) There are relatively few radio amateurs younger
than about 10 years of age. So any comparison
to the general population should be adjusted to
compensate for the fact that the median age of the
US population can reasonably be expected to
be lower than that of an activity such as amateur
radio.

2) The source of amateur radio licensee age
statistics can be problematic. The FCC has
changed its policy on birthdate information
as part of the requirements, so some licensees
ages are known and others are unknown, making
the FCC database a problematic source of
licensee age information.
Surveys and polls may or may not be a
representative sample of the amateur radio
population.

A more illuminating statistic, IMHO, would be to compare
the distribution of the ages of amateur radio operators
to the distribution of the ages of the general population.

> 4. Amateur radio is basically a HOBBY.

For many if not most radio amateurs, that is true. But there
is a significant public service element to the amateur radio
service that is not a part of most other "hobby" activities.

> There are many more
> types and kinds of activity available to the population
> today versus a half century ago and that is competition
> for available free time for hobbyists.

There are also more hobbyists and more free time. More retirees
and semi-retirees. People are living longer and staying active longer.

> Greater numbers
> of amateur radio participants will increase exposure and
> possible interest to the general public, demonstrate to
> government agencies for favorable decisions in favor of
> amateur radio participants.

That is true only if the "greater numbers" are active, visible, and
present a positive image to the general public and government
agencies.

> Note: The ARRL membership
> as of the end of 2004 was only 140 thousand while the
> Academy of Model Aeronautics, the USA national membership
> organization of model airplane flyers was 175 thousand
> at that same time. [source: website statements of both
> organizations]

An interesting statistic, but of itself tells little. Additional
information is
needed to understand the full meaning.

For example, what does it cost to be a member of the Academy of
Model Aeronautics? How long is a membership good for? What services
does the Academy offer its membership?

> 5. The no-code-test Technician Class license has only been
> available for 14 years and (as of Sunday, 5 Jun 05) already
> has 293,613 licensees out of a total of 722,452 individual
> licenses in the USA.

The above numbers include expired-but-in-the-grace-period
licenses as well as current (unexpired) licenses. The number of
current licenses is significantly lower.

The term "no-code-test Technician Class" is not entirely accurate.
An unknown number of amateur whose license class is Technician
have passed a code test. These include:

- Former Novices who passed the Technician written test after April
15, 2000

- Former Technician Plus licensees who renewed their licenses after
April
15, 2000

- Technician licensees who passed the code test after April 1, 2000 but
who
have not upgraded to a higher license class.

> Had that not been available, the
> total number of amateur licenses would have SHRUNK by a
> sizeable number.

This statement is an opinion, not a fact. There is no way to know for sure
what would have happened.

However, it should be noted that, in the 9 years and two months from February 14, 1991
to April 15, 2000, the overall growth in the number of FCC issued amateur radio licenses
was less in both total number of licenses and percentage growth, than the growth for an equal period of time before February 14, 1991. (That date is when the Technician class license no longer required a code test).

In addition, there has been a net loss of total FCC amateur radio licenses held by individuals since the restructuring of April 2000. Despite reductions in both code and written testing, and the reduction of license classes open to newcomers, growth has
not occurred.

> The exact amount of shrinkage is
> unknown since it is impossible to accurately predict an
> alternate future.

There is a logical contradiction here.

First Len claimed that a "shrinkage" (loss of total number of licenses) would
have occurred if the Technician had retained its 5 wpm code test. Then, he
admits that it is impossible to accurately predict an alternate future.

Both statements cannot be simultaneously true. One of them must be incorrect.

> That shrinkage could, at worst case,
> reduced the Sunday totals to 428,839 total individual
> licenses, a drop to 59.36 percent.

The preceding statement is incorrect.

The 293,613 Technician class licenses cited above are not all "no-code-test" licenses. Therefore, had the Technician retained its code test, at least some of those 293,613 would still be licensed amateurs. An additional unknown number would have earned licenses regardless of the code test.

> Currently (as of
> Sunday, 5 Jun 05) the no-code-test Technician class
> license represents 40.64 percent of the total individual
> license grants.

The preceding statement does not recognize the fact that not all licenses of the Technician class are "no code test". It is therefore misleading to the point of possibly being incorrect.

As the FCC continues to renew all Technician Plus licenses
as Technician, the number of code-tested Technicians
continues to grow.

> 6. The availability of communications resources to the general
> public has greatly expanded in the last half century.

As it did in the half-century preceding ...

> Direct-dial-telephone service is available to all telephone
> subscribers in the USA from small towns to large urban
> areas; that includes direct dialing to foreign telephone
> subscribers.

None of these are radio services that require licensing by the user.
Indeed, most of them are not radio services at all.

The only real significance of these communications alternatives
to amateur radio growth is that they are additional choices for the
person whose primary interest is the message rather than the medium.
For the person who is more interested in "radio for its own sake",
they are not a substitute.

Consider the analogy of water transport. For millenia, watercraft were
propelled by wind, muscles (human or animal) and/or water currents.
Traveling by water meant those motive power sources and no others.

Then the invention of steam and internal-combustion engines created
a whole new set of alternatives. In less than a century, most water
transportation abandoned wind and muscle power entirely, in favor
of fossil-fueled and even nuclear-powered engines.

Yet sailboats, rowboats and canoes still exist. They are most used
by those for whom the journey is more than simply getting from
Point A to Point B.

> The number of "eleven meter" CB transceivers
> in use in the USA is roughly 5 MILLION (electronic industry
> estimates several years ago);

There is no way to know for sure how many of these are actually
in use, because there is no license procedure for that radio
service. The number quoted is a decline from the boom
years of the "cb craze", about 30 years ago. Despite the low cost
of cb equipment, the lack of licensing and rules enforcement, and

the widespread availability, the cb service has been in decline from
its peak for a couple of decades now - while the population considers
to increase.

> "CB" has existed for 47
> years.

Citizens band allocations in the 27 MHz region were created 47 years
ago,
but the service goes back to 1948, when UHF allocations were created by
FCC. The current GMRS and FRS allocations are the direct descendants
of those 1948 allocations.

> FRS and GMRS handheld, average 5-mile range, are
> available in consumer electronics stores/departments for
> less than $100 a pair (no license required for FRS radios).
> Throughout the USA public safety agencies have some form
> of non-amateur radio communications, as do utility,
> transportation, highway maintenance industries; the business
> and government radio market has long been established in
> the USA and major countries in the world.

Yet in emergency situations, the amateur radio service continues to
perform public service.

> attempt at some resumption of Ham Radio magazine content, were
> joined, but with marginal success on ad space sales] Note:
> HR, 73, CQ are all "independent" periodical publishers whose
> operating income is dependent entirely on advertising space
> sales.

The previous statement is obviously incorrect, since none of the
above mentioned are free publications. It is obvious that "operating
income" includes all income available for the production of a
publication - advertising, subscriptions, etc.

> Some non-amateur-specific periodicals such as Popular
> Communications have enjoyed an increase in readership and

>
> To sustain at least the status quo, U.S. amateur radio license
> numbers must follow the population increase. To be competitive
> for both attention and product pricing, as well as for favorable
> regulations and new products, the license numbers must grow.

This may or may not be true. Simply increasing the number of
licenses may not result in a larger market for equipment or
publications, nor a more-favorable regulatory climate. The 27 MHz
cb example is not what amateur radio should emulate.

> Individual radio amateurs have expressed an opinion that growth
> should NOT happen.

Who would that be, Len? What did they say, exactly?

> Those may be looking at their own activities
> without regard for the overall national picture or advances in
> overall communications capabilities. To them everything is
> "comfortable" as it is.

Perhaps. It is important, however, to evaluate whether proposed
changes will actually bring growth, and also whether there will
be negative effects connected with the proposed changes that
will negate the positive effects of growth.

Greater quantity will not help the ARS if the quality suffers too
much.

> Those same "comfortable as it is"
> amateurs will begin to attrit in a decade or two and their
> numbers will drop.

Who are you referring to, Len?

> That will shrink the number of licensees
> despite the recent increases due almost entirely to the no-code-
> test licensees of the last 14 years.

In the past 5 years, the number of US hams has decreased, not
increased. The total
number of Technicians and Technician Pluses is lower now than 5 years
ago.

> Shrinkage in numbers due
> to old-timers leaving must be offset by more than just that "new"
> no-code-test license class.

What solution do you propose?

> >Technician Plus licenses are being renewed as Technician.
>
> An absolutely IMPORTANT clarification to obscure the
> fact that no-code-test Technicians are condescendingly
> sponged into the MORSE-TESTED totals.

It's important simply because the license class "Technician" includes
both code-tested and noncodetested amateurs.

> Here's the totals of ALL AMATEUR licenses as given by
> www.hamdata.com as of 5 June 2005, with "delta" relative
> to those same classes two years ago

These totals *include* expired-but-in-the-grace-period licenses.

> ...and the percentage
> of total 2005-date licenses less 9,550 "Club" calls:
>
> Class Licenses Delta Percentage
> Technician (no-code-test) 293,613 +19,932 40.64
> Technician Plus 56,161 -19,480 7.77

Note that the decline in Technician Plus license numbers almost
exactly matches the increase in Technician license numbers.

> Novice 34,116 -8,331 4.72
> General 144,802 +1,855 20.30

>
> As of the hamdata.com figures for this Sunday, 5 Jun 05,
> NO-CODE-TEST Technician Class licensees outnumber General
> Class licensees by an almost exact 2:1 ratio. [General
> class licensees WERE the largest in old days, no more]

The license class "Technician" includes both code-tested and
noncodetested amateurs. If the FCC does not change the rules,
there will be no more Technician Plus licenses less than 5
years from now, because they all will have been renewed as

Technicians.
>
> Nota Bene: The total licenses for the no-code-test
> Technician Class, 293,613, do NOT include the "Tech Plus"
> total licenses of 56,161.

But they *do* include all former Technician Plus licenses that
were renewed after April 15, 2000 but not upgraded since then.

And they include all former Novice licenses upgraded to Technician
after April 15, 2000 but not upgraded since then.

It is incorrect to say that Technicians are all "no-code-test" because
some of them are code tested.

> [let's stop this foolish
> "lumping-together" by rather obvious PCTAs in trying to
> embelish the sanctity and nobility of morsemanship]

FCC has been renewing all Technician Pluses as Technicians since
April 15, 2000. They are doing the "lumping".
>
> ALL license classes in the Technician (no-code-test),
> General, and Amateur Extra classes have the SAME grace
> period.

All amateur radio licenses have the same grace period - two years.

> If current Novice or Advanced license holders
> don't RETEST, they go bye-bye, get defunct, disappear
> from that great database.

The previous statement is incorrect.

Current Novice and Advanced licensees can renew and modify their
licenses indefinitely, and retain their operating privileges. There is
no retesting requirement for them to retain their current operating
privileges.

Current Technician Plus licensees can renew and modify their
licenses indefinitely, and retain their operating privileges. There is
no retesting requirement for them to retain their current operating
privileges. However, their licenses will be
renewed as Technician.

> The current percentage of NO-CODE-TEST Technician class
> licensees now make up slightly over FORTY PERCENT of all
> classes.

The license class "Technician" includes both code-tested and
noncodetested amateurs.

It is incorrect to say that Technicians are all "no-code-test" because
some of them are code tested.

> It is obviously the most populous of ALL classes
> and CONTINUES TO GROW.

It grows from three sources:

1) New licensees
2) Upgrades from Novices
3) Renewals of Technician Plus as Technician.

> Neglecting that singular LARGE
> class of radio amateurs is foolish pipe-dreaming or weird
> personal fantasizing.

What "neglect", Len? They are listed along with all others.

> We now return you to the regularly scheduled PCTA
> rationalization party in progress...

No rationalization on my part, Len. The numbers I post are what they
say: current, unexpired licenses held by individuals. I do not include
expired-but-in-the-grace-period licenses, nor club or other
non-individual licenses.

That's simply UNTRUE!

Again you display your half-vast ability to understand the FCC rules.

Current Novice and current Advanced license holders can renew at their current class until they no longer take nourishment and assume room temperature. No RETEST required.

Don't you just hate it when facts spoil your ill-researched rants?

Reading from a script reminds me of encounters in various fast food places
that go something like this:-

Customer: I'd like a burger and fries please

Staff person: Would you like fries with that?

The moral is that you don't have to be ignorant of the language to be
reading from a script

Whoa! We're (not) impressed.

BTW...I point out that I studied and prepared for my license the
old fashion way and you make light of it...So...What are we to do with
YOU, Licenseless One?

> >> All of those non-ham radios are in use by "riff-raff?"

Every venue has it's bad apple...Amateur Radio had Bash...RRAP has
Lennie.

> Just as irrelevant to the fact that Bruce Perens, founder of
> the No Code International interest group was a 20 WPM code-
> tested Amateur Extra BEFORE he founded that group.

Good for him.

He had an ideal, prepared it, presented it, and used it
effectively.

In the process, he didn't violate a single American law, nor did
he find it necessary to villify, denigrate or otherwise demean other
Amateur Radio operators in the proces

> Class C and D Citizens Band Radio Service is close to the

And we're S T I L L waiting for some point to be made.

WHAT does the history of the Citizen's Radio Service have to do
with changes in the AMATEUR Radio Service due to Bash/NCT?

> "Pbthpththth" says Bill the Cat. Hear the Opus.

"Inherit The Wind" all over again.

> Don't worry though, we're moving to "Faith Based Science".

An oxymoron if there ever was one!

> The pilot program is going on right now in Kansas.

The surreal thing about it is that it comes down to trying to understand a complex Book, not science. In fact, it's all about just the first few chapters of that Book.

Yet one wonders if those who are most adamant about said Book have actually read it, because in its first few chapters, it tells two different creation stories that contradict each other.

Geeeze, Lennie...

Even on the Anniversary of D-Day, you continue to make a parody of the Tomb of the Unknowns.

Yet you continue to try and convince all of us on what a great, patriotic Veteran you are, sensitive to the plight of your fellow servicemen.

And once again you prove the REST of us right when we call you a self-serving blight on ALL Veterans. A liar for the ages.

What you ARE, is a disgrace to the uniform you wore and a footprint on the graves of men who DID serve their country unselfishly.

Scumbag.

Nice try at an end run, Lennie. "Military" club stations ARE
administered by the FCC.

The only callsigns issued by any of the Armed Forces for US
Amateurs are those issued by the Air Force for American's subject to
the US-Japan SOFA who are IN Japan. ie: KA6CM (gee...where have we
heard THAT before...???)

> Nota Bene: The total licenses for the no-code-test

The FCC ONLY issues the "Technician" class of license...Has for
several years now. Also, taking those "Tech Plus" folks out of your
"Technician" column only dilutes YOUR arguments, Lennie.

It's impossible to tell who held "code tested" Technicians and
who doesn't unless you go to the database and search for "previous
class" and find those who DID hold the "Tech Plus" license. Those
folks have been ABSOLUTELY code tested.

However current FCC practice (you remember them, Lennie..?!?! The
UNlicnesed guys and gals who make the rules...!?!?!) is to allow ANY
Tech who has passed Element 1 and holds a CSCE as evidence of same to
exercise "Tech Plus" privileges without further administrative action.

> ALL license classes in the Technician (no-code-test),

Your Putziness, so don't pee in it...

> "Weekly evidence?" There are large-enough emergencies EVERY
> WEEK in the USA that require amateur radio communications
> assistance? [I don't think so...not even "almost"...]

Yep.

Weekly.

> Is it YOUR OPINION that you were an "Assistant" NCOIC at a
> MARS station 24 years ago?

No.

It's a matter of RECORD that I was ANCOIC of the Okinawa
Islandwide MARS System in 1981. I was NCOIC of NNN0MOC/MOF during that
same time...

Just like I told you 6 weeks ago.

> Do you acknowledge that the U.S. military runs MARS or is it
> still YOUR OPINION that "MARS >>IS<< amateur radio?"

It's always been my postition that MARS is run by DoD.

It's ALSO been my position that my comments from the post you
continue to inaccurately paraphrase from were that the same spirit of
service that permeates Amateur Radio is part and parcel of the MARS
programs as they are almost completely fleshed out >>BY<< licensed,
civilian Amateur Radio operators.

No Amateur Radio = No MARS.

It really is THAT simple.

Not true. US Amateurs in Japan are no longer assigned "KA#xx" callsigns. They get their licenses from the Japanese government now (with callsigns in the "foreigners" block "8J#xxx" IIRC).

However, the US Navy does issue callsigns to amateurs at Antarctic Bases (ie, KC4AAA, KC4AAC) and Guantanamo Bay (ie, KG4ML, KG4OX).

Sorry, "I am simply mistaken."

Thus it has been written by the morsemen through which amateur
radio is truly represented in their service to the nation and
any statment, utterance, phrase by those not acquainted with
morse code cannot ever possibly be true.

Remember, Ahab, the white whale may surface any moment! Keep
those harpoons all shiny and sharp! [watch out for Queegquegg,
he is looking for those strawberries...keep your caine handy]

That's simply untrue, "john smith."

NO ONE may comment, talk, discuss, or otherwise be heard unless
they have a valid amateur radio license. Such it is written by
all those morsemen through which all amateur radio is truly
represented in their service to the nation.

>the widespread availability, the cb service has been in decline from
>its peak for a couple of decades now - while the population considers
>to increase.

[only amateur morsemen are truly representative of radio which,
through amateurism is the national transportation served]

>Citizens band allocations in the 27 MHz region were created 47 years
>ago, but the service goes back to 1948, when UHF allocations were created by
>FCC. The current GMRS and FRS allocations are the direct descendants
>of those 1948 allocations.

That is simply mistaken, n...@aol.com.

The electromagnetic spectrum does not exist in frequency unless
it has first been pioneered by amateurs, noted by the ARRL,
and remarked upon by K1ZZ in a QST editorial. FCC does not
count, physics do not count, the fact that the FCC did not
exist prior to 1934 does not count.

[the first mode in radio was telegraphy and that, in 1896, is
the bedrock upon which morsemen trace their radiotelegraphy
roots and morsemen are the only true representatives of
amateur radio in their service to the nation]

>Yet in emergency situations, the amateur radio service continues to
>perform public service.

[so it is written by morsemen who are the true representatives
of amateur radio in their service to the nation]

>The previous statement is obviously incorrect, since none of the
>above mentioned are free publications. It is obvious that "operating
>income" includes all income available for the production of a
>publication - advertising, subscriptions, etc.

You are simply mistaken, n...@aol.com

[so it is written by the morsemen who are all accomplished
publishers as well as radio manufacturers and thus truly
representative of amateur radio in their service to the nation]

>This may or may not be true. Simply increasing the number of
>licenses may not result in a larger market for equipment or
>publications, nor a more-favorable regulatory climate. The 27 MHz
>cb example is not what amateur radio should emulate.

[cb is the scum, the vileness of the devil, spawn of satan
and the only true representatives of radio are the amateur
morsemen serving their nation]

>Perhaps. It is important, however, to evaluate whether proposed
>changes will actually bring growth, and also whether there will
>be negative effects connected with the proposed changes that
>will negate the positive effects of growth.

You are simply mistaken, n...@aol.com.

[only morsemen can know for they represent the true being of
radio and the amateur service to their nation]

>In the past 5 years, the number of US hams has decreased, not
>increased. The total
>number of Technicians and Technician Pluses is lower now than 5 years
>ago.

You are simply mistaken, n...@aol.com.

[only morsemen know the truth for they are truly representative
of amateur radio in their service to the nation]

>What solution do you propose?

Morse code. The salvation of humankind, morse code is the only
answer to immortality, truth, justice, and the American Way.

It smells almost as good when you're cooking it. One of my buddies stopped
by one time when I was cooking a corn beef and cabbage feast. He walked in
the house and got this look on his face like he was gonna hurl! I think he
asked me what the hell died in here. :)

2403. Wiseman finally kicked off NIM Busters

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-07 22:51:44 UTC
From: Stagger Lee <SLee@houston-hunks.com>
Message-ID: <bye.bye.woger@houston-hunks.com>
Source record: 109636
Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.amateur.policy,alt.cocksucker.roger-wiseman

Woger has become persona non grata on all web boards operated by the Admin of NIM Busters. The web boards have therefore been put into a mode where a poster must have a previously-registered IP address in order to post.

This, of course, means that those boards are now censored, and that Woger has dragged them down into the censorship quagmire where they can no longer claim to be "free speech" boards.

Woger has been booted yet again, but at some cost to those who booted him. Typical.

And for all those that are "confused".....here it is;

300/Fmhz = length in meters.

thus......300/4.0Mhz = 75meters.

300/3.75Mhz= 80meters.

and........300/3.5Mhz = 85.7meters.

see?

But you should know what the 300 stands for, not it just being a number!
I'll bet I'm wrong, being a no code cb'er, but the 300 is the speed of
light in meters! to be more percise 299792458 meters per second.

OOps see I told ya, the word is precise, now if only I could do 13 or
more words a minute and go back in time and get a W or K 1x3 call, I
wouldn't have made that mistake! :)

??? How can that POSSIBLY be "true," Super Master Chief?

Do you realize you are correcting a "veteran of seven hostile
actions" who was also the ASSISTANT NCOIC of THE Okinawa
MARS 24 years ago?!? Tsk, tsk, tsk.

>However, the US Navy does issue callsigns to amateurs at Antarctic Bases (ie,
>KC4AAA, KC4AAC) and Guantanamo Bay (ie, KG4ML, KG4OX).

How about that. The Army MARS Hq callsign is NNN0AAA.

Does that appear in that Big Amateur Database at the FCC?

No? Sunnuvagun!

Oh, and thanks for that weblink at Harris Corporation's Tactical
Communications page. It was given out on paper form in 1996.
The second volume was prepared only a few years ago...but then
VHF and up isn't the proper playground for the HF Warriors,
is it? [Amateur Morsemen Warfighters to the Front...]

However, you should have made SOME mention of that informative
textbook "Now You're Talking!" from the ARRL which explains
it all...shouldn't you?

Excuse me while I go look up who used to post some phrase
about "gentlemen should not be disagreeable" or whatever it
was.

bit bit

Harris Corporation is a military communications contractor.

A.F. Global Weather Central purchased a Harris transmitter to kick-off
the Weather HFRB (rtty, fax) System at Elkhorn, NE (AKA Giant Talk).

Harris Corp. built the Satellite Data Handling System at AFGWC.

Harris Corp. built the A.F. tactical DMSP ground set.

Harris Corp. transceivers were stuffed in racks in the Transportable
Automated Weather Distribution System (TAWDS).

But weathermen don't do comms. Hi!

Lightning Safety Awareness Week
June 19th-25th

The Nation will celebrate its fifth annual National Lightning Safety
Awareness Week, June 19-25, 2005.

Lightning is the number two direct weather killer of people in the U.S.
annually.

The National Weather Service office in Morristown would like to thank
all of the people who are helping to make this year's lightning safety
campaign a reality. Lightning Safety Week is held the last full week of
June each year.

Please visit the multimedia page at
http://www.lightningsafety.noaa.gov/multimedia.htm to see some of the
highlights of last year's campaign, including public service
announcements http://www.lightningsafety.noaa.gov/media/index.htm) with
PGA Tour golfer Rocco Mediate and Vijay Singh, and Soccer Star Siri
Mullinix and video clips with some of the other lightning experts who
took part in the press conference.

Here is the Lightning Awareness Week Schedule for this year.

Day Topic
Monday Lightning Overview
Tuesday The Science of Lightning
Wednesday Lightning Safety Outdoors
Thursday Lightning Safety Indoors
Friday Medical Aspects

We will be sending the following information out each day during the
week to highlight the days message. For more information on lightning
safety, visit the National Weather Service Lightning Safety page at
www.lightningsafety.noaa.gov . Again, thank you for helping to get

this important information out to the public.

Monday - Lightning-The Underrated Killer

Lightning-The Underrated Killer

In the United States, there are an estimated 25 million cloud-to-ground lightning flashes each year. Lightning can be fascinating to watch, but it is also extremely dangerous. During the past 30 years, lightning killed an average of 67 people per year in the United States based on documented cases.

This is more than the average of 65 deaths per year caused by tornadoes and the average of 16 deaths per year caused by hurricanes. However, because lightning usually claims only one or two victims at a time, and because lightning does not cause the mass destruction left in the wake of tornadoes or hurricanes, lightning generally receives much less attention than the more destructive weather-related killers.

While documented lightning injuries in the United States average about 300 per year, undocumented injuries caused by lightning are likely much higher.

Lightning Safety Awareness: Education is Key

Few people really understand the dangers of lightning. Many people don't act promptly to protect their lives, property and the lives of others because they don't understand all the dangers associated with thunderstorms and lightning.

The first step in solving this problem is to educate people so that they become aware of the behavior that puts them at risk of being struck by lightning, and to let them know what they can do to reduce that risk. Coaches and other adults who make decisions affecting the safety of children must understand the dangers of lightning.

Watch for Developing Thunderstorms

Thunderstorms are most likely to develop on warm summer days and go through various stages of growth, development and dissipation. On a sunny day, as the sun heats the air, pockets of warmer air start to rise in the atmosphere.

When this air reaches a certain level in the atmosphere, cumulus clouds start to form. Continued heating can cause these clouds to grow vertically upward in the atmosphere into "towering cumulus" clouds. These towering cumulus may be one of the first indications of a developing thunderstorm.

The Lightning Discharge: Don't Be a Part of It

During a thunderstorm, each flash of cloud-to-ground lightning is a potential killer. The determining factor on whether a particular flash could be deadly depends on whether a person is in the path of the

lightning discharge. In addition to the visible flash that travels through the air, the current associated with the lightning discharge travels along the ground.

Although some victims are struck directly by the main lightning stroke, many victims are struck as the current moves in and along the ground. While virtually all people take some protective actions during the most dangerous part of thunderstorms, many leave themselves vulnerable to being struck by lightning as thunderstorms approach, depart, or are nearby.

An Approaching Thunderstorm: When to Seek Safe Shelter

Lightning can strike as far as 10 miles away from the rain area in a thunderstorm. That's about the distance you can hear thunder. When a storm is 10 miles away, it may even be difficult to tell a storm is coming.

IF YOU CAN HEAR THUNDER, YOU ARE WITHIN STRIKING DISTANCE. SEEK SAFE SHELTER IMMEDIATELY!

The first stroke of lightning is just as deadly as the last. If the sky looks threatening, take shelter before hearing thunder.

The 30-30 Rule

Use the 30-30 rule where visibilty is good and there is nothing obstructing your view of the thunderstorm. When you see lightning, count the time until you hear thunder. If that time is 30 seconds or less, the thunderstorm is within 6 miles of you and is dangerous. Seek shelter immediately.

The threat of lightning continues for much longer period than most people realize. Wait at least 30 minutes after the last clap of thunder before leaving shelter. Don't be fooled by sunshine or blue sky!

If it is cloudy or objects are obscuring your vision, get inside immediately. It is always safer to take precautions than to wait.

Outdoor Activities: Minimize the Risk of Being Struck

Most lightning deaths and injuries in the United States occur during the summer months when the combination of lightning and outdoor summertime activities reaches a peak. During the summer, people take advantage of the warm weather to enjoy a multitude of outdoor recreational activities.

Unfortunately, those outdoor recreational activities can put them at greater risk of being struck by lightning. People involved in activities such as boating, swimming, fishing, bicycling, golfing, jogging, walking, hiking, camping, or working out of doors all need to take the appropriate actions in a timely manner when thunderstorms approach.

Where organized sports activities take place, coaches, umpires, referees, or camp counselors must protect the safety of the participants by stopping the activities sooner, so that the participants and spectators can get to a safe place before the lightning threat becomes significant. To reduce the threat of death or injury, those in charge of organized outdoor activities should develop and follow to a plan to keep participants and spectators safe from lightning.

Indoor Activities: Things to Avoid

Inside homes, people must also avoid activities which put their lives at risk from a possible lightning strike. As with the outdoor activities, these activities should be avoided before, during, and after storms. In particular, people should stay away from windows and doors and avoid contact with anything that conducts electricity. People may also want to take certain actions well before the storm to protect property within their homes, such as electronic equipment.

Helping a Lightning Strike Victim

If a person is struck by lightning, medical care may be needed immediately to save the person's life. Cardiac arrest and irregularities, burns, and nerve damage are common in cases where people are struck by lightning. However, with proper treatment, including CPR if necessary, most victims survive a lightning strike, although the long-term effects on their lives and the lives of family members can be devastating.

Summary

Lightning is a dangerous threat to people in the United States, particularly those outside in the summer. With common sense, we can greatly reduce the number of lightning deaths. When thunderstorms threaten, get to a safe place, stay there longer than you think you need to, stay away from windows and doors and avoid contact with anything that conducts electricity.

Tuesday - Why do some clouds produce lightning and not others?

How Powerful is Lightning?

Each spark of lightning can reach over five miles in length, soar to temperatures of approximately 50,000 degrees Fahrenheit, and contain 100 million electrical volts.

Lightning Is A Random, Chaotic And Dangerous Fact Of Nature

At any given moment, there are 1,800 thunderstorms in progress somewhere on the earth. This amounts to 16 million storms each year! Scientists that study lightning have a better understanding today of the process that produces lightning, but there is still more to learn about the role of solar flares on the upper atmosphere, the earth's electromagnetic field, and ice in storms.

We know the cloud conditions needed to produce lightning, but cannot forecast the location or time of the next stroke of lightning. There are lightning detection systems in the United States and they monitor an average of 25 million strokes of lightning from the cloud to ground every year!

Lightning has been seen in volcanic eruptions, extremely intense forest fires, surface nuclear detonations, heavy snowstorms, and in large hurricanes, however, it is most often seen in thunderstorms.

A thunderstorm forms in air that has three components: moisture, instability and something such as a cold front to cause the air to rise. Continued rising motions within the storm may build the cloud to a height of 35,000 to 60,000 feet (6 to 10 miles) above sea level. Temperatures higher in the atmosphere are colder; ice forms in the higher parts of the cloud.

Ice In The Cloud Is Critical To The Lightning Process

Ice in a cloud seems to be a key element in the development of lightning. Storms that fail to produce quantities of ice may also fail to produce lightning. In a storm, the ice particles vary in size from small ice crystals to larger hailstones, but in the rising and sinking motions within the storm there are a lot of collisions between the particles.

This causes a separation of electrical charges. Positively charged ice crystals rise to the top of the thunderstorm, and negatively charged ice particles and hailstones drop to the middle and lower parts of the storm. Enormous charge differences (electrical differential) develops.

How Lightning Develops Between The Cloud And The Ground

A moving thunderstorm gathers another pool of positively charged particles along the ground that travel with the storm. As the differences in charges continue to increase, positively charged particles rise up taller objects such as trees, houses, and telephone poles.

Have you ever been under a storm and had your hair stand up? Yes, the particles also can move up you! This is one of nature's warning signs that says you are in the wrong place, and you may be a lightning target!

The negatively charged area in the storm will send out a charge toward the ground called a stepped leader. It is invisible to the human eye, and moves in steps in less than a second toward the ground. When it gets close to the ground, it is attracted by all these positively charged objects, and a channel develops. You see the electrical transfer in this channel as lightning. There may be several return strokes of electricity within the established channel that you will see as flickering lightning.

Thunder

The lightning channel heats rapidly to 50,000 degrees. The rapid expansion of heated air causes the thunder. Since light travels faster than sound in the atmosphere, the sound will be heard after the lightning. If you see lightning and hear thunder at the same time, that lightning is in your neighborhood!

Negative Lightning And Positive Lightning

Not all lightning forms in the negatively charged area low in the thunderstorm cloud. Some lightning originates in the cirrus anvil at the top of the thunderstorm. This area carries a large positive charge. Lightning from this area is called positive lightning.

This type is particularly dangerous for several reasons. It frequently strikes away from the rain core, either ahead or behind the thunderstorm. It can strike as far as 5 or 10 miles from the storm, in areas that most people do not consider to be a lightning risk area.

The other problem with positive lightning is it typically has a longer duration, so fires are more easily ignited. Positive lightning usually carries a high peak electrical current, which increases the lightning risk to an individual.

For more on the science of lightning, see the NOAA National Severe Storms Laboratory at http://www.nssl.noaa.gov/edu/ltg/

Wednesday - Lightning Safety Outdoors

Each year, about 400 children and adults in the U.S. are struck by lightning while working outside, at sports events, on the beach, mountain climbing, mowing the lawn or during other outdoor activities.

About 67 people are killed and several hundred more are left to cope with permanent disabilities. Many of these tragedies can be avoided. Finishing the game, getting a tan, or completing a work shift aren't worth death or crippling injury.

· All thunderstorms produce lightning and are dangerous. Lightning kills more people each year than tornadoes.

· Lightning often strikes as far as 10 miles away from any rainfall. Many deaths from lightning occur ahead of the storm because people try and wait to the last minute before seeking shelter.

· You are in danger from lightning if you can hear thunder. If you can hear thunder, lightning is close enough that it could strike your location at any moment.

· Lightning injuries can lead to permanent disabilities or death. On average, 10% of strike victims die; 70% of survivors suffer serious long term effects.

· Look for dark cloud bases and increasing wind. Every flash of lightning is dangerous, even the first. Head to safety before that first flash. If you hear thunder, head to safety!

· Blue Skies and Lightning. Lightning can travel sideways for up to 10 miles. Even when the sky looks blue and clear, be cautious. If you hear thunder, take cover. At least 10% of lightning occurs without visible clouds overhead in the sky.

The Single Most Dangerous Place

Outdoors is the most dangerous place to be during a lightning storm. When lightning is seen or thunder is heard, or when dark clouds are observed, quickly move indoors or into a hard-topped vehicle and remain there until well after the lightning storm ends. Listen to forecasts and warnings through NOAA Weather Radio or your local TV and radio stations. If lightning is forecast, plan an alternate activity or know where you can take cover quickly.

The U.S. lightning season is summer but lightning can strike year round! The Fourth of July is historically one of the most deadly times of the year for lightning. In summer, more people are outside, on the beach, golf course, mountains or ball fields. Outdoor jobs such as construction and agriculture, and outdoor chores such as lawn mowing or house painting are at their peak, putting those involved in danger.

Safety Rules

1. Postpone activities promptly. Don't wait for rain. Many people take shelter from the rain, but most people struck by lightning are not in the rain! Go quickly inside a completely enclosed building, not a carport, open garage or covered patio. If no enclosed building is convenient, get inside a hard-topped all-metal vehicle. A cave is a good option outside but move as far as possible from the cave entrance.

2. Be the lowest point. Lightning hits the tallest object. In the mountains if you are above treeline, you ARE the highest object around. Quickly get below treeline and get into a grove of small trees. Don't be the second tallest object during a lightning storm! Crouch down if you are in an exposed area.

3. Keep an eye on the sky. Look for darkening skies, flashes of lightning, or increasing wind, which may be signs of an approaching thunderstorm.

4. Listen for the sound of thunder. If you can hear thunder, go to a safe shelter immediately.

5. If you see or hear a thunderstorm coming or your hair stands on end, immediately suspend your game or practice and instruct everyone to go inside a sturdy building or car. Sturdy buildings are the safest place to be. Avoid sheds, picnic shelters, baseball dugouts, and bleachers. If no sturdy building is nearby, a hard-top vehicle with windows closed will offer some protection. The steel frame of the vehicle provides some protection if you are not touching metal.

6. Listen to NOAA Weather Radio. Coaches and other leaders should listen for a tone-alert feature during practice sessions and games.

7. If you can't get to a shelter, stay away from trees. If there is no shelter, crouch in the open, keeping twice as far away from a tree as it is tall.

8. Avoid leaning against vehicles. Get off bicycles and motorcycles.

9. Get out of the water. It's a great conductor of electricity. Stay off the beach and out of small boats or canoes. If caught in a boat, crouch down in the center of the boat away from metal hardware. Swimming, wading, snorkling and scuba diving are NOT safe. Lightning can strike the water and travel some distance beneath and away from its point of contact.Don't stand in puddles of water, even if wearing rubber boots.

10. Avoid metal! Drop metal backpacks, stay away from clothes lines, fences, exposed sheds and electrically conductive elevated objects. Don't hold on to metal items such golf clubs, fishing rods, tennis rackets or tools. Large metal objects can conduct lightning. Small metal objects can cause burns.

11. Move away from a group of people. Stay several yards away from other people. Don't share a bleacher bench or huddle in a group.

Lightning Safety on the Water

Before going boating, fishing,diving or enjoying other water sports or going out for business, check the forecast. If severe weather is predicted, stay home. If you must go out, take a radio and monitor forecasts. Return to shore as soon as possible if a storm is predicted. If you caught out in a storm, here's what do to:

· Divers are safer going deep for the duration of the storm or as long as possible. Lightning hits the surface and you are relatively safe if you dive.

· Get a lightning protection system for your boat or ship. See the Univerisity of Florida link below for more information.

· Stay in the center of the cabin if the boat is so designed. If no enclosure is available, stay low. Don't be a "stand-up human" lightning mast!

· Keep arms and legs in the boat. Do not dangle them in the water.

· Stop fishing, water skiing, swimming or other water activities when there is lightning or even when weather conditions look threatening. The first lightning strike can be a mile or more in front of an approaching thunderstorm cloud.

· Disconnect and do not use or touch the major electronic equipment, including the radio, throughout the duration of the storm.

· Lower, remove or tie down the radio antenna and other protruding devices if they are not part of the lightning protection system.

· To the degree possible, avoid making contact with any portion of the boat connected to the lightning protection system. Never be in contact with two components connected to the system at the same time.

Example: The gear levers and spotlight handle are both connected to the system. Should you have a hand on both when lightning strikes, the possibility of electrical current passing through your body from hand to hand is great. The path of the electrical current would be directly through your heart--a very deadly path!

· It would be desirable to have individuals aboard who are competent in cardiopulmonary resuscitation (CPR) and first aid. Many individuals struck by lightning or exposed to excessive electrical current can be saved with prompt and proper artificial respiration and/or CPR. There is no danger in touching persons after they have been struck by lightning.

· If a boat has been, or is suspected of having been, struck by lightning, check out the electrical system and the compasses to insure that no damage has occurred.

Here are some links on boating and lightning:

· University of Florida: Boating and Lightning

· Marine Lightning Protection Inc.

· National Ag Safety Database
What to do if someone is struck by lightning:

· Call for help. Call 9-1-1 or your local ambulance service. Get medical attention as quickly as possible.

· Give first aid. If the victim has stopped breathing, begin rescue breathing. If the heart has stopped beating, a trained person should give CPR. If the person has a pulse and is breathing, address any other injuries.

· Check for burns in two places. The injured person has received an electric shock and may be burned. Being struck by lightning can also cause nervous system damage, broken bones, and loss of hearing or eyesight. People struck by lightning carry no electrical charge that can shock other people. You can examine them without risk.

Stay Informed About the Storm

Listen to NOAA Weather Radio or local media for the latest severe thunderstorm WATCHES and WARNINGS. Severe thunderstorms are those storms with winds in excess of 58 mph or hail larger than 3/4 inches in diameter.

When conditions are favorable for severe weather to develop, a severe thunderstorm WATCH is issued.

Weather Service personnel use information from weather radar, satellite, lightning detection, spotters, and other sources to issue

severe thunderstorm WARNINGS for areas where severe weather is imminent. Remember, however, that ALL thunderstorms produce deadly lightning.

Thursday - Safe Shelters & Indoor Safety

What is a Safe Shelter?

A house or other substantial building offers the best protection from lightning. In assessing the safety provided by a particular structure, it is more important to consider what happens if the structure gets struck by lightning, rather than whether the structure will be hit by lightning.

For a shelter to provide protection from lightning, it must contain a mechanism for conducting the electrical current from the point of contact to the ground.

These mechanisms may be on the outside of the structure, may be contained within the walls of the structure, or may be a combination of the two. On the outside, lightning can travel along the outer shell of the building or may follow metal gutters and downspouts to the ground. Inside a structure, lightning can follow conductors such as the electrical wiring, plumbing, and telephone lines to the ground.

Avoid Unsafe Shelters!

Unless specifically designed to be lightning safe, small structures do little, if anything, to protect occupants from lightning. Many small open shelters on athletic fields, golf courses, parks, roadside picnic areas, schoolyards and elsewhere are designed to protect people from rain and sun, but not lightning.

A shelter that does not contain plumbing or wiring throughout, or some other mechanism for grounding from the roof to ground is not safe. Small wooden, vinyl, or metal sheds offer little or no protection from lightning and should be avoided during thunderstorms.

How Lightning Enters a House or Building

There are three main ways lightning enters homes and buildings: (1) a direct strike, (2) through wires or pipes that extend outside the structure, and (3) through the ground. Regardless of the method of entrance, once in a structure, the lightning can travel through the electrical, phone, plumbing, and radio/television reception systems. Lightning can also travel through any metal wires or bars in concrete walls or flooring.

Stay Safe While Inside

Phone use is the leading cause of indoor lightning injuries in the United States. Lightning can travel long distances in both phone and electrical wires, particularly in rural areas.

Stay away from windows and doors as these can provide the path for a direct strike to enter a home.

Do not lie on the concrete floor of a garage as it likely contains a wire mesh.

In general, basements are a safe place to go during thunderstorms. However, there are some things to keep in mind. Avoid contact with concrete walls which may contain metal reinforcing bars. Avoid washers and dryers since they not only have contacts with the plumbing and electrical systems, but also contain an electrical path to the outside through the dryer vent.

Remember Your Pets

You may want to consider the safety of your family pets during thunderstorms. Dog houses are not lightning-safe. Dogs that are chained to trees or chained to wire runners can easily fall victim to a lightning strike.

Protect Your Personal Property

Lightning also causes significant damage to personal property each year. In addition to direct strikes, lightning generates electrical surges that can damage electronic equipment some distance from the actual strike.

Typical surge protectors will NOT protect equipment from alightning strike. To the extent possible, unplug any appliances or electronic equipment from all conductors well before a thunderstorm threatens. This includes not only the electrical system, but also the reception system. If you plan to be away from your home when thunderstorms are possible, be sure to unplug unneeded equipment before you leave.

Summary of Lightning Safety Tips for Inside the Home

1. Avoid contact with corded phones

2. Avoid contact with electrical equipment or cords. If you plan to unplug any electronic equipment, do so well before the storm arrives.

3. Avoid contact with plumbing. Do not wash your hands, do not take a shower, do not wash dishes, and do not do laundry.

4. Stay away from windows and doors, and stay off porches.

5. Do not lie on concrete floors and do not lean against concrete walls.

Friday - Medical Aspects of Lightning

How Big A Problem Is This? Statistics

Lightning has been the second largest storm killer in the U.S. for the last 40 years, exceeded only by floods. A lightning strike can result in a cardiac arrest (heart stopping) at the time of the injury,

although some victims may appear to have a delayed death a few days later if they are resuscitated but have suffered irreversible brain damage.

According to Storm Data, a National Weather Service publication, the U.S. averages 67 reported lightning fatalities per year. Due to under reporting, the figures are more realistically about 100 deaths per year. Only about 10% of people who are struck by lightning are killed, leaving 90% with various degrees of disability.

ODDS OF BECOMING A LIGHTNING VICTIM

U.S. 2000 Census population 280,000,000
Odds of being struck by lightning in a given year (reported deaths + injuries) 1/700,000

Odds of being struck by lightning in a given year (estimated total deaths + injuries) 1/240,000

Odds of being struck in your lifetime (Est. 80 years) 1/3000

Odds you will be affected by someone being struck (Ten people affected for every one struck) 1/300

Who Gets Injured

While about one third of all injuries occur during work, workers compensation companies are often reluctant to acknowledge the injury or pay related medical expenses. About another third of injuries occur during recreational or sports activities. The last third occurs in diverse situation, including injuries to those inside buildings.

How Do Lightning Injuries Affect People?

Lightning tends to be a nervous system injury and may affect the brain, autonomic nervous system and the peripheral nervous system. When the brain is affected, the person often has difficulty with short-term memory, coding new information and accessing old information, multitasking, distractibility, irritability and personality change.

"Patients have difficulty in all areas that require them to analyze more items of information than they can handle simultaneously.

They present (appear) as slow because it takes longer for smaller than normal chunks of information to be processed.

They present as distractible because they do not have the spare capacity to monitor irrelevant stimuli at the same time as they are attending to the relevant stimulus.

They present as forgetful because while they are concentrating on point A, they do not have the processing space to think about point B simultaneously.

They present as inattentive because when the amount of information that they are given exceeds their capacities, they cannot take it all in."

Early on, survivors may complain of intense headaches, ringing in the ears, dizziness, nausea, vomiting and other post-concussion types of symptoms. Survivors may also experience difficulty sleeping, sometimes sleeping excessively at first and then only two or three hours at a time. A few may develop seizure-like activity several weeks to months after the injury.

Personality Changes / Self-Isolation

Many lightning victims may suffer personality changes because of frontal lobe damage and become quite irritable and easy to anger. People who wake up after the injury often do not have the ability to express what is wrong with them, may not recognize much, become embarrassed when they cannot carry on a conversation, work at their previous job, or do the activities that they used to handle.

As a result, many isolate themselves, withdrawing from church, friends, family and other activities. Friends, family and co-workers who see the same external person, may not understand why the survivor is so different. Friends soon stop coming by or asking them to participate in activities. Families who are not committed to each other break up.

Obviously, depression becomes a big problem for people who have changed so much and lost so much. Suicide is something almost all severely injured people have thought about at one time or another.

Occasionally, those who do not have access to medical care or who do not understand what is happening may resort to alcohol and other drugs, particularly those who have previously used these options. Family and friends of the survivor must remain supportive even though it may require an adjustment in their relationship with the survivor. An injury such as this affects the entire family, not just to the person hit.

Fatigue

Survivors often complain of becoming exhausted after only a few hours of work. This may be because tasks they used to do automatically now require intense concentration. Many return to work but find that they cannot do all of the activities required at their job.

Medical Testing

There are two kinds of medical tests:

· Anatomic tests take a simple picture (x-ray) or measurement (blood count)

· Functional tests show how something is working (PET, neuropsychological testing)

Sometimes function can be ascribed to the anatomic tests but often it cannot. The mental changes of a lightning survivor are functional (how the brain works) changes, not anatomic. Anatomic tests such as a CT scan and MRI are usually normal. More functional scans such as PET and SPECT may show changes but are hard to obtain due to their relative infrequency in medical centers.

To use an analogy: if an electric shock were sent through a computer, the outside case would probably look OK (similar to a photo or x-rays of the person), the computer boards on the inside would probably look OK and not be fused nor melted (CT, MRI for the person), but when you boot up the computer it would have difficulty accessing files, making calculations, printing, etc.

This situation is similar in a person with brain injury who has short-term memory problems, difficulty accessing and coding information, difficulty organizing output, etc.

More useful is a functional test of how a person's brain is working: a neurocognitive or neuropsychological testing. These tests are administered by a qualified neuropsychologist familiar with the literature in this area, not by a psychiatrist, and consist of a 6-8 hour battery of pen and paper tests including memory, IQ, organizational ability, and other how the parts of the brain are working kinds of tests. Survivors of lightning and electrical injury usually have a characteristic pattern of deficits.

Delayed Problems

Another common, often delayed, problem for some survivors is pain, also difficult to quantify and manage. The pain may not be from chronic intense headaches but may be in the back (perhaps from compression and disc injury from the intense muscle contractions which may throw a person several yards at the time of the injury), or in an extremity. Some may have nerve entrapment syndromes and a small number may eventually develop Sympathetically Mediated Pain Syndrome.

Sometimes the functional tests ordered are testing the wrong thing. An electromyogram (EMG) measures only the motor fibers, which are seldom affected by lightning injury. Smaller pain carrying nerve fibers are not tested by EMG so that a normal EMG means little when ordered for someone with pain. Likewise, the standard EEG primarily measure surface readings of the brain and misses seizure activity in several deeper regions.

Decreased libido and impotence are often reported.

Help Exists - Lightning Strike and Electric Shock Survivors, International, Support Group

An organization of tremendous help to survivors, families, physicians and other professionals is Lightning Strike and Electric Shock Survivors, International (LSESSI), a support group formed in 1989 by a lightning victim. LSESSI has printed materials, offers tremendous

support, networks survivors with others in their area, and provides an annual meeting where survivors come together for support and lectures from professionals who work with lightning and electrical survivors and their families. LSESSI can be reached at 910-346-4708, info@lightning-strike.org, or see their Website at http://www.lightning-strike.org/, or at P.O. Box 1156, Jacksonville, NC 28541-1156.

Four Factors Necessary for Recovery

The four most important factors in overcoming disability from lightning injury (or from any illness or major injury for that matter) are:

· Supportive family/friends network.

· Becoming your own advocate and learning as much as you can about this disability.

· A physician willing to listen, read, learn and work with the survivor and their family.

· A sense of humor.

Prevention

Far more important than treating survivors is preventing lightning injury. All of the people who helped make possible National Lightning Safety Awareness Week hope it will help you and your family learn how to avoid injury. Prevention is the KEY.

Ahhhh, wowee! "Secret ops!" [all very hush-hush]

> When is when I was still on Active Duty.

Which was when, 1974 to 1992?

> The rest is "For Me To Know An You To Find Out"...

Ho ho ho. Mighty warrior making with grade-school taunts.

OKAY...let's got down the line in the Almanac and see what
those "front page" hostile actions were:

1. The Vietanm War...was on-going in 1970 and ended 29 Apr 75 with the evacuation of all Americans from Siagon. And then had a brief restart with the capture of the US merchant ship Mayaguez. The USMC attacked a little island in "response."

2. The American Embassy in Iran was taken over in 1979 and several in a USAF-USA rescue force were killed before they could get started on that on 24 Apr 79. [too early for Stebie to have his "accident" and still serve]

3. A new USMC installation outside of Beirut, Lebanon was hit by a suicide truck bomber, killing many marines on 23 Oct 83. [was that when Stebie had his "accident?"]

3 (a) A South Korean airliner was shot down by USSR fighters on 1 Sep 83. No, not a USMC action; the U.S.Army recorded the air-air and air-ground USSR comms and that was played before the UN General Assembly.

4. The little island of Grenada was invaded by a combined U.S. military force on 25 Oct 83. [maybe THAT was the place that Stebie had his "accident?" too early]

4 (a) The cruise ship Achille Lauro was "shipjacked" by terrorists in 1985 but that didn't involve USMC.

4 (b) An Iraqi missled killed 37 on the USN frigate USS Stark on 17 May 87. All-USN, no USMC.

4 (c) The guided missle cruiser USS Vincennes shoots down an Iranian airliner on 3 Jul 88, killing 290. Nope, just USN "marksmanship" at work, no USMC.

5. U.S. forces invade Panama on 20 Dec 89, and eventually capture Manuel Noriega (courtesy of the U.S. Army). Now that MIGHT have been one of Stebie's hostile acts but too soon for his "accident."

6. Operation Desert Shield begins on 2 Aug 90 and Operation Desert Storm ends 27 Feb 91. Stebie doesn't brag about being in either Kuwait or Iraq or Saudi Arabia. USAF takes due credit for "Shield" and USA does most of "100 hour" ground war in "Storm" (see battle plan "73 Easting" at West Point).

7. UN combined force enters Somalia on 9 Dec 92 but pull out by 28 Feb 93. Stebie said he was NOT in Somalia.

7 (a) Branch Davidians catch fire on 28 Feb 93 but that is not a USMC action.

8. Combined U.S. force enters Haiti on 32 Mar 95 for peace-keeping purposes. [maybe Stebie tripped on something in front of a VA office in TN as a civilian and had his

"accident?"]

>> > Saying "My opinion is..." is one thing. That's black and white.
>>
>> Okay, now we understand...you no longer CLAIM "seven hostile
>> actions"...that is just YOUR OPINION.
>
> Nope.

Okay...it's just your BRAG. There's not enough for "seven" in
that list of "front page" news.

Were you shouldering your boresighted code key in your secret
ops you don't mention? Busy giving the "enemy" hell with your
morsemanship? Or weren't you simply doing REAR-AREA stuff and
polishing your own booties?

>> "Weekly evidence?" There are large-enough emergencies EVERY
>> WEEK in the USA that require amateur radio communications
>> assistance? [I don't think so...not even "almost"...]

Tsk, tsk. All we readers get is a BROKEN RECORD in here,
unintelligible sound punctuated by cursing clicks.

Was that also a "secret ops" that you can't talk about?

>> Do you acknowledge that the U.S. military runs MARS or is it
>> still YOUR OPINION that "MARS >>IS<< amateur radio?"
>
> It's always been my postition that MARS is run by DoD.

NOOOOOOO. You are ON RECORD - and in the archives of Google -
as having DENIED that. Tsk, tsk, tsk.

> It's ALSO been my position that my comments from the post you
>continue to inaccurately paraphrase from were that the same spirit of
>service that permeates Amateur Radio is part and parcel of the MARS
>programs as they are almost completely fleshed out >>BY<< licensed,
>civilian Amateur Radio operators.

"Completely?" Tsk, tsk. No again. MARS was originally begun as a very small-scale (and low budget) ARMY project back in 1925...more for publicity for the Army than any real radio improvement (Motorola did more of that in 1940 than any bunch of amateur volunteers). USA and USAF combined that activity after WW2 and gave it the name of MILITARY AFFILIATE Radio System. USN-USMC were last to join MARS in the sixties. If MARS is "completely fleshed out" by civilian volunteers, why are there USA and USAF MARS MILITARY Headquarter installations on MILITARY posts?

> No Amateur Radio = No MARS.

No Army experiment in 1925 and there never would have been a MARS. Sorry, you lost. MARS is NOT a player in any of the worldwide U.S. military tactical communications networks.

> It really is THAT simple.

The TRUTH is out there, but you keep retreating to your private internal FANTASY. Tsk, tsk.

You want to make good-and-sure that EVERYONE knows what a stain
you are on Veterans everywhere, don't you, Lennie.

Lennie Anderson...ex-Army radio mechaninc, and defiler of the
sacrifices of his "fellow" Veterans.

A scumbag.

A "military" club call is not a military station. It's hobby radio.

Yep. First he said, "Sorry Hans, MARS >>>IS<<< Amateur Radio."

Then there was a long period of defending that, followed by an even
longer period of backpedalling. Then he came up with a new plan, the
one below.

All archived.

> > It's ALSO been my position that my comments from the post you
> >continue to inaccurately paraphrase from were that the same spirit of

Nope.

Big snip of other actions.

I told you, Lennie...It's none of your business.

You want to claim I wasn't there and it's "just a brag"...Have
fun.

You'll be lying to everyone here AND yourself.

Also...get the details of the Mayaguez operation correct,
please...

The USMC provided ground troops on that mission...It was also
supported by the USAF and the US Navy.

The "USMC" attacked nothing...the United States did. The Armed
Forces, including the Marine Corps, ONLY move on the orders of the
CIVILIAN government that was put there by the electorate.

"Motorola" as a company didn't exist until 1947, Lennie, so how
did THAT happen?

Until 1947 "Motorola" was a "model" of car radio.

(Damn...bet THAT stings.....)

> If MARS is "completely fleshed out" by civilian volunteers, why

The "internal fantasy" here, is yours. That being that you know anything truly meaningful about Amateur Radio or any of it's associated programs.

The best I ever heard was the guy in the US who couldn't tell
from the accesn whom he was dealing with. The clue came when the help
desk guy told him the problem was because he didn't have sufficient
rupees in his account.

Personally I've had good and bad Indians and good and bad
USians.

If I can't understand either kind, I ask for someone who can
speak and troubleshoot in ubderstandable English.

Same shi+ different weekend, just like the Great Liberty Net. :)

Oh, did ya happen to hear yesterday, one of the Great Lib Net
'regulars' called into Alex Jones' live radio circus show on WWCR!

Folks it was a big time LAUGH RIOT! (I'll give y'all a hint, it was the
kookinschlong from MI who usually checks in later in the evening..
On and on he went with his tired old rant about he British Monarchy
and how all the worlds problems could be solved if the pope would
consecrate russia to some cat-o-lick saint...I think it was "the-virgin
our-lady-of-perpetual-motion" or something like that....)

The goofball would not f-n SHUT UP and Alex Jones *hung up on him*!

Now folks...when a paranoid loon like A.J. of Infowars hangs up on
you, you just know you're ready for a FREAKIN RUBBER ROOM....

I laughed so hard though I was gonna wet my BVD's!
If you missed it, you missed a classic paranoid shortwave radio moment.

"Its foulness was itself a desirable quality: the principle of
Dreckapotheke or "filth-medicine" dictated that the most disgusting

concoctions were the ones that did you the most good..."
-- "Cooking with Mummy", Sarah Bakewell (Today's quote of the day)

>truth...

"John Smith," ya gotta know da TERRITORY!

This place be da BLOG of the Mighty Macho Morsemen, serving
the nation through amateur radio!

First of all, only one in here apparently is "toothless," that
of the Cursing Tomb Sentinel who never shows any teeth in his
mighty photo portraits and "action" candids. [he of the
"seven hostile actions"]

Then we have the NO-Serving (except through morsemanship
which is their true representative of U.S. amateur radio)
who make jolly good laffs and pointy fingers at those of
us who have served our country in the military.

There are the apparently brain-damaged who are confused and
curse those of us who know the truth...because we have done
things not described by the official voice of radio, ARRL.

One of the greatest of the apparently brain-damaged was in
firm conviction of the ARRL Handbook as being "a standard
book on every [electronic] engineer's desk." He got very
upset when asked to prove that statement. Being a
"lecturer at the University of Hawaii" (instructor at a
junior college attached the university) he was unfamiliar
with engineering per se but was a champion of morsemanship
and once heard a ship "scream" through CW.

There have been many others, some no longer with us. They
all have variations on the common dreams of wish-fulfillment
and self-importance. They are a SERVICE TO THE NATION for
taking up the hobby of amateur radio, "proving it" by
pointing (heatedly) to the FCC's definition of "Amateur
Radio Service." Unfortunately they overlook the simple fact
that EVERY radio type and kind in Title 47 C.F.R. is called
a Service ("service" in Title 47 is a regulatory term).

They have their "academic certificates" in the form of FCC amateur radio license forms (suitable for framing) and thus are BETTER than PhDs. They are nearly all claiming they, as amateurs, are BETTER than professionals. Of course they are ...in their minds. Some have passed a morse code test at high rate and that is even GREATER than their "academic achievement" license certificates. They are RADIOTELEGRAPHERS! The nobelest achievement in their world. Never mind that actual jobs of radiotelegraphy are akin to chicken having teeth, they have FANGS of expertise and bite all who dare accost them in this newsgroup. They are CHAMPIONS, they are HEROES, they are a bit nuts with self-love, self-promotion, self-righteousness that doesn't stop.

"The truth is out there" is more than a TV show catchphrase. It is reality of the rest of the radio world. Few of these mighty macho morsemen have the courage to find out...they await their revelations in the pages of QST where they are spoon-fed what a few in Newington think is what they ought to know.

So, to coexist in this Morsemen's BLOG, one has to "agree" and kiss their figurative asses, take their unflogging cursing and denigrations. Morsemen RULE RADIO in this little BLOG. Morsemen must be fed a steady emotional diet of gratuitous (and unwarranted) praise for their mighty efforts and skills. THEY know all. Like already.

Get the picture? :-)

>
>http://www.alleged.com/radio/Harris/HF-Technology.pdf

"Alleged?!?" :-)

Anyone can go to www.harris.com, click on "tactical radio"
text-button on the main page and get to the page to select
their TWO tutorials on radio communication. Actually FOUR
since they have the same material in Spanish. :-)

Of course at the Harris site they require a "registry"
before the downloads can begin. One must be veddy
OFFICIAL about it all. :-) No problem for me, I got
both of them...the first volume is what I have on paper,
they second one I haven't seen. Well done material.

Newcomers ought to begin with "Now You're Talking"
shouldn't they? That's veddy official for amateurs.
We can't have any of that MILITARY comms stuff in here,
can we? Tsk, tsk, tsk.

Going directly to the Harris site should be best considering
that ARRL in Newington has Harris transmitters for W1AW.
Ed Hare made a point of that in here over three years ago?
If Newington has authentic Harris transmitters, the Harris
website is therefore OFFICIAL for all hams.

Everbody get all ionized about the mighty HF ionosphere.
Beep, beep.

I didn't get any farther than this to see what yet anotehr moronic anti-Amateur Radio rant this was.

Yet another validation of my claim that Leonard H. Anderson is a chronic, pathological liar.

"I am only here to civilly debte the Morse Code TEST issue."...Leonard H. Anderson.

Huge snip of obvious "I could be on HF right now but I'd rather insult people" rants......

> Morse code. The salvation of humankind, morse code is the only
> answer to immortality, truth, justice, and the American Way.

No, but right now, it's the ony way to an HF-authorized Amatreur Radio license in the United States, and is one of the simpilest, most easily employed modes in Amateur Radio communication.

I am wondering how THAT happened, Lennie.

There was NO company named "Motorola" until 1947.

Until then, "Motorola" was just the model name for car radios...No
company...

So...how did "Motorola" do anything for Army communications in
1940...?!?!

Steve, K4YZ

2438. "Professional Engineer" Lennie Gets MARS History And Present Day Mission Wrong

Lennie...WHY do you insist on obviously misquoting me when you just cut-and-pasted my LAST comments which were NOT what you tried to cite as a quote?

> MARS was originally begun
> as a very small-scale (and low budget) ARMY project back in
> 1925...(SNIP)

That was EIGHTY years ago, Lennie.

I am talking about MARS in the 21st Century...2005.

> (UNSNIP)....more for publicity for the Army than any real radio
> improvement...(SNIP)

It wasn't about "publicity". It was about utilizing the assets of thousands of licensed Amateurs to help a military communications service that was itself then less than 2 decades old at that time.

> (UNSNIP)...(Motorola did more of that in 1940 than any bunch
> of amateur volunteers).

Already slapped you around on this one...but hey, hate to miss another opprotunity to showcase YOUR errors. There was NO company named "Motorola" in 1940.

> USA and USAF combined that activity
> after WW2 and gave it the name of MILITARY AFFILIATE Radio
> System.

No, actually...It was known as the "Military AMATEUR Radio System" after WW2. It wasn't until later that the "Amateur" was changed to "Affiliate".

> USN-USMC were last to join MARS in the sixties. If
> MARS is "completely fleshed out" by civilian volunteers, why

> are there USA and USAF MARS MILITARY Headquarter installations
> on MILITARY posts?

I didn't say "completely".

I said "almost".

And those posts are on military posts for the same reason HQ
CAP-USAF is on a military "post"...The military is in control of the
program, it's "civilian" nature notwithstanding.

However just like CAP, if MARS's civilian volunteers take a hike,
the program is kaput.

> > No Amateur Radio = No MARS.
>
> No Army experiment in 1925 and there never would have been a
> MARS. Sorry, you lost.

How can I "lose" something YOU don't have correct, Lennie...?!?!

I have NEVER, not ONCE, questioned the origins of the MARS program.

You are ONLY correct that had the Army not initiated the program
in 1925, that MARS today would likely not exist today...

However it DOES exist, but as a totally different entity than the
one started in 1925.

The roots of the program are 80 years old. However the leaves
that bloom today >>ARE<< today's products...not those of 80 years ago.

> MARS is NOT a player in any of the
> worldwide U.S. military tactical communications networks.

Who said it was? >>MY<< comments have been about MARS's modern day
role as it pertains to it's Amateur Radio membership, emergency
communications, etc.

It seems to me that you are seriously lacking in a real-world,
modern day understanding of what MARS is TODAY...

You can obviously quote from the manuals OK, but have NO
understanding of what the words mean.

Time to move forward, Lennie...with the rest of us...

Steve, K4YZ

2439. And Incase Lennie Doubted that MARS and Amateur Radio are a "Service to the Nation..." MARS Chief Says Otherwise

Newsgroup: rec.radio.amateur.policy

Source record: 109722

QUOTE from Chief Army MARS:

MARS has grown in all of the services throughout the world. It relies on civilian and military MARS members to be available in case of emergency or disaster to provide communications support. At such times, MARS needs all of the support it can provide. Amateur Radio, collectively with MARS, has made its mark in American history. Each year provides new evidence of the important role it plays in the service of the nation.

UNQUOTE

Since Lennie only believes that "reality" springs from URL's, he can go to:

http://www.asc.army.mil/mars/history.htm

...to get it from the horse's mouth.

Will Lennie now tell us that Chief MARS was assaulted, dragged off and drugged by ARRL PsiWar ops and forced to make this statement under duress...?!?!

Outstanding. Where/how do you find all these kids?

> What do you do to promote the hobby? Perhaps you have not made an effort
> to promote the hobby to them, teach and mentor them.

That's true although over the years I have managed to bring a few kids
into the hobby when the opportunity presented itself. But I don't go
out looking for candidate kids. Not everyone is cut out to
recruit/teach kids anything on an ongoing basis and I'm one of those.

> Do something make a contribution, make a difference.

Welp let's see here . . I recently led an effort which raised a bit
over $2,000 for the ARRL Spectrum Defense Fund part of which was my
check for a hundred bucks. Helping preserve the bands for the kids,
etc. Does that count?

Must have been the Galvin(sp) company, the ancestor of Motorola.

Absolutely correct, Mr Casey.

From: http://www.hitechwireless.cc/html/history.html

To wit:

The company was founded by Paul V. Galvin as the Galvin Manufacturing
Corporation, in Chicago, Illinois, in 1928. Its first product was a
"battery eliminator," allowing consumers to operate radios directly
from household current instead of the batteries supplied with early
models. In the 1930s, the company successfully commercialized car
radios under the brand name "Motorola," a word suggesting sound in
motion. During this period, the company also established home radio and
police radio departments; instituted pioneering personnel programs; and
began national advertising. The name of the company was changed to
Motorola, Inc., in 1947.

>I was gonna say that!!! (but, you did say it better!)

Thank you...but it's only a summation of what has gone on in
here for years, said by others as well as I. :-)

>But glad you clarified, certainly is close to my take on the whole
>thing--you think you might be the only one who has ever told them the
>truth--of how it all looks in others eyes? If not, you suppose the
>problem is that they didn't believe the first guy? <grin>

Actually there were dozens in here since 1996 trying to
point out the TRUTH, but the die-hard morsemen would have
none of it, preferring their own wonderful fantasies. Most
simply got tired of wasting their time trying to argue
against those (sometimes irrational) "believers."

One of the redoubtable fanstasizers was Jim Kehler, KH2D,
on Guam. He went so far as to "found" the fake organization
known as "No SSB International" to counter the established
No Code International (NCI) organiztion. NSI had very good
web page design but was hampered by their "leader," Kehler,
possessed of a zealot's blunt axe of words. NSI no longer
exists as any effective group. NCI continues. NCI leaders
helped to bring about the revision of S25 for international
amateur radio standards at WRC-03...along with the IARU...
even though hampered by the resistance of ARRL at the time.
Kehler had some kind of illness and moved to the contiguous
USA a few years ago. He had a website of his own (may still
have) and kept digging and digging at those code-tested he
did not like...in rather not-nice terms such as "brain-dead
old farts." :-)

The international maritime world selected GMDSS as THE
distress-and-safety automatic calling system a few years
ago, abandoning the old, romantic stalwart 500 KHz distress
frequency with its "CW" only capability. The USCG has
stopped monitoring that 500 KHz frequency. Some in here
(notably W0EX in Missouri, probably SK now) tried to tell
all "it wouldn't work!" by repeatedly quoting some retired
mariner (who was oblivious to the fact that the international
maritime folks had already tested the system and found that
it does work!). The FCC has added GMDSS commercial licensing
class categories (a few years ago) in Title 47 C.F.R. and
COLEMs do the testing for those (rather simple) written

license tests.

The ICAO (International Civil Aviation Organization) has abandoned "CW" necessity for long over-water flights and air carrier navigator-radio personnel were "downsized" (laid-off, given their pension monies, waved bye-bye). ICAO switched to voice on HF for such tasks.

Maritimers on the shipping lanes now use SSB voice and various TORs (Teleprinter Over Radio) on HF for long-distance communications. More expeditious for them, less error-prone than "CW." River and harbor communications switched to VHF voice decades ago for water-borne radio communications.

Outside of some long-ago-installed automatic station identifiers using preset ID beepers, the only users of "CW" in the USA are the amateur radiotelegraphers. Members of the ARS (Archaic Radiotelegraphy Society) do some remarkable rationalization on "why" all MUST test for morsemanship to gain HF privileges: "It is the SECOND-most popular mode;" "it is needed so all can communicate with third-world hams;" "it is a 'traditional' and 'basic' mode;" "they need to know it so that all can communicate during extreme emergencies (perhaps when space aliens invade the earth)." The old, tired, trite "CW gets through when nothing else will" still surfaces even though first coined in the 1930s. Put into terms of reality, the morsemen had to test for it and therefore all newcomers have to do it (the "jump through the hoops" hazing syndrome)...nya, nya. :-)

A sub-group of the mighty macho morsemen are the ex-service-members (military service that is) who demand a militaristic structure of defined rank-status-privilege with the "best" privileges naturally bestowed on those with the highest rank. [they self-define themselves as "deserving" of it] All of the military mighty macho morsemen are anal to a point of near-insanity on strict, unbending legalities with implied capital-offense punishment to be immediately applied to the poor souls who look for change in regulations. They "believe" all the usual political propaganda statements to be (almost) words of God and gleefully pin on their "deserved" medals for engaging in a hobby activity that requires federal regulation (due to the nature of EM physics).

All that fuss and furor over a HOBBY activity! None may say nay to the divine-right of ham rule by the mighty macho morsemen! :-)

>More lies, Nursie? Where's your documentation?

Fritz, this self-styled "radio history expert" doesn't have much
in the way of documentation for anything.

Galvin Manufacturing Co. was founded in 1928 by brothers Paul
and Joe Galvin, buying out a small company that made "battery
eliminators." In Chicago, IL, long their corporate home.

In 1930 Paul Galvin coined the company logo "Motorola." Galvin
had gotten into making automobile radios. The MOTOROLA logo
had become more common in the pre-WW2 electronics industry than
"Galvin." Not an easy task to do that right when the Great
Depression had begun in the USA.

On an invite from the Army to observe radio use in manuever
exercises, Paul Galvin and a few high staff expressed their
thoughts that they could improve small-unit radio capability.
The Army invited them to try. The result was the SCR-536
"handie-talkie" which was contracted for in 1940. Although
working on HF and using a battery two-thirds the size of the
one-hand radio, it came into widespread military use just
prior to the USA's entry into WW2. Even the Secret Service

used them in protecting FDR in 1940.

Galvin Mfg had already gotten into making vehicular radios for police prior to 1940 and Paul Galvin offered Dan Noble (then working for Link) a position to improve police radios with FM. As the USA was forced into WW2, and the production of the first HT was ramped up, Noble did most of the design of the first "walkie-talkie", the SCR-300/BC-1000 manpack transceiver that operated at VHF, not HF. The first operational units of that were delivered in 1943.

All of the above can be found in Paul Galvin's biography (which I had in hardbound form). Some of it is on the MOTOROLA corporate website.

Galvin Mfg also got into the little-publicized, but massive quartz crystal unit fabrication during WW2, winding up as the central "control point" for the efforts of up to 60 large and small quartz crystal unit fabricators. Quartz crystal unit production had the second highest priority during WW2 in the USA, second only to the Manhattan Project. Total production between 1942 and 1945 was one million units per month. [source: Documentation on the Corning Frequency Control website, mainly a paper by a retired PhD who worked on them and published after WW2 in an engineering journal]

Galvin Manufacturing Co. changed its corporate title to MOTOROLA in 1947. That was just pro forma action since the MOTOROLA logo was now well known in the industry and had been in existance for 17 years. In 1949 MOTOROLA established their Arizona semiconductor division and became one of the largest of the semiconductor makers. The corporate name of MOTOROLA and the later stylized M in a circle are both familiar to anyone involved with radio communications or semiconductors in the electronics industry. MOTOROLA is a familiar name seen by TV watchers or football games and NASCAR races. MOTOROLA is well-known among public safety communicators since the brand has been out in public since 1930.

You have to understand that Gonad the Librarian just doesn't have anything worthwhile in electronics industry experience. He wasn't born when MOTOROLA became a legal corporate identity. All he really wants to do in here is FIGHT with those he doesn't like. He is not good at that since he doesn't have either the knowledge or the experience beyond his amateur radio certificate (suitable for framing). For example, he will not know that ON Semiconductor is a separate corporate structure spun off of Motorola Semiconductor, which itself was established in 1949...but, he does know the year in which Galvin Manufacturing legally changed its name to MOTOROLA, did not move from its Chicago location in the process and only changed a lot of company letterheads and forms. So,

he tries to FIGHT, FIGHT, FIGHT, attempting some "humiliation"
of others that he perceives as his "enemies." :-)

Some wordplay on corporate identities is to be expected since
Stebie da Wundermarine can't really top those of us who have
been IN radio and electronics longer than he has been alive.
His attempts at wordplay using (to him) foreign phrases do
not work well, especially when he misspells the French "nes pas"
as "nes pax" (exchaning a French word with Spanish word for
"peace"). He does not recognize peace. A pun that is not,
as Yoda might say.

He should eat his gefilte fish and latkes in hopes that his
digestion might improve by not shouting PUTZ! at his "enemies"
so much. Kosher he is not. Oy, gevalt.

Yes.

Well, you cannot disguise the fact that the over 60 crowd just don't
have the energy or enthusiasm as the teenage to 30 crowd--or the fact
that these younger people are actively engaged in the research,
development and production phases of electronics. Why they may
effectively hang on limiting the hobby--this cannot not go on
indefinitely...

And, while it is true only those with a wet diaper can truly appreciate
change--change is in the wind... the next decade should provide a dip
in number of licenses which has never been seen before... this is only
the beginning...

Warmest regards,
John

OK wogie, name the time and frequency for some CW practice. I generally
start out at about 35 wpm.
>
>>from the FCC.

You can't even show ARRL press releases or any other proof of your wild
claim that I received a letter from the FCC fatboy two-test. Come on,
post proof of your claim curtains boy. Hard to do when you don't even
know who I am isn't it?

You? Who is this 'you' wogie that you claim frabraicted evidence. There
was no need for anyone to frabricate any evidence two-test, everyone
knows you were jamming other stations on 20 meters. That's why you had
to retest to keep your license, curtains boy.
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!
So again wogie, you deny you got a letter from the FCC about you causing
malicious interference on 20 meters? HAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!
>
>
>
>>>And your proof is????????? How do YOU personally know that
>>>nothing was fabricated?

There was no need to fabricate something you were already doing two-test.
>
>

>

Again, who is this 'you' you are blabbering about wogie?

>chronic, pathological liar.

...the sun sets on the Tomb of the Unknown Solder as a solitary figure in a patch-adorned flight suit slowly paces out his lonely path of anger, J-38 in one hand, bayonetted USMC soldering iron in the other. Pre-recorded marine marches softly fill the air, interspersed with dits and dahs of a few PCTA morsebirds not yet extinct. The Tomb of the Unknown Solder is a lonely place, deep in the valley of neuroses, anger, and frustration. The single sentinel counts cadennce to himself, muttering "flux you, flux you" between the slow steps. His fists are clenched, eager to do bottle but only sipping a cup of unkindness. It is sad but the sentinel at the Tomb of the Unknown Solder keeps going. He does not know why and that is the tragedy. The sun slowly sets on the Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

Steve,

Please don't mention 1947.

I just had a birthday last month and I am feeling *very* antiquated LOL.

I have been unable to learn new concepts, such as measuring your antenna impedance with a volt-ohm meter.

I still cannot understand the concept of a class A amplifier being 50% efficient (taught by the U.S. Navy in 1967).

I had a problem even as a youngster when a teacher told me that there was a complex formula for finding resonant frequency, but L times C was close enough. I was 14 at the time and already apparently suffering the beginning of Altzheimer's.

I admit to having some problems with The Calculus but managed some months ago to borrow a book and get back a bit of what I had forgotten. Unbelieveably, The Calculus appears to work, but how can it when my algebra is so poor that I am unable to transform F=L*C into F=1/(6.28*sqr(L*C))?

I can only assume that I have memorized many things in error. I don't generally use calculators like many do to make change (I caught an error one time a kid did use a calculator), so I suspect my basic addition, subraction, multiplication, and division have not disappeared. Obviously, however, my idea of equations must be in error.

Many folks state that pi is equal to 3. Well, that still doesn't work for resonant frequency = L times C.

So, in any case, Steve, welcome to the club. You are likely as brain dead as I.

73 from Rochester, NY
Jim AA2QA
ps - try to avoid these kind of threads LOL

2458. Need a meaningful definition of "hostile action"

> Steve, K4YZ

Steve, there sure is lots of protesting and denial in your post, and lots of claims of "not headline news" hostile actions. Len would be pleased. Very pleased.

Can you give us some examples of what you consider hostile actions?

Probably not. OK, I'll give some.

Scenario 7: You are heading to the "actionable area" to train USA personnel at a RADAR site. The hills are painted green and have very large numbers on them. You reach a checkpoint manned my Host Nation Army. They point guns in your face and tell you "No." They apparently have no other vocabularly.

Is that a hostile action?

Scenario 6: Same general area. You are deployed to an -exercise- location. A round of artillery explodes about 200 meters away from your tent.

Is that a hostile action?

Scenario 5: You are involved in on a meals on wheels operation. As you travel through a primary city, you see a vehicle paralleling your convoy, and it has it's 50 cal pointing directly at you.

Is that a hostile action?

Scenario 4: Same location. While "in-garrison" you receive fire from a nearby building which overlooks the compound. The bullets go wide.

Is that a hostile action?

Scenario 3: Same location. It is New Year's Eve, Dec 31, 1992 and you see rockets going back and forth outside your compound. Thirty cal fire kicks up sand in front of you.

Is that a hostile action?

Scenario 2: Same location. Later in January, while moving toward the just opened chow hall, it is hit by a single 30mm round.

Is that a hostile action?

And Secnario 1: Okinawa. The "A" NCOIC of a MARS shop gets short sheeted by his troops because he doesn't know dink about comms.

Is that a hostile action?

In article <2tSdnRLgJvfEXz3fRVn-gQ@gbronline.com>
Cmd Butt Cornholer of little boys <m...@that.moc> whined:

> I never claimed you (more lies)

No you just "claim" to have a FCC 1st class commercial license
and a pilot's license, all imaginary licenses. No proof, so they
must be lies.

> Like you know (more lies and backpedals)

Like you know about even trying to pass the Extra exam, let's
face it, you can't.

> Like I sa

You're repeating yourself, you senile old fuck. Go have your son
who has the "power of attorney" over your old useless dumb ass
give you your meds and change your colostomy bag again.

> Never claimed

No, you never claimed to be intelligent, either.

> I see, in other words you can't copy code.

And where do you pull that completely dumbassed statement from?
Roger can copy 13 wpm code and proved it when he passed his
General exam.

> (more imaginary inept delusions)

Poor Butt Cornholer, always a loser.

> > Besides, you send like a fucking lame elephant......
>
> If I can't find my key

Probably not, it's as chap as the rest of your equipment. I've
heard your sending, it sounds like a lame elephant.

>Make up you crack damaged mind curtains boy.

"Make up you crack damaged mind"?????

LOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOL!!!!!!!!!!!!!

Learn English, dumbfuck.

> I haven't backpeddled about anything,

Spell much, you "backpedaling" fool?

> I have show proof of your letters

"I have show proof"? BWHAHAHAHAHAHAHAHAHAHAHA

You've "shown" what a fucking illiterate dumb son of a bitch you
are, too!

> from the FCC.

No, you only have shown you can copy and paste ARRL press
releases.
I have posted the actual letters, they have to be real, since
you initially posted them to the newsgroups.

>Show proof of this letter you calim

"calim"???? My my, is Butt Cornholer a bit upset?

> And I ask you again to show proof of how you claim I don't
have a pilot
> certificate.

And yet you can't provide proof you do have one.
Not without exposing who you really are.

> Where is (my bitch jumping through hoops like I always make
him)

Jump,my bitch, jump. At least you spelled "claim" right this
time.

> So show (much whining and sniveling)

Jump bitch, jump!

> Same old (poor bitch boy,jump boy, jump)

Same old backpedals and unsubstantiated bullshit by Nursie
deleted.

> So wogie, you deny you were sent a letter about your malicious

I try and stay on subject and not correct senders typos. That is a job for
professors like Churchill that thinks he is a Indian.

To comment however.....if you could do 13wpm and had a real W or K callsign
we wouldn't be having this discussion...because you would understand how it
is. However you don't. Your loss.

So is any formula for antenna workings. You can't have a absolute formula
if the results are varied by external elements out of ones control. Such as
heigth above ground, nearby objects, length of grass. IQ of operator.
etc.

John, there is hope. I took a look at the actuarial tables shortly
after joining this newsgripe, and it look like they are working in our
favor. We can help it work by not turning into the very type of
amateur that the tables are currently removing from hamdom.

Tsk. It took the League long enough to see the "duhhhh..." :-)

They've had adequate numbers all along. They've been seeing
only what they want to believe.

As of the end of 2004 the League had only 140 thousand members.
That's about 20 percent of all U.S. amateur licensees. [from
QST advertising webpage]

Haynie has said that a "survey" showed fully 1 in 5 hams
actually got on the air? Oh, my, a remarkable coincidence
in the percentage of League membership. :-)

[we now pause to have all loyal league believers vent their
rage against those who defile 'their' organization...]

The mighty macho morsemen cannot conceive of that. They are
immortal. They RULE. [they've said as much...]

However, "energy and enthusiasm" is a function of both individual
genes and mental outlook. "Enthusiasm" in half-century-old state-
of-the-art techiques and practices should be consigned to niche
nostalgia places, not kept as federal regulations.

Many of the stratification crowd seem to hang onto their
"enthusiasm" of their young days as if it were a lifeline to
some imagined fountain of youth promising that they will
remain younger than springtime by holding to old paradigms.
[Rodgers and Hammerstein could do a great musical opera on
that if Rodgers wasn't a silent (piano) key and Oscar wasn't
a silent pen...but it wouldn't play in Newington] [well,
maybe a version of "Carousel" since these olde-fahrts keep
going around and around and around...]

My own viewpoint is different. By virtue of being born when
I was, my lifetime has seen the comming of the solid-state
era and the definite decay of vacuum tube technology...that
bringing a virtual explosion of different applications, new
and exciting SOCs (Systems On a Chip)...plus a whole new set
of passive and semi-active components and ways to hold them all
together. Technology-wise that is truly WONDERFUL and
MARVELOUS. We all have the capability of high-speed data and
imagery communications internationally, 24/7, no worries about
the condition of the ionosphere...all for less than $2000 in
today's dollars to get a "mainframe" computer on a desk and
a year's subscription to an ISP. Buy-sell-trade, do personal

banking, keep family in touch at all times etc., etc., etc. My personal enthusiasm on the technology just grows and grows from keeping in touch with the new developments and seeing the products (some delivered to my door after electronic ordering). I'm not going to see the end of even if the mortal world sees my end. That's the way of humans being.

Others, the stratification crowd, the staunch defenders of the status quo, demand a HALT to progress, NO CHANGE. Keep all nice and tidy and belonging just the way it was when they were young. Psychological reassurances of their "safety." Denial of the fact that they ARE getting on. Denial of the fact that other, younger people MIGHT be interested in doing this ham radio hobby thing. Oh, some of them whip up some adrenaline and do lip-service to old, trite phrases of "helping youngsters" and all that but the MUST keep THEIR playground in their order. NO changes allowed. Most don't help, don't bother to learn how to help.

Why would a young person of today WANT to study morse code just to communicate on HF? Other than being in a "ham family?" The Internet opened to the public 14 years ago and most of the world is connected to the net. A shrink wrap CB transceiver is available over the counter for less than $100, complete with antenna and microphone. A pair of FRS hand-helds costs only $50 maximum and permits 5 mile two-way talking with isolation via digital mode. A cell phone with a built-in camera costs less than $100 and can communicate anywhere within range of a cell site...to the rest of the telephonic world. One in five Americans have cell phone subscriptions. Need to send documents across country fast? Go to chain drugstores and use their FAX machines. All sorts of quick communications possibilities for all today. COMPETITION OF INTEREST. Competition of quality and dependability. And all that hasn't touched on the OTHER advantages the younger folk have today, things that are entertaining, interesting, mind-holding.

In truth, some young folks LIKE certain old things. That's been true in every generation. The best-ever stagecoaches are built today...in either California or Arizona (depending on your guild location)...for movie and TV use. Horseback riding is for personal pleasure today. It isn't a requirement to survive as it once was. When we want to send a telegram today, it is done by data modes probably through fiber-optic lines, transmission at relatively unlimited speed, securely and without error. No one has to go to the old train office and have some manual telegrapher translate it and send it at 10 to 20 words per minute. That was for times older than a century ago.

Today's ham can purchase a top-of-the-line HF transceiver, fancy antenna and tower, peripheral gizmos up the gazoo, all for less than $5000. They get rock-solid frequency stability and read-out

of same down to 10 Hz increments...Digital Signal Processing, "VFO 'split'" with frequency memories, sharp crystal filters to reduce QRM and QRN to a minimum...even operate it through a PC! None of that was available in a single package a half century ago. But, the olde-fahrts can sit back and dictate all MUST test for the 161-year-old "technology" skill of morse code on that HF. Incredible dichotomy. Incredible hypocrisy.

Actuarial tables will manifest themselves. The mighty macho morsemen WILL have their morse keys pried out of their cold, dead fingers. Your prediction will come to pass. Perhaps much sooner than they expected. RIP.

Haynie's mistake is in assuming that because he might have trouble
passing it, many others would also have difficulty.

Most hams I've encountered aren't locked to old technology. They're using the latest equipment available to them. They are not, however, obliged to discard any technology simply because it isn't the newest and latest.

> Many of the stratification crowd seem to hang onto their
> "enthusiasm" of their young days as if it were a lifeline to
> some imagined fountain of youth promising that they will
> remain younger than springtime by holding to old paradigms.

You haven't yet explained what constitutes "the stratification crowd". Most hams I've encountered are enthusiastic about amateur radio. They enjoy it immensely. I don't expect you to understand.

> [Rodgers and Hammerstein could do a great musical opera on

> the condition of the ionosphere...

...unless we're trying to use HF radio.

> all for less than $2000 in
> today's dollars to get a "mainframe" computer on a desk and
> a year's subscription to an ISP.

Really? You have a "mainframe" computer on your desk?
The only thing close to a "mainframe" computer that I've used is the
Wang VS and it was a "mini". I'd have had to have had a pretty big desk
for it.

> Buy-sell-trade, do personal

Yep, long bows, crossbows, gunpowder--there's simply no end to it.

> Others, the stratification crowd, the staunch defenders of the
> status quo, demand a HALT to progress, NO CHANGE.

That would seem to be a pretty large fib on your part.

> Keep all
> nice and tidy and belonging just the way it was when they were
> young. Psychological reassurances of their "safety." Denial

> NO changes allowed.

> Most don't help, don't bother to learn how to help.

Then again, you'd have absolutely no way of knowing it that is the case.

> Why would a young person of today WANT to study morse code just
> to communicate on HF?

Uhhhh....to communicate with others who are using the mode or to learn
something different than his peers or maybe, just because it is a
qualification for obtaining an HF amateur radio license.

> Other than being in a "ham family?"

Other than being in a ham family, what?

> The
> Internet opened to the public 14 years ago and most of the world
> is connected to the net.

No, most of the world is assuredly not connect to the internet.

> A shrink wrap CB transceiver is available
> over the counter for less than $100, complete with antenna and
> microphone. A pair of FRS hand-helds costs only $50 maximum and

What's your point, Leonard? Do you own stock in Cobra?

> A cell phone with a built-in camera costs less than $100 and can
> communicate anywhere within range of a cell site...to the rest
> of the telephonic world.

Neat. Even if I don't have one, I have a telephone. With it, I can
also communicate to the rest of the "telephonic world".

> One in five Americans have cell phone
> subscriptions.

One in five American hams belong to the ARRL.

Need to send documents across country fast? Go
> to chain drugstores and use their FAX machines.

Why would I need to do that? I'd just use my desktop "mainframe"
computer and FAX with it.

> All sorts of
> quick communications possibilities for all today.

Yeah?

> COMPETITION OF INTEREST.

COMPETITION OF INTEREST, what?

Competition of quality and dependability.

What about them?

> And all
> that hasn't touched on the OTHER advantages the younger folk have
> today, things that are entertaining, interesting, mind-holding.

Yeah--hip hop, computer porn, drugs, piercing body parts and video
gaming come to mind.

> In truth, some young folks LIKE certain old things.

Then somewhere, there is a young person who must like you.

> Today's ham can purchase a top-of-the-line HF transceiver, fancy
> antenna and tower, peripheral gizmos up the gazoo, all for less

None of that was available a quarter-century ago.

> But, the olde-fahrts can sit back and dictate all MUST test for
> the 161-year-old "technology" skill of morse code on that HF.

Some of 'em are still using human speech to communicate. That dates
back thousands and thousands of years.

> Incredible dichotomy. Incredible hypocrisy.

Those don't seem to qualify as sentences.

> Actuarial tables will manifest themselves. The mighty macho
> morsemen WILL have their morse keys pried out of their cold,
> dead fingers.

But actuarial tables being what they are, they'd indicate that this will
be one of those things you aren't likely to be around to see. In fact,
you'll likely miss out on amateur radio altogether.

Let me see if I have all of your "facts" straight:

1) there is no problem
2) old farts are cutting edge techs
3) one look will tell you how "progressive" amateur radio is
4) everything just looks wrong, it is really right
5) code is important
6) ARRL is wrong
7) Haynie is wrong
8) FCC is wrong

... yeah, right!

Well, some of them couldn't, anyway.

The same is true of some hams in every license class, and
has been true for some hams at least as long as I've been aware of ham
radio.

But I'm not one of those that W5JBP was speaking about.

Since I got my ham license 37-1/2 years ago (October 1967, age
13), I've always been able to pass the tests for the license
I hold. Since 1970 (age 16), that's been the Extra.

Every couple of months I do an online practice test just to
make sure.

Morse is a ghost language spoken by old men when they do their rants and name their illnesses--much to the dismay of the vital and youthful hams...

The new 5 WPM test for all classes will guarantee you will NOT be speaking morse to any young men--they will pass the 5 WPM to get the extra license... then you will never see them again--except on phone and modem...

Been there, done that. :-)

Been to Fort Huachuca, too, (Hq Army MARS, off to one side of
the Military Intelligence School).

> ...to get it from the horse's mouth.

Stebie got the wrong end of his "horse" again. Tsk, tsk. :-)

He should have made some kind of remarks about the Buffalo
Soldiers. Fort Huachuca is the original home of them.

>Silly Gunny, no one disputes what the Chief of Army MARS has stated.
>They only dispute what you claimed, "Sorry Hans, MARS >>>IS<<< Amateur
>Radio." Hi! Hi, hi!!!

Poor Stebie, even more brain-dead than Jim Hampton surmised.

All the fuss and furor over MARS was already done when Stebie's
famous statement ["Sorry, Hans, MARS >>IS<< amateur radio"]
was made. Stebie is trying to misdirect by pointing a finger
at "my error." Poor guy doesn't realize that when he points
his finger, four other fingers are pointing at HIM! :-)

Heh heh heh. Stebie CUTS AND PASTES from the government web
sites! [he didn't used to like that!] However, the "statement

of mission" is just worded in glorious self-illumination typical to ALL unit or political organization statements. Stebie wants to take all of those absolutely LITERALLY like a good little soldier. Such shining lights will reflect off the medals he bought for himself at www.grunt.com or similar. He likes to soak in that light and pretend being the big hero.

MARS is doing an okay job for the military. Keeps civilians occupied through their volunteerism and the military hopes that will reflect good will towards the military. MARS *was* good back in the Vietnam War era for phone patches to folks back home. But...that was THIRTY YEARS AGO! [Vietnam War ended for the USA in 1975] The U.S. Army even made that direct statement on the Army's Center for Military History.

MARS is a part of SHARES (SHAred RESources), a loose organization of 2500 U.S. government HF radio sites. It serves as a good radio liason to other government agencies now. That has been demonstrated in the SHARES/MARS exercises dubbed "Grecian Firebolt" and has been written up in the Army Communicator, a quarterly for Signal personnel (and some contractors). The M in MARS is definitely MILITARY and the A stands for AFFILIATE and not "amateur." Army MARS stations are manned by professional warfighters. Volunteer civilian units can work with those stations but only under Army control, including operations outside the ham bands, not inside them.

Does the U.S. military need ham-assisted phone patches now? Rarely. With the expansion of the DSN and the Internet, troops in Afghanistan and Iraq can communicate with home directly through many of the personal computers fielded in quantity in both places...and found on larger warships...and certainly found on nearly every military post today. In many cases the military makes actual telephones available for direct talking to family and friends back home...through the DSN, through the Internet via VoIP. Such MARS activities are good for troop morale.

MARS was never designed/implemented/devised to be a PART of mainstream military communications. It isn't now. The U.S. military long ago organized their communications through planning and adapting and reformulating networks, systems, equipment to handle all the Command-Control-Communications (the first three Cs of "C4I") they need. That works. It has always worked. Been there, done that...even controlled the transmitter that FEC MARS used (on a third-priority term), one out of three dozen used for the REAL communications.

All of the above I wrote today has been written by me in here before. Apparently Stebie is way too selective in what he looks for on Google searching. :-)

[Stebie is now going to compose a "YOU LIE, YOU LIE!" message]

Screum.

MARS *was* good back in the Vietnam War era for phone patches to folks back home. But...that was THIRTY YEARS AGO! [Vietnam War ended for the USA in 1975] The U.S. Army even made that direct statement on the Army's Center for Military History.

MARS is a part of SHARES (SHAred RESources), a loose organization of 2500 U.S. government HF radio sites. It serves as a good radio liason to other government agencies now. That has been demonstrated in the SHARES/MARS exercises dubbed "Grecian Firebolt" and has been written up in the Army Communicator, a quarterly for Signal personnel (and some contractors). The M in MARS is definitely MILITARY and the A stands for AFFILIATE and not "amateur." Army MARS stations are manned by professional warfighters. Volunteer civilian units can work with those stations but only under Army control, including operations outside the ham bands, not inside them.

Does the U.S. military need ham-assisted phone patches now? Rarely. With the expansion of the DSN and the Internet, troops in Afghanistan and Iraq can communicate with home directly through many of the personal computers fielded in quantity in both places...and found on larger warships...and certainly found on nearly every military post today. In many cases the military makes actual telephones available for direct talking to family and friends back home...through the DSN, through the Internet via VoIP. Such MARS activities are good for troop morale.

MARS was never designed/implemented/devised to be a PART of mainstream military communications. It isn't now. The U.S. military long ago organized their communications through planning and adapting and reformulating networks, systems, equipment to handle all the Command-Control-Communications (the first three Cs of "C4I") they need. That works. It has always worked. Been there, done that...even controlled the transmitter that FEC MARS used (on a third-priority term), one out of three dozen used for the REAL communications.

All of the above I wrote today has been written by me in here before. Apparently Stebie is way too selective in what he looks for on Google searching. :-)

[Stebie is now going to compose a "YOU LIE, YOU LIE!" message]

Screum.

So? What's the big deal? If I had to be retested I'd simply memorize the question pools like everybody else does these days. The EE-types wouldn't even do that, they's just sit down and pass it. Like Haynie said "passing a ham exam does not make you an engineer." Which is to say that passing the writtens isn't much more than a traditional rite of passage. Always have been for that matter.

READ THE ARTICLE!

I read the article. Now you tune around the bottom ends of the bands for a reality check.

Haynie said:

1) "It's not that Amateur Radio is dumbed down," he said. "People like me have failed to keep up, and if you look in your heart, you're going to say the same thing."

2) "...if you want people to come out of that examination room in here to be able to design circuits--you're in the wrong hobby."

3) "I said, if we come down on the side of code, we're going to make the no-code people mad, and if we come down on the side of the no-code, we're going to make the code people mad..."

4) "...he predicted that the Commission will never reinstate higher code speed requirements as some have requested."

5) "The FCC is not going to go back to 13 and 20 words per minute, and you can take that to the bank," he predicted. "It's not going to happen." The Commission went with the single 5 WPM requirement because it was "sick and tired" of dealing with medical waivers, he said.

Although he has become a pretty smart "politician" and "diplomat"--it is obvious code is given very little if any importance. Now you can argue his words anyway you like--but you can't find one word of his which places ANY importance on it... He HAS said old amateurs have lost sense of reality, that is right there in no. 1) ... argue that anyway you like--into looking like a fool...

I'm afraid you're right about that. Corruption is rampant in most, if not all, governments. A good start may be making *all* corporate political contributions illegal...and none of this business of making contributions in your employee's names, either. It's a start.

Not so. I've worked several licensees in the CW November Sweeps who gave their year of license as 2000 and AFTER. I currently know several people who have passed their 5wpm so they never have to take the test again but continue to work diligently to get up to both conversational and contest speeds.

Dammit Len, your reading comprehension really is badly deteriorated. See a specialist quickly.

What Haynie said was that the survey revealed that "more than one-fifth of new amateur licensees never get on the air."

Hello, John

There are more than a few folks that can send and receive cw faster than a lot of folks can type. I am not talking 20 words per minute here, nor am I talking a leisurely 30 words per minute.

Of course, cut and paste doesn't count (and I've had a few college grads tell me that is how they did some of "their" papers LOL. Future CEOs, I'm sure. Enron and the like).

I'd be interested in an SSB contact on 24 GHz via moonbounce. 85 watts. That might prove interesting.

All said and done, there are modes that can do it better (PSK comes to mind) - but most won't and cw is one that can. It doesn't mean it is the best, but ... again ... there are a number of ops that can send and receive cw faster than a lot of folks can type. And if some enjoy it, why worry? It is like arguing that country-western music is terrible. Not all would agree.

May I assume that you cut and paste very quickly? ;)

Not "all." :-)

Having a Tech license is part of their JOB. The JOB is
basically PR work, keeping civilians feeling good about
NASA (which needs all the public support it can get).

Astronauts have all the NASA comms they need, don't need
any ham bands via HTs to do their primary mission. :-)

...the sun sets on the Tomb of the Unknown Solder as a solitary figure in a patch-adorned flight suit slowly paces out his lonely path of anger, J-38 in one hand, bayonetted USMC soldering iron in the other. Pre-recorded marine marches softly fill the air, interspersed with dits and dahs of a few PCTA morsebirds not yet extinct. The Tomb of the Unknown Solder is a lonely place, deep in the valley of neuroses, anger, and frustration. The single sentinel counts cadennce to himself, muttering "flux you, flux you" between the slow steps. His fists are clenched, eager to do bottle but only sipping a cup of unkindness. It is sad but the sentinel at the Tomb of the Unknown Solder keeps going. He does not know why and that is the tragedy. The sun slowly sets on the Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

John, Hans just doesn't understand. When he gets like that
he is extremely touchy-grouchy.

Regardless, the League still doesn't have but about 1 out of
every 5 U.S. amateur radio licensees as members. The League
can't seem to "raise" that much. A couple years ago they
got to about 23%, then it fell off.

Tsk, tsk, master super chief of all. Didn't you notice a
little QUESTION MARK I put at the end of my sentence?
You quoted it and STILL didn't see it! YOUR problem, not
mine. Read it again and RECOGNIZE the punctuation.

Sigh.

> What Haynie said was that the survey revealed that "more than
> one-fifth of new amateur licensees never get on the air."

Go uncork a fifth and go for stupor-ville, mighty super
master chief. You will feel better...but not in the morning.

Good luck on this one, now...

Well, "John", let's take 'em in reverse order in honor of your top posting style:

8. The FCC has been wrong on numerous occasions.

7. Jim Haynie has been wrong more times than the FCC.

6. The ARRL varies between getting it right and getting it wrong.

5. Morse code is important to me.

4. Everything may look wrong to you and Len Anderson; that doesn't mean that it is.

3. I wrote nothing about "one look".

2. When you use the "old farts" term, I peg you as just another twenty-year-old with fifty years of experience.

1. I don't see any huge problems for amateur radio.

Now to a guy like Leonard Anderson, a guy who claims several decades of interest in amateur radio but who has never taken the first step toward actually obtaining an amateur ticket, I'm sure that amateur radio is in an awful pickle.

I'm still reserving judgement on your motivations.

He's right on the money. But many hams are *not* like him, yes?

> 2) "...if you want people to come out of that examination room in here
> to be able to design circuits--you're in the wrong hobby."

Of course, that's been obvious to everybody else around here since
somebody first started selling spark rigs out of a catalog. Is it
somehow imperative that hams must be able to design current-tech
circuits or the sky will fall on the hobby? What's your point?

> 3) "I said, if we come down on the side of code, we're going to make

Ah, but then he continued ". . so the best thing for us to do is be
evenhanded, and make everybody mad," Haynie said, tongue-in-cheek. "And
I think we're doing a good job of it." "

In other words the League has ducked out of the code teat war this time
and put in the hands of the FCC.

Do you have a problem with that?? I sure don't.

Your "selective snippages" are as a bare minimum a bit of comic relief.

> 4) "...he predicted that the Commission will never reinstate higher code

> like--into looking like a fool...

Smitty I'm about 99% in agreement with what Haynie stated, I'm not arguing his words at all, I'm arguing YOUR words. Which are goofy, naive attempts to twist reality around which we all see thru. You're quite terrible at this game you're trying to play John but hang around here awhile and watch how the real pros harpoon reality in this group . . maybe you'll get better at the game.

. . speaking of reality . . in the end when all the dust settles CW is everywhere on the bands today and it's gonna still be on the bands long after you and I have both expired. Get comfortable with it my good man because neither of us can do a bloody thing about it one way or another. THAT's the real reality.

And by the way what's your callsign?

Good night.

You just dismissed the fact that Haynie is seeing a real problem here,
he is beginning to tell hams to stop acting like such immature jerks and
get with the program--you take these words are turn them into him giving
you an "Atta Boy!"
If you are fool enough to believe that you will have to... such denial,
avoidance and BS has stagnated us to the point where all there are, are
a bunch of guys out there too old to be of interest to QSO with--the
young guys know that and you can tell them different till the cows come
home--it will not change one thing...
I am 52 and most are too old for me... long winded rants about
yesteryear and such is a real turn off to this guy... I cringe when I
see the expressions on the young mens face who hear it on my demos of
radio...
You sit there thinking all is well--I can tell you are past anything but
an argument for maintaining status quo...
You really mean to tell me you feel the bands out there are "congested?"
Tell someone without a radio--they just might believe you...
We both hear Haynies words you think he is saying, "Good Job Guys!" I
challenge that all right, I hear him saying, "Get with it old fools!!!"

Haynie mentioned you in no 1), someone who won't admit they are killing
the hobby... you aren't anything but a self-centered jerk with a big ego
and self-opinion, and you are here because this newsgroup is full of
'em, you guys have all busted your arms in an over-zealous state to pat
each other on the back. You look like a group engaged in a
group-masturbation of egos--I can assure you at 52 I find it makes me
ill--I can't even imagine how it must disgust younger men....
Too long you have been coddled with kind words till with even your worst
behavior you expect them...

Warmest regards,
John

Whew...Any windier than that and Goodyear might invite you over to
the flying field next time the blimp gets a little limp...

> My own viewpoint is different. By virtue of being born when
> I was...(SNIP)

Give you no more "perspective" on modern day Amateur Radio than
anyone else who can read about it in a magazine or on-line.

That IS the limits of your experience in Amateur Radio.

> Others, the stratification crowd, the staunch defenders of the
> status quo, demand a HALT to progress, NO CHANGE.

There goes Leoand H Anderson with more of his chronic lying.

Leonard H Anderson IS the only one in this forum who expresses
that ideal. Not a single person in this forum, including myself, has
EVER expressed a "NO CHANGE" position.

> Keep all
> nice and tidy and belonging just the way it was when they were
> young.

...or we could all time-travel ourselves back to post-war Japan to
be rear-area radio mechanics of the 50's...Like Lennie does so often.

> Why would a young person of today WANT to study morse code just
> to communicate on HF?

Most that I've had contact with lately don't want to get on HF on
ANY mode...They are enthralled with EchoLink and the digital modes, all
of which can give them nearly the same worldwide communications
capability taht another $750 in equipment could get them.

(This is yet another of those "practical experiences" that
licensed Amateurs have that Lennie doesn't...)

> A pair of FRS hand-helds costs only $50 maximum and
> permits 5 mile two-way talking with isolation via digital mode.

BWWWWHHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHHAHAHAHAHAHAHAHA
! ! ! ! ! !

MAYBE if one of them is on Racho Palo Verdes and the other on
Crestline, Lennie....

Everyone else is limited to about a 1/4 to 1/2 mile, despite the
advertising hype to the contrary.

(Even MORE "practical experience" that Lennie lacks....)

> A cell phone with a built-in camera costs less than $100 and can
> communicate anywhere within range of a cell site...to the rest
> of the telephonic world.

Uh-huh...

For $30 to $50 a month...Plus other fees depending on who you
contract with. Skip a payment, and the only "pictures" you'll be
taking are with a disposable Wal-Mart 35mm camera.

> Today's ham can purchase a top-of-the-line HF transceiver, fancy
> antenna and tower, peripheral gizmos up the gazoo, all for less
> than $5000.

Actually for less than that.

> But, the olde-fahrts can sit back and dictate all MUST test for
> the 161-year-old "technology" skill of morse code on that HF.

> Incredible dichotomy. Incredible hypocrisy.

None of us is "dictating" that, Lennie.

Your NON-licensed commissioners in Washington and Gettysburg are
doing that.

There's your "dichotomy", Lennie.

> Actuarial tables will manifest themselves. The mighty macho
> morsemen WILL have their morse keys pried out of their cold,
> dead fingers. Your prediction will come to pass. Perhaps
> much sooner than they expected. RIP.

I've been praying for a stroke on Lanark Street. Maybe sooner
than later?

You are a silly old man, I am indeed licensed... but that should make little difference... that argument is not what I am, but what the hobby is and where it is going, you are a crafty old buzzard always anxious to side track facts into a gutter of personal attacks and rants on someones present status--too me--you just look like a damn street smart punk which knows a few tricks--and dirty underhanded ones at that...

They've been trying to get the smell out ever since, too.

> > ...to get it from the horse's mouth.
>
> Stebie got the wrong end of his "horse" again. Tsk, tsk.

Ahhhhhhhhhhhhhh.....

You're calling the Chief of MARS as a horses' patoot, Lennie?

> He should have made some kind of remarks about the Buffalo
> Soldiers. Fort Huachuca is the original home of them.

Was that in ChiefMARS comments? I missed it.

> >Silly Gunny, no one disputes what the Chief of Army MARS has stated.

> was made. Stebie is trying to misdirect by pointing a finger
> at "my error." Poor guy doesn't realize that when he points
> his finger, four other fingers are pointing at HIM!

I don't point a finger, Lennie.

And it is "your error"...Proven with the comments of ChiefMARS.

> Heh heh heh. Stebie CUTS AND PASTES from the government web
> sites! [he didn't used to like that!] However, the "statement
> of mission" is just worded in glorious self-illumination typical
> to ALL unit or political organization statements.

NOW I SEE!

When LENNIE can quote from a website that supposedly substantiates
his "position", it's "absolute truth".

When it lands on his head, it's "glorious self-illumination"...

Uh huh...Riiiiiiiiiiiiiight.

Only a couple weeks ago you were citing from the same sources...

No "glorious self-illumination" comments then, eh, Lennie....?!?!

> Stebie wants
> to take all of those absolutely LITERALLY like a good little
> soldier. Such shining lights will reflect off the medals he
> bought for himself at www.grunt.com or similar. He likes to
> soak in that light and pretend being the big hero.

Nope..."Pretend(ing) to be the big hero" is your schtick, Lennie...

Like all those posts where you pretend to have been "somebody" by
having been in a unit that had KIA's a few years earlier...Years that
you weren't even in the service...

> MARS is doing an okay job for the military. Keeps civilians
> occupied through their volunteerism and the military hopes
> that will reflect good will towards the military. MARS *was*
> good back in the Vietnam War era for phone patches to folks
> back home. But...that was THIRTY YEARS AGO! [Vietnam War
> ended for the USA in 1975] The U.S. Army even made that direct
> statement on the Army's Center for Military History.

Ahhhhhhhhhhhhhhhhh...even MORE enlightenment...

Again you cite things that were "THIRTY YEARS AGO", but not what's happening "TODAY"...

Of course you ALSO cite what happened at "ADA" in the 50's as if it happened yesterday, but then attempt to chide Amateurs for discussing what happened SIX years ago.

> MARS is a part of SHARES...(SNIP)

Yep.

And that doesn't detract ONE BIT from the TITLE of the thread...Actually, it ADDS to it.

> Does the U.S. military need ham-assisted phone patches now?

Is "ham-assisted phone patches" ALL that the Armed Forces expects from MARS...?!?!

Nope.

And Lennie wouldn't know that, considering his experience level in MARS and/or Amateur Radio.

> MARS was never designed/implemented/devised to be a PART of
> mainstream military communications. It isn't now.

Nope. It wasn't. Who here said it was? I sure didn't.

> All of the above I wrote today has been written by me in here
> before. Apparently Stebie is way too selective in what he
> looks for on Google searching.

Nope.

What I point out is that you denigrate and deny the services and achievements of MARS and Amateur Radio services alike.

ChiefMARS has to answer to higher-ups in the "MILITARY" chain of command.

> [Stebie is now going to compose a "YOU LIE, YOU LIE!" message]

I don't need to yell them out, Lennie. Your mistruths are usually glaring enough to stand out on their own...

> LenStillDoesn'tKnowAthingAboutMARSorAmateurRadioAnderson@ieee.org

The "wordplay" was yours, Lennie.

And regardless of when I was born, I can read.

YOU said "Motorola" was doing all these great things for the Army
in "1940".

"Motorola" was the name of a radio...not the name of a
company...in 1940.

Details, Lennie....Facts....

> His attempts at wordplay using (to him) foreign phrases do
> not work well, especially when he misspells the French "nes pas"

Apologize for what, Brain...?!?!

Motorola was NOT a company in 1940. THAT is a fact. References
provided.

Lennie was WRONG.

Let's see what LENNIE does, other than provide yet another verbose spindance to hide behind his error...

OOOOOOOOOOOOOOOOOOPS! TOO LATE! He already did that!

It was no "slam thread".

Lennie got his ego in front of his common sense again...Wasn't paying attention. But he CLAIMS to be a "professional".

Obviously THIS professional got his "facts" wrong. I just showed him his error.

Not likely.

> but that should make little difference...(SNIP)

It makes a LOT of difference.

It establishes from what point of reference that you make your
assertions. It's called an "informed opinion".

Lennie is an example of a lot of fluff without experience. He
"knows" a lot from what he cuts and pastes...no more...no less...

Just like you so far.

> (UNSNIP...that argument is not what I am, but what the hobby
> is and where it is going...(SNIP)

And you know this?

So far you've offered nothing but hit and run, anonymous quips with
little or no substantiation of your "opinions".

> (UNSNIP)...you are a crafty old buzzard always anxious to
> side track facts into a gutter of personal attacks and rants on someones
> present status...(SNIP)

And so far you've done/said nothing except to make your OWN "gutter
of personal attacks". So what's the difference?

> (UNSNIP)....--too me--you just look like a damn street smart punk
> which knows a few tricks--and dirty underhanded ones at that...

Lessee...You're anonymous...apparently unlicensed...not a bit of
substantiation of ANY assertion...

Yep..."damn street punk" WITHOUT the "smarts"...

An absolute lie, Brian.

Why does Brian P Burke insist on lying in a public forum?

I am wondering who he's allegedly talking to, then.

Those problems don't seem to be manifest here.

> If you are fool enough to believe that you will have to... such denial,
> avoidance and BS has stagnated us to the point where all there are, are
> a bunch of guys out there too old to be of interest to QSO with--the

> home--it will not change one thing...

Thankfully not all of us live our lives by reliving tales of
post-WW2 Japan rear area radio stations.

> I am 52 and most are too old for me...

Then don't talk to them.

Funny...I've never had any of these alleged 'gastric QSO's' like
some here have alleged are the bane of HF phone.

One of the benefits of not getting on HF phone very often, I
guess! Not much challenge in "just talking".

> long winded rants about
> yesteryear and such is a real turn off to this guy...

Then hang out elsewhere.

> I cringe when I
> see the expressions on the young mens face who hear it on my demos of
> radio...

Hear what?

> You sit there thinking all is well--I can tell you are past anything but
> an argument for maintaining status quo...

What status quo?

> You really mean to tell me you feel the bands out there are "congested?"

At times they are. At others, they're not.

> Tell someone without a radio--they just might believe you...
> We both hear Haynies words you think he is saying, "Good Job Guys!" I
> challenge that all right, I hear him saying, "Get with it old fools!!!"

Personally, I say stop top-posting. Really makes it hard to follow
your point.

And by the way, to reiterate another's question, "what's your
callsign?"

Folks like W5JBP have been saying that for a long time.

They're right, of course.

> and get with the program

Which "program", though?

>--you take these words are turn them into him giving
> you an "Atta Boy!"

Not me.

> If you are fool enough to believe that you will have to...
> such denial,

There's a lot more than "a bunch of guys too old to be of
interest" - but you have to go where they are.

> I am 52 and most are too old for me... long winded rants about
> yesteryear and such is a real turn off to this guy...

I am 51, been a ham more than 37 years. In all that time, there
have always been the "old buzzards" doing what you describe.
There have also always been folks who are a lot different,
regardless of age.

> I cringe when I
> see the expressions on the young mens face who hear it on my
> demos of radio...

And how do you do these demos? You show them voice operating,
right? 75, 20, 2 meters?

Try expanding the horizons to other modes, like PSK31, Pactor, and
(gasp) Morse Code. Different worlds, different people.

> You sit there thinking all is well--I can tell you are
> past anything but

> an argument for maintaining status quo...
> You really mean to tell me you feel the bands out there
> are "congested?"

Depends what bands, modes and when.

They realize a no-win situation when they see it. Also, the ARRL
BoD has a wide range of opinions on the issue, so they came up

with a compromise and went on to other issues.
>
> Do you have a problem with that?? I sure don't.

> > he said.
>
> This is astounding new info or what??

Not at all.

Frankly, I'm simply amazed that FCC didn't just dump Element
1 two years ago when the treaty changed at WRC 2003. All they
needed was a one-paragraph Memorandum Report and Order saying
that they'd dealt with the issue back in 2000, and pending further
changes, everybody who passes any of the written tests
for a US ham license gets code test credit too. Or some such verbiage,
just like they did when they waived the code sending test.

But FCC didn't do that, even after getting a pile of proposals
to do so. In a month or so it will be two years and there isn't
even an NPRM out yet. If they go the entire NPRM cycle, it
could be a year or more before the rules change - *if* they
change.

> > Although he has become a pretty smart "politician"
> > and "diplomat"--it is
> > obvious code is given very little if any importance.

By whom?

The code *test* may be dropped, (actually I think it's very likely) but
Morse Code itself is a very big part of amateur radio in 2005.

> > Now you can argue
> > his words anyway you like--but you can't find one word of

Tune down the low ends of the HF bands, in the evenings when most
of the younger folks aren't tied up with work, school, kids, etc.
There's a lot more going on than the voice modes on the high ends.

Lots of "olas" in those days. Radiola, Audiola, Victrola.
Only Motorola survives.

Kinda like the "tron" and "istor" words.

> The MOTOROLA logo
> had become more common in the pre-WW2 electronics industry
> than "Galvin."

There was no Motorola company then.

> On an invite from the Army to observe radio use in manuever

I've seen them, better known as the BC-611.

Do any of them have the Motorola logo? Or do they say "Galvin"?

> Noble did most of the design of the first
> "walkie-talkie", the SCR-300/BC-1000 manpack transceiver that

What do you suggest? That the seniors quit ham radio?

> I am 52 and most are too old for me...

. . that's obvious but not for the reasons you think it is . .

> long winded rants about
> yesteryear and such is a real turn off to this guy...

Too damned bad about that, they have the licenses and they're allowed
to chit chat about history if that's their interest. If you don't like
it fine, twist the big knob on the front of your radio and go somewhere
else which is what I do.

> I cringe when I
> see the expressions on the young mens face who hear it on my demos of
> radio...

Yeah yeah, the kids I hung out with on the corner a half century ago
didn't think much of ham radio either.

> You sit there thinking all is well--I can tell you are past anything but

> challenge that all right, I hear him saying, "Get with it old fools!!!"

You're simply an irrational/incoherent waste of bandwidth and time.
'Bye.

Nope.

The ONE thing you corrected me on (and I acknowledged, which is a
trait you are wont to do on errors...) was about the licensure of the
director of AFMARS.

Period.

Saying that you weren't wrong doesn't make it so, Brain...

Stop lying.

"Gonad the Librarian"...?!?!

Lennie has got nerve making such anal-ogies considering his
propensity for trying to out-trivia everyone else in this forum on
numerous issues.

As for "worthwhile experience" in the "electronics
industry"...Well, I just didn't need any to pull the carpet out from
under you, Lennie...

Sheeeesh.

[meaningless ravings flushed]

Your comments might make sense if I were named "Lloyd," or posted on the-forum.us web boards. Since neither is true, you remain confused as always.

Let's see: You've recently managed to get kicked off Ovis, Stratuswave, Altopia, COTSE, AOL, Googlegroups, and now <cough> NIM Busters - itself a collection of losers. Prior to that, the FCC retested you because of illegal behavior in the ham bands.

If someone among us is to be regarded as the ultimate loser, you have managed to accumulate all of the necessary credentials for that title. Now, even the losers think you're a loser and are kicking you out of their groups.

Congratulations, Uber Loser.

At 52 I am one of the "young guys here." The "amateur hobby radio'ists" here have managed to chase away most if not all--down to the very last REAL young guy away.

They do this with personal attacks on those of differing opinions. They deny facts and figure. Like a bunch of shyster accountants they bend figures to attempt to argue for the status quo.

Like a bunch of lawyers they attempt to bend the words of Haynie into an "Atta Boy", while in reality he chastises them for ill behavior and damaging the hobby.

There are no young hams here for a darn good reason--few have a skin thick enough to have staying power. And then, you have those who just have better things to do....

These guys who have stagnated the hobby are attempting to maintain the status quo even as the hobby dips to low numbers, cannot achieve even minor new band allocations and are ineffective in even limiting BPL--broadband over powerline--simply because they have managed to put the amateur radio hobby so far on the back burner most have forgotten of its existence... and this they are quite happy with, clear bands so they can rag chew with buddies over rants and medical problems is what they really seek...

If you are in your 30 and under you will have a hard time staying here--unless you like turning your nose brown...

Warmest regards,
John

My real name and call are held to protect the innocent (or guilty as you prefer.)
I have had my station inspected a couple of times, and passed with flying colors I might add, since my fellow amateurs frowned on me chatting with truckers and general "undesirable types" on the Chicken Band...
I am very familiar with hams finding out your call and attempting to use the FCC as their private police... SOME are full of dirty tricks...

Warmest regards,
John

On one hand they really didn't have any choice, enough was enough. On another hand that's the way things work in democracies.

> Frankly, I'm simply amazed that FCC didn't just dump Element

My guess is that the FCC didn't move on the code test when the ITU dropped the requirement because they had a major restructuring in mind back then and decided to bundle any changes in the code test into the overall restructuring package per the Incentive Licensing restructuring. Which is typical regulatory "behavior". Or they had already decided to retain the code test into the future. With 98% of the world's population still subject to code tests and given the small number of countries which have abandoned the code tests it just might be that the decision to retain the code test here was quietly carved in stone 4-5 years ago. Conversly though the waivers problem is still out there . . .

The NPRM is obviously enroute whether it shows up later this year or sometime next year doesn't matter much and I expect it to be a real gooder. Gonna be some nuclear explosions in this NG when it finally does get published. Heh.

Even in the phone bands the U.S. geezer nets are usually well up the bands to accomodate the Generals, there's very little of that sort of operating in the Extra/Advanced segments.

That is true to a fair extent.

My own personal assessment of Haynie's talk is that he is correct to a large extent.

The olde questions were not harder, they were different. Someone posed a couple of likely candidate old time q's to me, and it took me just a few minutes to find the answers.

I think the main problem with the older hams being "better" than folks like me is the ability of many middle-aged and older men to get incredibly worked up about almost nothing, forecasting doom from inconsequential things.

I've chatted with a 96 y.o. Ham on PSK31 who certainly doesn't fit that "Evil olde Hamme" description. He'd just gotten a new laptop, converting to XP from Win2k. A fine gentleman, and not afraid of learning and doing new things. It's not all bleak.

Let us hope he continues to beat those tables.

That happens to a lot of 'em. Odd, that, I think keeping up is a lot of the fun!

> 2) "...if you want people to come out of that examination room in here
> to be able to design circuits--you're in the wrong hobby."

I wonder if that ever was the case in the old days. Somehow I doubt it.

> 3) "I said, if we come down on the side of code, we're going to make

> of reality,

Actually, that staement isn't a quote, it is filler from the writer. He may have said some things about older hams, but it is a long way from telling them they have lost sense of reality.

> that is right there in no. 1) ... argue that anyway you
> like--into looking like a fool...

Just sounded close to a quote. That's the problem. While I agree with what Haynie has said, I think you are injecting your own opinion into what he said.

I've been a ham for 6 years now. I came up through the new system. An awful lot of the oddballs on the air appear to have been licensed for quite a while, and I assume they are tested to more than 5wpm. Yeah, someone will probably point out the old waiver system. But I doubt that every kook and jammer got a waiver.

The new guys and gals are not any worse than the old ones.

Lets take a look at your spelling ability wogie. Was second grade too
hard for you?

"aditting"

"abckpedals"

"shreeched"

"stuid"

"heared"

"assuslted"

"experieince"

"abouve"

"Cosast"

"mebership"

"retqards"

"coordinbator"

"Realy"

"Nitoiced"

"Becasue"

"Licence"

"Convienince"

"Myabe"

"occurance"

"srtuggling"

"definatrely"

"delapidated"

"picutre"

"permenatly"

"Arest"

"Sentenceing"

"Narcotices"

"Undre"

"Surgeoun"

"Commuications"

"Ovre"

"Wondreful"

"Derivitave"

"You lose, mod for brians."

"Deisowned"

"Deeppest"

"Dodgeing".

"Staedy"

"Linme"

"Getr"

"Experieince"

"Appropiate"

"Laywer"

"Visitpors" Y

"It's "complaintant," you sniveling weasel." (Roger Wiseman on spelling complainant.)

"Irreevant"

"Forwared"

"Glady"

"Neighborhod"

"Mena" Mean?

"Notr"

"Sassifyed" .

"Fantasises" .

"Illarate"

"Reveresed"

"Soem".

"Minisule".

"Champoin".

"Anoinymous"

"Acident"

Just to name a few, need I go on wogie?
>
>
>>>No, you sent in a doctored tape, don't you remember?

You you you...you keep talking about 'you'. Just who is this 'you' you keep babbling about wogie?
You're so stupid you make a bag of hammers look smart. You couldn't line up a one car caravan.

Poor Butt Cornholer, long on accusations, short on proof!

Could Butt Cornholer the senile old fuck just be full of shit?
Yes!

> >>Show proof of this letter you calim
> >
> >
> > "calim"???? My my, is Butt Cornholer a bit upset?

<guffaw!> No answer for that, huh "imaginary pilot's license"
boy?

> > And yet you can't provide proof you do have one.
> > Not without exposing who you really are.

Chickenshit Butt Cornholer.....

> > I win, since Roger's warning letter was sent out because you
> > made by fabricated evidence.
>
> You? Who is this 'you' wogie that you claim frabraicted
evidence. There
> was no need for anyone to frabricate

"Frabricated"
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!

> any evidence two-test, everyone

Everyone knows you must be a high schpool dropout with a G.E.D.,
too.

"Frabricated"
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!

> knows you were jamming other stations on 20 meters.

No, it was allegations of jamming, can't you read? Of course
not, all you can do is post ARRL press releases instead of facts.

November 09, 1999

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been
deliberately and maliciously interfering with the radio
operations of other
licensed Amateurs on the 14 MHz Amateur band.

This interference has occurred at various times in the last
several months and includes

broadcasting music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service
to be
self-policing. Operation of the type described above is contrary
to the basis and purpose of Amateur Radio and degrades the
service
for legitimate users. This serves as a Warning Notice that such
operation will not be tolerated. Additional incidents of
operation of the
type described above will result in a monetary fine being levied
against you and in revocation proceedings before an
Administrative Law
Judge.

You are requested to contact me at 717-338-2502 to discuss this
matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

See?

> That's why you had to retest to keep your license, curtains
boy.

That's not what the retest letter states. And you should know,
since you posted it to the newsgroups before. You lose again.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!

> So again wogie, you deny you got a letter from the FCC about
you causing
> malicious interference on 20 meters?
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!

No, Roger got a letter that stated alleged interference. Big
difference. But somebody who is mentally impaired like you can't
perceive it.

> There was (Butt Cornholer's admission he fabricated tapes and
sent them in to the FCC)

Oh, so you did fabricate it. That must be why Roger never ever
received any license suspension/revocation or fine. Nothing. You
lost, fake tape maker.

> > No, you sent in a doctored tape, don't you remember?
> >
>

> Again, who (typical backpedals)

You, you senile old useless asck of shit. Can't you follow along?

Keep those model airplanes flying, imaginary pilot's license
boy. BWHAHAHAHAHAHAHAHAHAHAHAHA!!!

When I first became involved in electronics, slide rules were the one absolutely necessary calculation tool owned by every engineer and technician. They were simple, uncomplicated, easy to use (after some period of rather tedious practice), and delightfully low tech. They were the calculation tool-of-choice for over three centuries.

Then, as the giant asteroid was to dinosaurs, overnight the $9.95 pocket calculator killed the slide rule. Despite it's ubiquity and utter simplicity the mighty slide rule went extinct in less than a decade! Perhaps somewhere, in a backward company in a backward country without sand from which to make silicon chips, a group of stalwart engineers still treasure their Pickett or K+E slipsticks, and still require a practical examination, down to the third significant digit, of an engineers proficiency, and whether they actually could explain the difference between the CIF and DIF scales.

Perhaps some amateur mathematicians still are proficient on slide rules (after all, they haven't been outlawed!). I bet they even hold speed and accuracy contests at a nostalgic "Slippers" convention each spring in Akron, Ohio. Led by the scratchy but firm voices of their oldest club members, Vince Bentupcursor and Larry Elscale, they close each convention by quoting the 1940's fight song of that bastion of wood-assisted math, Cal Tech:

"E-to-the-x du dx, E-to-the-x dx,
Cotan secant tangent sine,
three point one four one five nine.
Square root, cube root, QED
Slipstick, slide rule, Hooray! CT!"

The next SLIPS newsletter duly reports the resolution of the IEEE BoD to gain legislation to include slide-rule competency testing as a requisite to all engineering degrees, except those seeking 2-year Stickless Technician degrees. Regular Technicians will require 5CPM (Calculation Per Minute) exams, BSEE will require 13CPM, and MSEE will require a 20CPM exam.

On another front, when I first became involved in amateur radio, Morse code was the one absolutely necessary communications mode used by every ham. It was simple, uncomplicated, easy to use (after some period of rather tedious practice) and delightfully low tech. It was the amateur communication mode-of-choice for over three generations.

Then, as the giant asteroid was to dinosaurs, overnight.....

>>
>> Motorola was NOT a company in 1940. THAT is a fact. References
>> provided.
>>
>> Lennie was WRONG.
>
>Hi!

Well, the self-styled mighty warrior, self-proclaimed "expert" on
corporate structures, is (as usual) strutting double-time in
this barnyard crowing at his cackling best about "rightness." :-)

MOTOROLA Corporation existed as such BEFORE the Last Action
Hero was even conceived. [some doubt his conception, saying
he was simply issued out of a USMC supply room long ago]

The MOTOROLA logo was synonymous with "Galvin" before WW2.

Anyone IN the electronics-radio industry KNOWS of MOTOROLA,
both as a corporation and as a brand name, a logo.

>> Let's see what LENNIE does, other than provide yet another verbose
>> spindance to hide behind his error...
>>
>> OOOOOOOOOOOOOOOOOOPS! TOO LATE! He already did that!
>>
>> It was no "slam thread".
>
>They're all slam threads.

Mighty WARRIOR Stebie thinks EVERYONE is out to "get him" and
must retaliate with slam threads. His personalities are
paranoid.

>> Lennie got his ego in front of his common sense again...Wasn't
>> paying attention. But he CLAIMS to be a "professional".

Poor Stebie, the Last Action Hero...claims to know all about "professional" employment in radio-electronics. This self-proclaimed knows-all-about-engineering has all the "experience" of less than a half year as a purchasing agent. Tsk, tsk.

Stebie knows the "facts" about Motorola...because he went to www.motorola.com and cut-and-pasted some corporate history there. He waves that in "triumph" as if that is "vinidcation" of his imaginary dispute about "greatness."

Tsk. I don't "claim" to be a professional. I've just worked in radio-electronics since 1952, getting paid real money for such work. The IRS knows that, the Franchise Tax Board of California knows that, the DoD knows that, the FBI knows that, the IEEE knows that, the ACM knows that, the County of Los Angeles knows that. Stebie, he don't know that.

I've worked for RCA Corporation. RCA no longer exists except as a logo now owned by Thompson CSF. RCA Corporation was ONCE NOT "RCA Corporation." Amazing but true.

I've worked for Hughes Aircraft Corporation. That was once "Hughes Tool Company." Hughes Aircraft NEVER made aircraft (except some missles, the airframes contracted to another). Hughes Aircraft Corporation is no longer, having gone through a number of owners in recent decades. Hughes Aircraft was once belonging to "Hughes Medical" and separate from Hughes Tool Co., that firm that DOES make aircraft. Amazing but true.

I've worked for the Rocketdyne Division of Rockwell International. That was once the Rocketdyne Division of North American Aviation. Boeing Aircraft Company purchased Rocketdyne Division several years ago. The Rocketdyne Division did not exist in WW2. Amazing but true.

I've worked for contractors to JPL (Jet Propulsion Laboratory) that was once a part of California Institute of Technology, a university in Pasadena, CA. "JPL" became a separate legal entity and later became part of NASA. Not amazing but true.

I've worked for Micro-Radionics, Inc., a small Van Nuys, CA, corporation that was once a division of Kearfott Corporation, a maker of servo and synchro motors. "MRI" was later purchased by Systron-Donner and then resold to another.

The corporation CHANGES in the radio-electronics world are an amazing mass of names and players that few outside of the industry can follow in their lineage. MOTOROLA as a corporation has existed since 1947...long before Stebie was a frown on his pediatrician's brow. MOTOROLA as a corporation, as a logo, as a symbol of a major player in radio and semiconductors is LONG KNOWN to all of us who work or have worked in the industry.

Along comes a wounded little batty rooster called Stebie who
has very little REAL industry experience who got his pukey
little amateur feathers all disarranged by COMMON INDUSTRY
KNOWLEDGE known by thousands of others. Little Stebie don'
wanna do nuttin' but FIGHT, FIGHT, FIGHT. He be very amateur
"extra" and "mighty warrior" (of the keyboard, of the mouth)
an' wanna be "victor." Stebie new "victor talking machine."
Play round flat plastic discs with dull needle, skipping
tracks, making clickey sounds.

>> Obviously THIS professional got his "facts" wrong. I just showed
>> him his error.
>
>Poor Steve. Hanging by a thread again.

Stebie is nothing more than a poseur in radio-electronics,
a dink who self-defines his "might" and "expertise" but still
comes up as a dink. Stebie is one sick puppy. Too much HATE,
too much ANGER, no sense.

Stebie want world black and white, what he say is ONLY truth.
Not so. Stebie is black mark on today's radio amateur.

>Well, I didn't come here to make any friends, they bother me not... I
>don't think we need be standing on pomp and circumstance in these
>times...

Understood and agree with you.

But, to most in here, there IS a "pomp and circumstance"
going on in their imaginations. Mostly stuffed in there by
dilligent and effective brainwashing of the big publishing
house in Newington.

"Amateur radio is a SERVICE" crow some. Their imaginations
conjur up a military service with rigid rules/regulations
which MUST be adhered to at all times. All SHALL march to
the same drum-beat. Everyone MUST think alike. Dumb for
a hobby activity which is supposed to be fun, a recreation.

>My skin is about as thick as ones can get, and I darn well know how to
>call a spade a spade--still deal with jr college kids two nights a
>week... these old guys aren't anything next to them...

Heh heh heh. After 20 1/2 years of doing computer-modem
communications, I've got armor plate for skin as well.
Being a co-sysop on a BBS was an interesting experience,
that of seeing both the private and public text "life' of
some participants. More like a lab class in advanced
clinical psychology. Morbidly fascinating.

The main theme of most "regulars" in here (mental olde-fahrts
all) is SELF-IMPORTANCE. Further, each one is ALWAYS RIGHT.
None may be corrected for that is an outrageous "insult" on
their very being...and that calls for Flame War! FIGHT!
FIGHT! FIGHT! [gotta love it sometimes...:-)]

If they don't have anything specific to FIGHT about, some
will MANUFACTURE things in order to misdirect "blame" from
them to the challenger. See this Stebie-manufactured
"Motorola didn't exist in WW2" thread. Has NOTHING to do
with amateur radio but he deems it "necessary" in order
to "prove" his "enemy" is "wrong." :-)

Never mind that the MOTOROLA logo and brand name identity
was known to the public prior to WW2, the deluded one has
to show the "total wrongness" of one in a previous

statement! Never mind that the existance consisted of some legal statements and a lot of corporate letter heads being changed in Chicago..."Motorola did not exist prior to 1947!" Terrible "wrongness." :-)

The silliness of some of those statements of accusation is marvelous to behold. That human beans get so wrought up in damnation of others is fascinating. Transparent to any sane person reading all this. So is that "No kids, lids, or space cadets" supposedly remarked by an old ham once. :-)

Some of the denizens of this din of inequity are just nuts.

From: "John Smith" on Thurs 9 Jun 2005 07:10

>At 52 I am one of the "young guys here." The "amateur hobby radio'ists"
>here have managed to chase away most if not all--down to the very last
>REAL young guy away.

John, all of the mighty amateur warriors in here are "young."
They haven't aged a bit since they got their first ham licenses
as teen agers. Neither has their comportment...still frozen in
adolescence. :-)

This newsgroup IS "The Twilight Zone," needing no "signpost up
ahead" to tell where anyone is...only Rod Serling is "SK."

>They do this with personal attacks on those of differing opinions. They
>deny facts and figure. Like a bunch of shyster accountants they bend
>figures to attempt to argue for the status quo.

Status quo kept status quo. Time be frozen in their adolescence.

THEY rule. None may say nay to their mighty (teen-age) words.

THEY formulate new laws of physics, mathematics, statistics,
bend truth like an ultimate elastomer at breaking point, say
that is "truth."

>Like a bunch of lawyers they attempt to bend the words of Haynie into an
>"Atta Boy", while in reality he chastises them for ill behavior and
>damaging the hobby.

Haynie was "democratically elected" by ruling majority of
"representative of all hams." So sayeth the League.

Ergo, by THEIR rules, they defile themselves by talking against
the words of their "elected representative." Hypocritical
criticism by these mighty radiomen.

>There are no young hams here for a darn good reason--few have a skin
>thick enough to have staying power. And then, you have those who just
>have better things to do....

Quite true, but some of these mighty (radio) warriors have
skins so thin it rivals the thickness of a microtome's
finest slice. They experience mighty emotional PAIN and
STRIKE OUT in anguish. So many strikes they have been "out"
for decades.

THEY cannot comprehend the modern world nor reality so they
defile it, denigrate it, damn all who point it out to them.
THEY rule. All shall bend to THEM.

>These guys who have stagnated the hobby are attempting to maintain the
>status quo even as the hobby dips to low numbers, cannot achieve even
>minor new band allocations and are ineffective in even limiting
>BPL--broadband over powerline--simply because they have managed to put
>the amateur radio hobby so far on the back burner most have forgotten of
>its existence... and this they are quite happy with, clear bands so they
>can rag chew with buddies over rants and medical problems is what they
>really seek...

John, THEY RULE. THEY exercise "judgement" on all who do not
heed their god-like edicts. When challenged they retreat into
their edict bunkers and compose songs and sagas of their "those
were the days" when they were (supposedly) young. The League
once had Archie comics. Fitting.

In one (strange) way, it is entertainment...TV re-runs on a
second-rate cable channel playing sit-coms of decades ago.
The Land Where Time Was Lost. Where some of THEM still live
in their heads.

THEY quo about their status like aging banty roosters. The
hens got tired of them some time ago, some leaving for better,
saner "nests." Their barnyard is now emptier and they feel
free to strut and posture...which they do in parades of pomp
and patriotic phrases (like pharisees) over their greatness.
Never mind their limping struts nor the molting feathers and
scratchy, cackling words of admonition...they are ageless,
immortal, secure in their "judgement" that only THEY are
"right."

>If you are in your 30 and under you will have a hard time staying
>here--unless you like turning your nose brown...

THEY cannot understand that and their feathers ruffle in
outrage that they are not believed. THEY "judge" and that
is that. All must to THEIR bidding, heed their guru words
of yesteryear despite the crackling of their cackling like
so much QRM. They are captains of their ship sinking slowly
in the river called denial.

>Warmest regards,
>John

And the same to you, Johm.

Mind the fallen molts and the absolute shit in this barnyard
left by the strutting but limping banty roosters. The FDA
has no ratings for these hams. Squawk 77, Mayday!

> REAL gunfire...no BFA's.

Real KEYBOARDING, mighty warrior of the newsgroup.

NO EVIDENCE, no "real gunfire." :-)

>> Probably not. OK, I'll give some.
>
> Cute. None of them correct.

Tsk, tsk, as "correct" as mighty Stebie's mouthing-off. :-)

>> Is that a hostile action?
>
> I am sure that you wouldn't know "hostile action" if it greeted you
>in the parking lot and poked you in the nose, Brian...

Poor Stebie, so full of himself he'd trip over a speed bump
in that parking lot, fa' down and hurt hisself. Waaa-waaaa!

;-)

Gotta love these wanna-be warriors, so full of STORIES of MIGHTY WARRIOR ACTIONS! If any of it were true, the DoD budget would have to be increased by several millions in order to buy all the medals that should rightfully be awarded to these LAST ACTION HEROES! Stebie gets CMH with oak leaf clusters!

Stebie is a FIGHT MANUFACTURER. Better than Don King (except for the lack of hair). FIGHT FIGHT FIGHT !!! Stebie wanna BEAT UP anyone daring to contradict him. MIghty WARrior of newsgroup! Stebie MAKE UP ISSUES, call everybody wrong, snarl, POSTURE, BRAG. No evidence. All mouthy keyboard. Hooray for ham radio, last battlefield. Last battlefield for Mighty Warrior Stebie.

NO evidence seen by anyone anywhere of Mighty Warrior ACTIONS.

All mighty TEXT, words, brag words, threats of bodily harm to unbelievers. Adulterated bullshit. Not good fertilizer for future flowering youth.

That's what his generation of AMATEUR RADIO is all about?

Haynie didn't include that with his speech. Tsk. Should have.

Maybe Stebie challenge Haynie with "parking lot battle" for forgetting the mighty warrior (of no evidence)?

Modern AMATEUR RADIO, home of the MIGHTY WARRIORS OF KEYBOARDS.

Pbthththththth.

You bet. Somewhere around here today he posted about his CB operations,
had his station inspected TWICE, has "enemies who play dirty tricks on
him" . . exactly the kind of operator profile ham radio needs like it
needs a hole in the head.

Steve, why would it cause me any pain and suffering? Do you wish to harm me?

I was asking you what a hostile action meant to you. Prior to yesterday, it meant getting sand in your eye.

N2EY:

Granted, things are EXAGGERATED in my text... it is done to emphasize the point...

We seem at this point of where you, "have to hit them over the head with a 2x4 just to get their attention."

If they are shocked, angry and ready to have a go at me--so much the better...

I am not really a "heartless old bastard", although I play the part well... <grin>

... we need to give these young guys a break... frankly, you guys may have all been different than me with my first novice ticket--however, I know a was a young-dumb-smart-ass... now it is my turn to pay back what those guys who put up with me back then went though--and it would help if we all chipped in here a bit...

Not all hams are evil--in fact, I really have NEVER met a truly evil one--so you won't get me to argue that--but some have their actions, motivations and goals a bit misplaced...

... "old buzzards" may have been a bit over-stated on my part... <grin>

... long as we can all talk and "get real" we can work something out--I am sure...

Warmest regards,
John

K4YZ:

No. We are Americans first, fathers, good members of communities, etc... about a hundred really important things--before we need ever list the fact we are a ham...

I don't need "ham worship" and the guys who are drifting around after it make me puke... that is just how it is with me...

I hang my master and Phd on the wall because those really did take hard work and are truly a demonstration of proving myself a scholar... my ham license hangs at the station because it is required by law!!!

I will give you a thousand reasons I am a worthwhile human being before I ever get to the fact I am a viet vet and ham... those two things I did for my own reasons... not really to serve any one else more than to serve myself...

Even at 52 I come from an age when men were really men--it meant something then to be a man, to protect the innocent, the weak, the women, the children, American pie...

Today, I watch bellyachers lobby for more difficult barriers to be placed in front of some--hell, I fought to make America the land of milk and honey--and it is far different today than I would have it...

I can do one thing, and that is to "hand down" and pull up the ones who will, all too soon, take my place--stand my responsibilities and hold the reins...

One thing I wish to avoid until the day I die is becoming a bitter old man decrying what a waste the youth are in this world--how deserving I am--and how deserving all others--if you have not understood from my words up to and at this point let me spell it out for you--SUCH "MEN" make me sick and afraid it has all been for naught!

Warmest regards,
John

I learned code to get my license, never since--I live what I claim is fact...

... if I do code it is though an automatic key and keyboard and cw-to-text reader, all of my own design and construction... being a software engineer I really enjoy hardware projects, experimentation and antenna construction--I never get to get my hands dirty in the "real world."

Fatboy? Hardly. But I just know you wear size 48 pants, tubby.
Butt Cornholer must need his colostomy bag changed again, he
gets so upset......
making such spelling mistakes like that.
Poor little impotent Butt Cornholer, the obsolete license and
think he has a "pilot's license."

Get to flying those model airplanes, "Chuck Yeager"
BWHAHAHAHAHAHA!!!!!!!!

> > And where do you pull that completely dumbassed statement
from?
> > Roger can copy 13 wpm code and proved it when he passed his
> > General exam.
>
> OK wogie, name (more impotent posturing)

Mheh. You can't even spell Roger over the computer, one would
shudder to listen to your sending your mangled English in cw
like an elephant would stomp it out.

> >
> >

> You? Who is this 'you' wogie that you claim frabraicted
evidence. There
> was no need for anyone to frabricate

"Frabricated"
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!

> any evidence two-test, everyone

Everyone knows you must be a high schpool dropout with a G.E.D.,
too.

"Frabricated"
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!

> knows you were jamming other stations on 20 meters.

No, it was allegations of jamming, can't you read? Of course
not, all you can do is post ARRL press releases instead of facts.

November 09, 1999

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been
deliberately and maliciously interfering with the radio
operations of other
licensed Amateurs on the 14 MHz Amateur band.

This interference has occurred at various times in the last
several months and includes

broadcasting music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service
to be
self-policing. Operation of the type described above is contrary
to the basis and purpose of Amateur Radio and degrades the
service
for legitimate users. This serves as a Warning Notice that such
operation will not be tolerated. Additional incidents of
operation of the
type described above will result in a monetary fine being levied
against you and in revocation proceedings before an
Administrative Law
Judge.

You are requested to contact me at 717-338-2502 to discuss this
matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

See?

> That's why you had to retest to keep your license, curtains
boy.

That's not what the retest letter states. And you should know,
since you posted it to the newsgroups before. You lose again.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!

> So again wogie, you deny you got a letter from the FCC about
you causing
> malicious interference on 20 meters?
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!

No, Roger got a letter that stated alleged interference. Big
difference. But somebody who is mentally impaired like you can't
perceive it.

> There was (Butt Cornholer's admission he fabricated tapes and
sent them in to the FCC)

Oh, so you did fabricate it. That must be why Roger never ever
received any license suspension/revocation or fine. Nothing. You
lost, fake tape maker.

> > No, you sent in a doctored tape, don't you remember?
> >
>

> Again, who (typical backpedals)

You, you senile old useless asck of shit. Can't you follow along?

Keep those model airplanes flying, imaginary pilot's license
boy. BWHAHAHAHAHAHAHAHAHAHAHAHA!!!

'zactly, there's other issues to deal with.

Maybe, but I doubt it.

They did a big restructuring in the 1998-2000 time frame. Only became
effective April 2000. I don't think they really want a big shakeup of
the rules every couple of years.

> Which is typical regulatory "behavior".

Yes, for some agencies. So you may be right.

> Or they had
> already decided to retain the code test into the future. With 98% of
> the world's population still subject to code tests and given the small
> number of countries which have abandoned the code tests it just might
> be that the decision to retain the code test here was quietly carved in
> stone 4-5 years ago.

Doubtful. The verbiage of the R&O for 98-143 pushed aside every reason
for code tests except one: the treaty. IIRC the phrase said there was
"no regulatory purpose" to code testing except compliance with the
treaty. Which would lead any logical person to think that if the treaty
requirement went away, there'd be no regulatory reason left, and the
FCC would dump Element 1.

But that was 5+ years ago....

> Conversly though the waivers problem is still out
> there . . .

Not really.

Recall that the only reason we got waivers back in 1990 was that
Papa Bush wanted to do the King of Jordan a favor. White House
tells FCC to fix the problem so the nervous guy can chat with
The Suffixless One on 20 ssb. FCC invents medical waivers, cites
treaty for 5 wpm, King and Papa Bush are happy, end of story.

But now the king is long gone. And there aren't any hams who are
heads of state that are asking Shrub for a favor.

Despite what the article sez, waivers weren't any work for the FCC.
The VEs handled the whole deal. Applicant gets a doctor letter,
VEs decide if it's genuine (basically that the signature came from
a real doctor) and do the paperwork.

FCC's only headache about waivers, IMHO, was the complaints from
some hams. FCC fixed their wagon - no more waivers.

> > But FCC didn't do that, even after getting a pile of proposals

> sometime next year doesn't matter much and I expect it to be a real
> gooder.

Maybe. Obviously no hurry, either. I should revive The Pool.

If past history is any indication, it'll be 2007 before we see new
rules
actually go into effect.

> Gonna be some nuclear explosions in this NG when it finally
> does get published. Heh.

Maybe. All depends what's in it. Suppose - just suppose - FCC
focused entirely on the license classes, subbands and writtens,
and left 5 wpm for HF access, same as now. Imagine the reaction...
>
> > Tune down the low ends of the HF bands, in the evenings when most

> > of the younger folks aren't tied up with work, school, kids, etc.
> > There's a lot more going on than the voice modes on the high ends.
>
> Even in the phone bands the U.S. geezer nets are usually well up the
> bands to accomodate the Generals, there's very little of that sort of
> operating in the Extra/Advanced segments.

That's a fact.

Now if you're in the mood for wild speculation, here's some theories to
toss around:

"It'll Turn Into CB/Freeband!"

One of FCC's longterm headaches is outlaw operation - folks who don't
care what the rules are, they just fire up and get on the air
regardless.
Some are on the cb channels, many have freebanded their way all over
upper
HF.

Started about 40 years ago when 27 MHz cb got out of hand in the
mid-1960s,
really took off in the Smokey-avoiding '70s, and has been in the
background
ever since. Sometimes not so much in the background, either.

Enforcement is a real pain for FCC because they have to establish all
sorts of info besides some DF readings. And when they do nail somebody,
the defense is often simply "I didn't know, I won't do it again".

With licensed violators it's a different game because they ID, you know
a lot about them from various databases, and they've already agreed in
writing to let FCC in for inspection purposes.

So maybe FCC thinks that by reducing license requirements they can get
some of those freeband/cb folks licensed.

"The Revolution That Wasn't"

Over the years the claim has been made again and again that
"technically
knowledgeable" folks were being kept out of ham radio, or kept off HF,
by the license requirements. And how if those requirements changed,
we'd
have a techno-revolution on the ham bands.

A related claim is that we'll get lots more hams if a license is easier
to get.

20+ years ago, such claims might have made some sense, because nobody
knew better. But the lowering of test requirements hasn't brought a
brave new techno-world, nor a lot of new folks.

Remember the guy who used to preach here about "no setasides for legacy modes" and "electronic paintball wars"? He'd tell us of the "elitism" of 1x2 and 2x1 vanity calls, and how "better modes and modulations" were the future.

Comes the restructure, and he goes from Tech Plus to Extra. Gets a 2x1 call, sets up a station (no homebrew, though) and proceeds to chase DX on HF SSB. 70+ countries last I knew, prolly got DXCC in the log by now.

FCC may be tired of all those claims by now, having seen none of them pan out.

"BPL and RFI"

Perhaps FCC sees us hams as a pain the neck. We don't generate revenue, we complain about RFI and line noise and such, and our signals get into all sorts of things through no fault of ours. Put a highpass filter in every TV set? Shielding that would cost a few pennies per unit? Sheesh.

And when a new technology comes along just in time to distract us (as if broadband access will make the economy boom), who raises hue and cry and won't shut up? Hams and their national organization.

So maybe FCC doesn't want lots of new hams on HF. Just that many more complainers!

"What's The Big Deal?"

The code test today is but a shadow of what it used to be. Time was, the only way to pass was to put down a solid minute of correct legible copy. No going back and fixing up afterward. No CSCEs, no second tries the same day, etc. All gone and not coming back.

The VEs are allowed a wide latitude in accomodations.

Farnsworth spacing is standard - because it's usually easier. But if somebody wants "regular" 5 wpm, they can get it from most VEs.

High tone or low? Speaker, 'phones or flashing light? Pen, pencil, typewriter? Just ask. Maybe you'll have to bring some hardware but most VEs I've met will meet you more than half way.

It's even possible to substitute a sending test for the receiving test.

Yet with all this, there are complaints that it's "too hard". (See the "Amateur Radio In the 21st Century" paper about grown people with tears in their eyes 'cause they failed).

FCC may look at all this and just draw the line. Note how, in the 2000 restructuring, they outlawed multiple-choice code tests....

Nobody really knows but a few folks in FCC, and they ain't saying.

Guess it's time to toss this out again....

Maybe the way out of the mess is for a Smith Chart test to replace
the code test.

Understanding the Smith Chart and being able to use one actually
demonstrates several areas of knowledge and skill. Smith Chart tests
could consist of interpreting a solved problem on one chart, (the
"understanding" test) then solving a different problem on a blank
chart (the "solution" test).

At first, most hams and wouldbe hams
would would simply study the Smith Chart and pass the tests.

But then the trouble would start...

Some hams who had not passed the Smith Chart test might say that those
who had passed the test were being "elitist" about their Smith chart
skill and knowledge. The term "chartless Extra" would be considered
an insult by some, a badge of honor by others.

Some would grumble that since they have no desire to design
antenna/transmission line systems, they should not be required
to pass a Smith Chart test. They would point out that other services
do not have Smith chart testing, and so neither should hams.

Defenders of the tests ("Smithys" or "chartists") would claim that the
Smith chart was a "uniquely practical, efficient, and universal" tool
for antenna/transmission line work. They would claim to have been
"smartened up" by the Chart test requirement. Stories would be
recalled about how lives had been saved by hams able to quickly design
matching sections to permit using an antenna on a frequency it was not
designed for, and would predict dire consequences in the event of
widespread disaster.

Those opposed to the test ("Smithless" or "nochartists") would argue
that newer, more accurate, less error prone software systems had left
the Smith chart in the dust. "We don't want to use OLD design
methods" and "The Chart is too slow and error prone" would be their
rallying cries. Other would ask "do you have to show slide-rule
proficiency before using a calculator?"

There would be testimonials by hams who had worked 300 DXCC countries
using QRP and a dipole without any reference to a Smith Chart, and
claims of others who "had rote-memorized the Chart and promptly forgot
it all as soon as the test was over". Some would tell stories of new
Extras who held Chart-burying ceremonies at the base of their antenna

systems (designed without Smith Charts, of course).

Many would claim that young people, used to solving even minor addition problems on computers, had no interest in learning old-fashioned
"buggy whip" graphical methods. Some would say that the emphasis on such a timeworn, old fashioned, crude graphical method of solving problems made ham radio look backward and nonprogressive, and was downright embarrassing. Ph.D's in EE would claim that they had designed entire radio communication systems without use of the Smith Chart, yet were kept out of ham radio because of the test.

The arguments would become more heated and insulting over time. Nochartists would point out that the Chart test was discriminatory. For example, blind people could not fulfill the letter of the law in passing the test. Some would claim to be "chart impaired" and unable to pass
the test due to inability to do geometry. The question of "chart waivers"
would be raised, and much angry invective spewed over "chart fraud" and

"open chart pools". There would be a demand that the use of graphical calculators be allowed in the tests.

Chartists would claim that accomodations such as Braille Smith charts met the intent of the law. Old timers ("quillpenners") would recall a time when all charting was done by hand, in ink, on chart paper costing the
modern equivalent of several dollars a sheet. (They used ink because they
were so confident of doing it right the first time).

The use, or nonuse, of the Chart by military and commercial services would be hotly debated. Some nochartists would claim that the military stopped using the Chart during WW2, while some chartists would claim that the Smith chart plays a crucial role in the modern military.

A popular summer blockbuster movie starring Jodie Foster, Will Smith, Jeff Goldblum and Bill Paxton would have a plot in which alien invaders were detected, then repelled by means of a hastily reactivated surplus
Russian over-the-horizon "woodpecker" radar system. The critical plot element would be the heroine's use of the Smith Chart to match the "woodpecker" transmitter to the Arecibo dish. (How the Russian radar wound up in
Puerto Rico would be left unexplained).

The ARRL, Gordon West, and W5YI would be caught in the middle of the debate. From the first, they and others would have marketed a whole line of Smith chart training aids, including books, videotapes, and software. W1AW would transmit SSTV programs explaining chart use, and MFJ would

market "portable personal chart trainers". Claims of monetary interest in the production of Chart materials would be made and denied. Poorly worded surveys would show a variety of opinions on the issue, but no consensus.

Nochartists would claim that the chartists were just "old f***s" who were supporting the status quo due to "chart chauvinism", and did not understand the realities of the modern age. A few chartists would claim that the nochartists were just "whiners who were too lazy to even

learn how to hold a compass correctly". The need for "high speed chart tests" would be debated hotly, many claiming that no time limit should be
placed on the chart test. "One Chart per week satisfies the law" would be
their claim, while skilled chartists would speak of doing 30, 40, even 50
charts per hour, and being able to "see the solution without even making a mark on the chart".

Eventually the nochartists would organize a group to fight the chart test.

The founders of No Charts International would claim that they had no problem with anyone USING the Chart, just the mandatory test requirement. "It's not the CHART, it's the TEST" would be a common rallying cry.

No, I think we'll find:

"Bergeron's epitaph for the planet, I remember, which he said should be carved in big letters in a wall of the Grand Canyon for the flying-saucer people to find, was this:

WE COULD HAVE SAVED IT
BUT WE WERE TOO DOGGONE CHEAP

Only he didn't say 'doggone.'"

The freebanders I know and communicate with simply freeband to escape
the code, most are young college kids who start experimenting with
wireless lans/wans, start building equip and then just keep branching
out from there--most are more knowledgeable than hams--especially in the
GHz range... they look at the code requirement and say, "why...", then
go back to their local nets of 24 Ghz...

Warmest regards,
John

When conditions are poor, even some one as poor at morse code as I am can
beat a "code reader" sound card/computer.

No the waivers problem is over as waivers are no longer allowed since the
only code test is 5wpm.

Wasn't it the council of VECs who made that decision? I believe that Part
97 does not specify how the 5wpm test is to be administered.

Depends on how you define easier. The ear can copy code so sloppy that no
computer/soundcard/software would ever decipher it.

I think you're correct Dee. The FCC rules are silent on the form of actual examination:

&#65533;97.503 Element standards.

(a) A telegraphy examination must be sufficient to prove that the examinee has the ability to send correctly by hand and to receive correctly by ear texts in the international Morse code at not less than the prescribed speed, using all the letters of the alphabet, numerals 0-9, period, comma, question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

Interestingly, the NCVEC has chosen to ignore the "ability to send correctly by hand" clause of the rules.

I am betting just the opposite, and I bet the code reader can copy at a
speed long after the human reader is all done...

one advantage, in microseconds the code reader can guess at the
likelihood of what character the dot/dash sequence is in logical
relation to forward and reverse characters (whenever there is a slight
doubt)... the human reader would just be sitting there losing
characters...

Back before VE days the FCC examiners often skipped past the sending
test too. It's been a long time and the details are fuzzy in my mind at
this late point but when I went for my Extra the examiner called off
the receiving test about a minute and a half into it and ignored the
sending test. Maybe that was when I went for my General . . ? One or
the other.

Ooops. . I've obviously gotten out of touch with this one and it looks
like I need to get back in touch. My recollection is that when the FCC
didn't competely eliminate code tests for the disabled they claimed
they couldn't do that because the treaty demanded a code test
disabilities or not.

Now that the treaty makes code tests optional the FCC can't use that
"excuse" any longer so it seems to me that we're back to the
possibility of somebody looking for a medical waiver vs. any code test
at all . . ?? . . ?

Hi flyguy, it's been awhile.

I'm using Google to get in here and Google usually compacts volumious
original posts in replys unless I break 'em up so all I see in my reply
to Hans is his original post bundled down to -show quaoted text- and
nothing more. So my reply comes up onscreen here simply as:

- - - -

- Show quoted text - (Hans' entire post)

Good show Hans, great piece!

(. . even though I disagree with your conclusion. Strenuously.)

> 73, de Hans, K0HB

w3rv

- - - -

Which is eminently readable. *Here*. I do get your point and I'll do
more zapping, tnx for the critique.

Oh no, Brain...Defiling Veterans is Lennie's schtick. Your mentor.
The slimey weasel that parodies the Tomb of the Unknowns and whom YOU
said you "admire".

Mine is causing painful but non-lethal trauma to those who
associate me with a known traitor like Jane Fonda.

Know anyone like that? I have one in mind.

Stebie is getting so that he doesn't know who to believe
anymore...therefore the "alleged" word. :-)

He would describe Benedict the Sixteenth as "allegedly"
the Pope! :-)

>Didn't you follow the link to the ARRL site?
>
>Go back up the the top, and click on the blue thingy.

Let Stebie figure it out for himself. Good mental
therapy for the congenitally confused. :-)

Stebie FANTASY.

Gotta love these mighty macho morsemen wanting to commit
bodily harm on all who disagree with them. Infantile
idiots all of them.

>I was asking you what a hostile action meant to you. Prior to
>yesterday, it meant getting sand in your eye.

Stebie suffers from the bleeding disease. Everytime someone
disagrees with Stebie, Stebie gets blood in his eye.

Stebie very ANGRY. Stebie very HATEFUL. Stebie nuts.

Stebie nutcase not good for U.S. amateur radio role model.

> this barnyard crowing at his cackling best about "rightness."

You were wrong, Lennie. One of many, many errors you've
promulgated.

And again another lie. Please present the post wherein I claimed
"expert" on corporate structures.

> MOTOROLA Corporation existed as such BEFORE the Last Action
> Hero was even conceived.

Yes...it was. In 1947. Not 1940, as you suggested. You were
wrong.

> The MOTOROLA logo was synonymous with "Galvin" before WW2.

Uh huh.

And that's ALL it was...a logo...A model name for automobile
radios and first generation mobile 2-way radios for business and
government.

But NOT a company.

> Anyone IN the electronics-radio industry KNOWS of MOTOROLA,
> both as a corporation and as a brand name, a logo.

Uh huh.

And anyone who was paying attention (like I was...) knows that
"Motorola", as the name of a corporation, didn't exist until 1947.

> >> Let's see what LENNIE does, other than provide yet another verbose

> Mighty WARRIOR Stebie thinks EVERYONE is out to "get him" and
> must retaliate with slam threads. His personalities are
> paranoid.

No plural of personalities here, Lennie.

YOU seem to have some issues though...One of your personalities
demands strict adherence to your rhetoric and expects instantaneous
begging for forgiveness when you "call them" on an error.

Your OTHER personality insists that he is not responsible for his
errors, that having found one was allegedly an act of hatred or anger,
and is somehow flawed.

The fact remains, however, that "Galvin" was the company you were
refering to, regardless of what their name later became.

Details, Lennie...

> >> Lennie got his ego in front of his common sense again...Wasn't
> >> paying attention. But he CLAIMS to be a "professional".

Still waiting for you to ante up the post wherein you alledge that
I made those claims, Lennie.

(DOS Hint: Didn't happen. Leonard H. Anderson is again lying to
hide his own shortcomings)

> Stebie knows the "facts" about Motorola...because he went to
> www.motorola.com and cut-and-pasted some corporate history
> there. He waves that in "triumph" as if that is "vinidcation"

> of his imaginary dispute about "greatness."

It is a fact. And I guess you didn't pay any attentionas to where
THAT came from (wasn't motorola.com)

> Tsk. I don't "claim" to be a professional.

Sure you do. Why are you again lying?

> I've just worked
> in radio-electronics since 1952, getting paid real money for
> such work. The IRS knows that, the Franchise Tax Board of
> California knows that, the DoD knows that, the FBI knows that,
> the IEEE knows that, the ACM knows that, the County of Los
> Angeles knows that. Stebie, he don't know that.

Why should I..?!?!

You screwed up a very simple bit of "electronics industry" trivia
that a "man" of your years service shouldn't have screwed up...

> I've worked for RCA Corporation. RCA no longer exists except
> as a logo now owned by Thompson CSF. RCA Corporation was ONCE
> NOT "RCA Corporation." Amazing but true.

Yep.

But not germane to this thread.

> I've worked for Hughes Aircraft Corporation...(SNIP)

Good for you. But not germane to this thread.

> I've worked for the Rocketdyne Division of Rockwell
> International.

Woooieeeee...Still not germane.

> I've worked for contractors to JPL...(SNIP)

I am sure you did. They're still looking for the brooms you were
assigned.

> I've worked for Micro-Radionics, Inc...(SNIP)

How is that germane to your screw-up about Motorola, Lennie?

> The corporation CHANGES in the radio-electronics world are an
> amazing mass of names and players that few outside of the
> industry can follow in their lineage. MOTOROLA as a corporation
> has existed since 1947...long before Stebie was a frown on his
> pediatrician's brow. MOTOROLA as a corporation, as a logo, as
> a symbol of a major player in radio and semiconductors is
> LONG KNOWN to all of us who work or have worked in the industry.

Well then, There we have it.

Since I wasn't born in 1947, I can't possibly know that Motorola
wasn't a "corporation" in 1940...

Whooooooooooooooooooooops! I >>DO<< ! ! ! !

And YOU screwed it up. Whew!

> Along comes a wounded little batty rooster called Stebie who
> has very little REAL industry experience who got his pukey
> little amateur feathers all disarranged by COMMON INDUSTRY
> KNOWLEDGE known by thousands of others.

Known by thousands of others, BUT SCREWED UP BY LENNIE ANDERSON!

Stings, doesn't it, Your Putziness...?!?!

> Little Stebie don'
> wanna do nuttin' but FIGHT, FIGHT, FIGHT.

It's all YOU want to do, Lennie.

You continue to post in a forum in which you have no vested
interest or practical experience, and post lies, drivvel and deceitful
mistruths.

> Stebie want world black and white, what he say is ONLY truth.

In this case it IS "black and white". There was NO corporation
named "Motorola" in 1940. You were wrong.

> Not so.

Is so.

You screwed up...Now you want to stomp your feet and blame
everyone else EXCEPT yourself for the error.

> Stebie is black mark on today's radio amateur.

Nice try. You're busted...Again...

Stebie go Egypt, take river boat? He on sinking ship in
river denial.

Quick, someone throw mighty macho morseman a hate preserver!

>> Stebie nutcase not good for U.S. amateur radio role model.
>
> Putz.

Shalom. Yu vant latkes wid dat? Oy, oy, such a schlemiel.

Stebie be Yiddish? Have operation, remove excess skin?

Tsk, tsk. Not good for Gonad the Librarian fantasies!

Stebie need blood transfusion from so much blood in eye?
Quick, get type match for "CW-negative"! Stick needle
into own vein, fill up. Plenty other good stuff in
hospital, help yourself to some downers, okay? Be better
for you, lower BP, no get stroke or infarc. Get help from
shrink. You need shrink. Stebie look good in shrink wrap.

Stebie up too late. Not good. Raise BP to dangerous levels.
Stebie identify too much with screen. No comprehension of
others. Stebie awash in fantasies of others. Soon Stebie
vein pop. Pop, pop. Bye, bye Stebie.

We will send flower. Not RIP anything.

Some of us just refuse to be assinine crumudgeons like Lennie.

Big snip to bottom...I think Lennie and John will be fast friends.

> Squawk 77, Mayday!

There haven't been any 64 code transponders in service since 1970,
Lennie.

Of course you wouldn't know that because "aviator" is yet another
thing you are "not" and have no practical experience in...Well...No
experience since 1950-something, anyway...

Sheesh...This just isn't your week, is it?

Mine are taken care of, Brain. They are not lied to, about, or
kept in the dark...Like yours...

> Who's always itching for a fight?"

That would be you. Seems you have a penchant for getting yourself
into situations that require lengthy and snivvelling efforts to get
yourself out from under.

If you'd just tell the truth in the first place or learn how to
express an opinion as opposed to stating something as "fact", you'd be
a lot happier.

No doubt they'll wonder "WTF"...But they'll dig...and they'll find
out...

You don't admire what? YOU stated you admire Lennie.

Were you lying then, or are you lying now?

Almost all of the regulars (and quite a few of the anonymous
posters, too) have spoken out very decisively AGAINST Lennie's vile
parody of the Tomb of the Unknowns...

Except you...

> Do you admire all things about Jane?

Ms Fonda lost all dignity and respect when she sat her butt down
in that weapon's control seat in North Viet Nam.

She chose the path of a traitor as opposed to peaceful protest.

> > Mine is causing painful but non-lethal trauma to those who

Probably just following the example of the FCC itself. I have read that the
FCC dropped the sending test as it was rare for someone to be unable to send
even though they could receive. The more common scenario is that most
people can send faster than they can receive anyway.

No the human brain does the same type of "fill" once they get past the point
of having to copy every single letter manually. Even if they do have to
copy manually as I do, it's easy to fill in the missing letters most of the
time. Of course you have to train yourself not to dwell on what was missed,
a common beginner problem.

Yup. Saw it happen.

>

> code was the one absolutely necessary communications mode
> used by every ham.

When was that, Hans? Hams have been using 'phone since
the 1920s if not earlier. By the early 1930s there were
a handful of hams on SSB.

There *was* a time when license renewal required a certain
amount of time on the air using Morse. But that was gone
by about 1950 or so.

Before 1991, every US ham had to "use Morse Code" at least
once - to get a license.

> It was simple, uncomplicated, easy to use (after some period of
> rather tedious practice) and delightfully low tech.

Still is!

> It was the amateur
> communication mode-of-choice for over three generations.

Which three?
>
> Then, as the giant asteroid was to dinosaurs,
> overnight.....

Not much happened.

Your analogy falls apart in a couple of places, Hans.

First off, the introduction of calculators did indeed pretty much wipe out the use of slide rules. But the introduction of other modes to ham radio has not wiped out the use of Morse Code.

Second, very few people do calculation as an end in itself. They're almost always doing it to reach a goal - as a means to an end, whether it be how many turns go on the toroid to how many studs are needed in a wall 29' 8" long if they're on 16" centers.

But ham radio is largely about radio for its own sake.

The introduction of outboard motors did not kill off rowboats and sailboats. The invention of the bicycle and roller skates did not eliminate walking and running. Etc.

I became a ham in 1967, back when a lot of hams were giving up their separate HF transmitters and receivers for transceivers. That trend had started almost 10 years earlier and by the time I came along the selection of transceivers was greater than the selection of separates.

Yet none of the amateur HF transceivers on the market back then was very good for Morse Code. Almost all lacked sharp filters, RIT, and AGC OFF. Some didn't even cover the whole band! They were SSB transceivers first and Morse Code capability was tacked on. Even the expensive Collins KWM-2 was pretty awful on Morse Code.

I remember hams back then telling me that the use of Morse Code by hams was obviously on the way out, because the big manufacturers were focused on making SSB rigs. Some of them laughed at my efforts to set up a good Morse Code ham rig on a slim budget, saying there would be nobody left to talk to with that mode soon, and that all the 'modern' hams were buying HF SSB transceivers.

It wasn't until the mid 1970s that amateur HF transceivers with decent Morse Code performance showed up on the market. Most of them were made in Japan, or by an upstart company called Ten Tec. Even then things like a sharp filter were extra-cost options.

Yet the use of Morse Code by hams continued, and does so today, 40 years after I was told the mode was all but dead.

> disabilities or not.

That's right.

But remember that the whole waiver thing came about because Papa
Bush wanted to do a king a favor. FCC cited the treaty as the reason
they couldn't just waiver all code tests. Papa Bush was kinda anti-code
because they wanted to get rid of ROs on ships (like oil tankers) and
their salaries.

But said king is now dead. And Shrub thinks BPL is a good idea.

> Now that the treaty makes code tests optional the FCC can't use that

> at all . . ?? . . ?

Sure - but has anybody really asked for that?

Remember it wasn't US hams who asked for waivers in the first place.

Siegfried Kemper AKA two-test wogie wussman, one of Riley's favorite pen-pals wrote:

Here is some more examples of your spelling adventures, fatboy wogie.

"Basios"...word Woger uses when he gets neeeerrrrvous.
"Behing"...a cross between being and behind?

"Coiward" As in peeking from behind his mommy's curtains.
"Feamle"...I think he meant female.
"Losser"...only loser Roger can do it better.
"Ignroant"...typical, considering the source.
"Sluprs"...only Rogie knows what this means.
"Travelled"...a Rogerism, replete with ignorance.
"Postss"...pssst...Roger..that should be Posts.
"Defgenerate"...well, it's Roger's word...
"Faity"...he meant to say Fairy, but you know Roger.

"Ghet" Get a load of Curtain Boy!
"Distribiution"...Roger likes using phonics.
"Biotch"...he meant mod, but his phonics took over again.
"Methjadone"...a West Virginia substitute for Heroin.
"Sumbliminal"...one of Roger's favorites.
"Recepticle"...either of Roger's moist cavaties.
"Cociane"...a West Virginia drug of choice?
"Tiome"...Roger meant to say Time...but his fingers were numb.
"Beraking"...no definition. Could mean 'beraking' the leaves,
"Amny"...Were you in the "Amny" wogie?
"Nlay"...a town in Maylaysia? Vermont?
"Al;ong"...only Wussman knows what this means.
"Becasu"...well, becasu Roger is not the brightest bulb on the tree.
"Seperation". Why? Because Roger cannot "seperate" from his mommie!
"Sisnce" He meant Since, but his pudgy little fingers slipped off the keys.
"gnetically" What?
"provce" (prove?)
"Piuzza" (West Virginia Pizza)
"Schol" (school? Evidently it was "Schol" wogie attended, not school.)
"strill" (still?)
"shoitgun" 12 ga or 20 ga?
"Snoip" (How they spell "snip" in Glen Dale)
"Maturbater". Wiseman does it all the time, he just can't spell it.(leaves a sticky residue on his right hand)
"Coskscuking". It's a Roger thing, as in Lavender Lads.
"Waddleing". Only in Glen Dale, eh?
"Spaeaking". Curtain Boy did this after his second retest.

Still got the pilot's certificate wogie boy. Still have the First Class Phone although it is now expired. So what happened to that Second Class ticket you claimed to have? Seems it morphed into a *Restricted* Radio Operator *Permit*, you know, the one that required no testing, just fill out an FCC form. Wahhhh whooooo, musta been real proud of all the work you put into it to get that one, huh wogie? Worked any DX with that *Permit* lately wogie? Caused any malicious interference lately wogie? Riley would probably like to correspond with you again, maybe ask you retake the ham exam again wogie, so you can be a shinning example of just how easy it is to get a ham license. If wogie can do it, then *anyone* can.
You know what they say, 'third time's a charm'.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!

By the way, my Commercial Phone ticket was issued on July 13, 1960, Dallas, Texas...Date of Expiration July 13, 1965 at three o'clock A.M. Eastern Standard Time, signed by the following FCC officials...Marion E. Apple, Issuing Officer and Ben F. Waple (Acting) Secretary.

Now how about some data on that Second Class you claim wogie?

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!

I've never been able to figure out why people get their chops busted
for referring to "80 meter phone".

Shall we set up a sked on 41 meters, 29 meters, 21 meters, 14 meters, 12
meters, (hey that one is right) or the 10.7 to 10.09 meter bands?

My ARRL frequency chart doesn't show a 75 meter band either.

Yup. Saw it happen.

>

> code was the one absolutely necessary communications mode
> used by every ham.

When was that, Hans? Hams have been using 'phone since
the 1920s if not earlier. By the early 1930s there were
a handful of hams on SSB.

There *was* a time when license renewal required a certain
amount of time on the air using Morse. But that was gone
by about 1950 or so.

Before 1991, every US ham had to "use Morse Code" at least
once - to get a license.

> It was simple, uncomplicated, easy to use (after some period of
> rather tedious practice) and delightfully low tech.

Still is!

> It was the amateur
> communication mode-of-choice for over three generations.

Which three?
>
> Then, as the giant asteroid was to dinosaurs,

> overnight.....

Not much happened.

Your analogy falls apart in a couple of places, Hans.

First off, the introduction of calculators did indeed pretty
much wipe out the use of slide rules. But the introduction of
other modes to ham radio has not wiped out the use of Morse
Code.

Second, very few people do calculation as an end in itself.
They're almost always doing it to reach a goal - as a means
to an end, whether it be how many turns go on the toroid to
how many studs are needed in a wall 29' 8" long if they're
on 16" centers.

But ham radio is largely about radio for its own sake.

The introduction of outboard motors did not kill off rowboats
and sailboats. The invention of the bicycle and roller skates
did not eliminate walking and running. Etc.

I became a ham in 1967, back when a lot of hams were giving up
their separate HF transmitters and receivers for transceivers.
That trend had started almost 10 years earlier and by the time
I came along the selection of transceivers was greater than the
selection of separates.

Yet none of the amateur HF transceivers on the market back then was
very good for Morse Code. Almost all lacked sharp filters, RIT, and AGC
OFF. Some didn't even cover the whole band! They
were SSB transceivers first and Morse Code capability was
tacked on. Even the expensive Collins KWM-2 was pretty awful
on Morse Code.

I remember hams back then telling me that the use of Morse Code
by hams was obviously on the way out, because the big manufacturers
were focused on making SSB rigs. Some of them
laughed at my efforts to set up a good Morse Code ham rig on
a slim budget, saying there would be nobody left to talk to
with that mode soon, and that all the 'modern' hams were buying
HF SSB transceivers.

It wasn't until the mid 1970s that amateur HF transceivers with
decent Morse Code performance showed up on the market. Most of
them were made in Japan, or by an upstart company called Ten Tec.
Even then things like a sharp filter were extra-cost options.

Yet the use of Morse Code by hams continued, and does so today,
40 years after I was told the mode was all but dead.

Greetings from the Main Line. Philadelphia Story, Kate Hepburn and all that. No calla lilies, though.

> There was always the Q-multiplier for us money challenged folks ;)

Kinda surreal to see a Q-multiplier tacked onto a KWM-2...

They did work, but were really only decent if the IF was below about 500 kHz. Which wasn't the case with most transceivers.

Oddly enough, IIRC, the notch filter in the esteemed Collins 75A-4 is actually a Q multiplier set permanently in the notch mode.
>
> Heathkit Q-1, was it?

Heathkit QF-1. I had one hooked to my Heathkit AR-2, almost 40 years ago. First nonhomebrew SW receiver. The Southgate Type 1 was better.

About a year ago I was given another QF-1, which became hamfest fodder. They're actually worth a few dollars if they're in good shape.

There's also the Heathkit QM-1 Q-meter, completely different animal, piece of test gear. Very useful gadget for evaluating RF coils and caps. Had one for a couple decades now, found it at the Rochester Hamfest back about 1978 or so, when I lived on Main Street in Palmyra. Not a Boonton but it does the job and weighs a lot less.

> I had one and it did a decent job with that lousy
> Halliscratcher S-20R.

Only Hallis I've owned were the SX-99 (OK rx, but a BC-453 with converter
is much better) and the SX-101 ($35 at SJRA hamfest - about fifty cents a pound). '101 was probably their answer to the "flimsycrafters" complaints.
All gone now, rather build or assemble my own. (One builds homebrew but assembles kits).

Summer's almost here. AWA museum and annex are just down the road from you.
Enjoy.

Because 80 is CW/data and 75 is phone/image.

Look at FCC rules 97.301. They actually list 80 and 75 as different
bands, like 40 and 20. I'm not making this up.
>

The wavelength of 80 meters translates to a frequency of 3.750 Mhz, which (for right now) just happens to be the precise dividing point between CW/Data and CW/Phone bands. If the phone band-edge drops down to say 3.700, then 80 meters will be a phone frequency.

I wonder if WWV will mind if I stroke up my AL-1200 on 15 meters, 20 meters or 30 meters?

Hi, gang

How about a guess as to how many days we have to wait for a subject that is actually *on* topic?

I'll guess 60 hours.

Any takers? LOL

Any chance of stopping the flames? Didn't think so ... but ... in any case, any guesses as to how many hours (or days) before another on-topic subject?

Good question!

I say yes, *if* the definition of SO2R is being able to operate on two bands almost simultaneously. Two or more frequencies in the same band is a different story.

Most stations engineered for SO2R expect the radios to be on separate bands (self QRM'ing issues if on same band) but why would you consider it a "different story" if both were on the same band?

As background, some consider SO2R an "unfair advantage" in the SO class, while purists claim that SO is SO, regardless of how many radios they can manage, so long as only a single transmitter is active at any given point in time (In other words, you can't CQ on your run frequency when working a Q on your mult radio.)

2683. The Pool

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-11 01:22:20 UTC
From: N2EY@AOL.COM
Message-ID: <1118452940.891132.70140@g44g2000cwa.googlegroups.com>
Source record: 110016

Here's an update on the "when will FCC drop Element 1?" pool.

Note how almost everyone's date, including mine, has already
passed:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW:May 22, 2005
N8UZE: July 1, 2005
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction? If so, the "rolling rule" (thanks
Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can
add a new one.

At this point N3KIP and everyone before him can add a new prediction.
All predictions stay on the list.

I don't doubt you. But it seems a little odd to decide that phone is 75 and CW and data is 80. If you are at the bottom of the band you are at 85 meters. Same difference. (actually more, percentage-wise) So why would hams who insist on the precision of 75 phone and 80 CW not also insist on 85 meter CW?

>>Shall we set up a sked on 41 meters, 29 meters, 21 meters, 14 meters, 12

I get 42.8 meters at 7.0 MHz, and 41.067 meters at 7.3 MHz. Yeah, were in the mix there....

Hello, Jim

Well, I lost the original bet. Tell you what, by 2010 there will be no licensing requirements; by 2011, the U.S. of A. will no longer have any ham radio licensees.

Everything will be devoted to either big business, Christian Churches, or the Repooblican party (assuming the brain-dead don't wake up).

Suppose I have a rig with two VFOs. I'm hunt-and-pouncing QSOs on one frequency and listening to the pile on VY1JA on another frequency on the same band. I toss my call at VY1JA at appropriate moments. Is that SO2R or not?

Certainly it's not the same thing as two completely separate rigs on different bands. But it's more than one rig that is on one frequency.

The line has to be drawn somewhere.
>
> As background, some consider SO2R an "unfair advantage"

> your mult radio.)

The difference (to me, anyway) is that multiband SO2R essentially takes two complete stations capable of simultaneous operation even if they're both not in transmit mode at the same moment.
That's where the line is - for me.

OTOH, it could be argued that as long as there is only one signal actually transmitted at any given time, and only one operator, there's only one "station", regardless of how much hardware is involved.

Now for a topic in the opposite direction: How about an "Iron" category (as in "Iron Chef" or "Ironman", etc.).

One rig at a time, only. No second VFO, receivers or memories. No computer logging. No memory keyers for voice or code. 150 W maximum

power.

Oddly enough, in the "old days" the frequencies were simply listed - no mention of wavelength at all. Using the old designators, 3500 to 4000 kc. was A1, 3500 to 3800 kc. was F1, 3800 to 4000 kc. was A3, etc.

> If you are at the bottom of the band you are at

> would hams who insist on the precision of 75 phone and 80 CW
> not also insist on 85 meter CW?

Precision has nothing to do with it. They're just simple shorthand names that go way back.

> >>Shall we set up a sked on 41 meters, 29 meters, 21 meters, 14 > >>meters, 12
> >>meters, (hey that one is right) or the 10.7 to 10.09 meter

>
> I get 42.8 meters at 7.0 MHz, and 41.067 meters at 7.3 MHz. Yeah, were
> in the mix there....

As the SWBC moves away, things get better on 40.

OK, here's one to toss around:

Right now we have 9 HF/MF bands, plus some spot frequencies in the "60 meter" region.

Suppose that at some point we hams had the choice of either:

1) New, very narrow bands elsewhere in the HF/MF spectrum (say, 2.5 to 2.6 MHz, 6.0 to 6.1 MHz, etc..

or

2) Widening of existing bands and/or change to worldwide amateur. Such as 7.0-7.4 becomes worldwide exclusive amateur, 10.1 to 10.2 does the same, 14.0 to 14.4 (which the band used to be), etc.

Which would be preferable, if we wound up with the same number of kHz overall?

No. At best it's SO1.5R.

> The line has to be drawn somewhere.

The line has already be drawn --- SO. The purists maintain that whatever an SO can do to improve his ability to run up a score should be allowed. I'm inclined to agree.

> The difference (to me, anyway) is that multiband SO2R

I wouldn't be in favor of such a category. To me, one of the attractions of radiosport is that it encourages pushing the limits (within good ethics) and thinking outside the box on several levels: innovative station design, battle strategy, skill development, and taking advantage of every available technology. Your "Iron" category seems like putting hobbles on Secretariat in the Preakness. Diana Moon Glompers, the General Handicapper, would love the category! (Think KVG/HB)

That's seldom the case, there are usually two xcvrs networked into the overall system with a single fast-bandswitching amp and usual relay-switched antennas. Or a tribander for the high bands.

> OTOH, it could be argued that as long as there is only one signal

Yet at the same time, there are usually power classes so the QRP' er
isn't up against the big gun. In some contests, packet spotting puts
you in a different class.

So there is a precedent for different categories.
>
> > The difference (to me, anyway) is that multiband SO2R

Sure - but does anyone do those?

What about multiple simultaneous transmissions - say, calling CQ on
more than one band at a time?
>

Yet at the same time, there are power classes, and packet spotting
puts you in a different category.

> Your "Iron" category seems like putting hobbles on Secretariat
> in the Preakness.

Not at all! No one would have to be in that category if they didn't
want to be. It would be optional - an alternative only.

How about this:

Suppose someone builds a true robot station - automated sending and
receiving. Sure, it won't handle QRM well, but when things aren't
jumping in a domestic contest like SS, it could do the job on a slow
band while the op eats, goes QWC, or takes a rest. Or maybe works
another band.

Or maybe not a total robot station, but rather a "new one finder".
Computer-controlled receiver scans up and down each band, looking for
callsigns that are not in the log already. Alerts the op to a new one
automatically. There could be several of them, scanning each band
simultaneously. (Useless early in the
contest, but as time goes on they could be very helpful).

How about putting the entire FCC callsign database in the computer in
such a way that the op is given "pointers"? These "pointers" could be
things like "callsign not in database", section/state/country, etc.
Could give best-guesses from partial callsigns too.

Would those things be OK in SO?

<N2EY@AOL.COM> wrote

> Yet at the same time, there are usually power classes
> so the QRP' er isn't up against the big gun.

Makes sense to me. I don't think a 5W station out to be required with a 1500W station. But within those power classes each operator ought to be able be a creative as he desires in how he configures his station.

> In some contests, packet spotting puts you
> in a different class.

Packet spotting is a form of outside assistance, in effect a "Multi-Op" effort. An SO entrant ought not be required to compete with Multi-Ops.

> What about multiple simultaneous transmissions - say, calling
> CQ on more than one band at a time?

No contest (that I know about) allows that in SO category. "Single transmitted signal" is what defines SO.

> Suppose someone builds a true robot station - automated
> sending and receiving.

It would be a novelty, but not competitive. There is in fact a standing "challenge" (side bet) for anyone who can field a robo-contester in one of the popular events, maybe ARRL DX. Forget the details, but it must be able to "participate" in the contest for some minimum time (6 hours?), and submit it's own log untouched by human hands.

> Or maybe not a total robot station, but rather a "new one
> finder". Computer-controlled receiver scans up and down

That's a logical extension of SO2R, and I believe that the station designer who makes it work ought to remain in SO category and not be "punished" for his innovation and design effort.

> How about putting the entire FCC callsign database
> in the computer in such a way that the op is given
> "pointers"? These "pointers" could be things like
> "callsign not in database", section/state/country, etc.
> Could give best-guesses from partial callsigns too.
>

> Would those things be OK in SO?

Similar things already exist. CT and NA both have a feature called "Super Check Partial" which provide "matches" from a database of calls harvested from previous contests. For example, if you enter the partial call "K0H", it will show you several choices of calls like K0HA, K0HB, SK0HL, IK0HBN, all of which contain the sequence "K0H". Because that's information not gathered "off the air during the contest", purists consider it "outside assistance" and feel it should disqualify the entrant from SO and place them in an assisted category.

Purists draw only this line between SO and "multi-op" or "assisted". Every bit of information which goes into an SO log must be gathered off the air during the contest period by a single operator and his equipment without outside assitance such as packet clusters, harvested data-bases, and similar aids.

I am not ignorant at all.

All of "us" have DIRECTLY addressed his vile and demeaning
"parody" of the Tomb of the Unknowns.

You have not.

Why? Coward?

> > > Do you admire all things about Jane?
> >

It doesn't matter WHERE I was. She's a traitor. Documented in
countless testimonies. Not a one of those testimonies has been
challenged, by Fonda or any person or entity on her behalf.

> > She chose the path of a traitor as opposed to peaceful protest.
>
> You chose your path, and the no-servers chose theirs.

The "no-servers" have not broken any laws.

As for the path I chose, yes, I did. As did you. Too bad you
wound up with the reputation of being a chronic liar, eh...?!?!

What weasel words?

I wasn't aware that weasels (other than you and Lennie) were able
to communicate, let alone have a vocabulary.

<Aw, gee. The suck-up factor has increased by leaps and bounds. We have a
sixty something retiree bolstering and encouraging a late seventy something
retiree as they back slap one another on a job they think is well done.
What fun. One is awaiting his Social Security check and the other is casting
downward glances to make sure the elastic on his Relys is not leaking. A guy
can ruin chairs that way.

Ya gotta love these doddering old fools. One tries to enhance the other
while at the same time they are stumbling over one another in an effort of
one upmanship.

"Yeah, Len, you are cool. My idol."
"Dittos, John."
"Who should I denigrate next, Len?"
"Oh, take your pick."

"Let me give it some thought, Len."
"OK. Take your time. I have to change my Relys."
"Understood. I have to do the same. By the way...do you use Lite Days or
Nite Days?"

...and the tale of the weak-bladdered duo is to be continued.

I'd vote for the 2nd one. In my opinion, the bands we have now are nicely
space to take advantage of variations in propagation. However, I'd like a
lot more room on both 40 meters and 30 meters. If 30m could be widened,
then a phone section could be added.

Mona wrote:

> ...and the tale of the weak-bladdered duo is to be continued.

Your own anonymous status notwithstanding, this is not an unusual situation. Once every 6 months or so an anonymous "LennieFan" pops up, glad hands Lennie for a few days or couple weeks, then disappears as quickly as they arrived.

Lennie's only NON-anonymous fans have been very few. First on his list is Brian Burke, N0IMD. "Brain" is himself an archived chronic liar and has numerous character issues unresolved. He cowers behind "bb" and won't sign his name or callsign to posts alledging "spam mitigation". Bunk.

"Brain" has a laundry list of unanswered, unresolved questions going back over 5 years, yet he tries to hide his inadequacies behind false and misleading spindances against me.

The fact is that he's not only been caught with his britches down more than a fifty cent hooker on payday, but they are dragging behind him, tattered and forever unrepairable and unserviceable. Did it to himself, though...He keeps running headlong into that brick wall then complains about the headache.

There's Vipul Shah, KB1HMW. Actually, Vipul started out as "anonymous", but with a bit of research I "outted" him. What can we say about Vipul? I am sure he's basically a nice guy, but he's one of those immigrants who seems to think the entirety of the United States is going to morph into something HE can understand, rather than him adapting to the enviroment he's in. He carries that through to Amateur Radio, and has suggested on several occassions that Amateur Radio would be much better off if "we" saw things his way instead.

His primary motive for being in Amateur Radio, apparently, is hitting on "preeti fems". Now I've been an Amateur for several decades now, and have, on occassion, met a female Amateur who turned heads smartly, but they are far and very few between, and usually the spouse of some 6'3" linebacker named "Rocky". Anyone who got an Amateur ticket to "meet babes" is going to be sorely disappointed! Lord know's I've looked!

And let's not forget how buddybuddy Lennie and Todd Daugherty, N9OGL were a couple weeks ago...Need I say anything more about Todd? Foul mouthed, functionally illiterate, and too stupid to cover his own tracks when leaving ugly e-mails. But it doesn't surprise me...Lennie likes to punctuate his rants with a burst of profanity from time to

time, so I am sure he was right at home. However Todd holds the crown...Now if he can just find another ISP since his foul, irresponsible mouth got him booted from the "local" service in Taylorville, IL.

Now we suddenly have "John". Allegedly a middle aged Amateur of unknown years experience, unknown level of licensure, unknown organizational affiliations, memberships, etc..."John" may very well be a "real" person (read that as "not a figment of Lennie's imagination") but I doubt it. It would not be above Lennie (or beyond him) to create yet another anonymous "buddy" to help him get through a rough time in the NG. It's happened before. I may be wrong, but that duck sure is quacking pretty loudly.

In over 7 years of "membership", name ONE person who has suffered anything more than a bruised ego as a result of anything I've "said" or "done" here, Anonymous Coward.

The answer, of course, is "zero".

People post anonymously because they have something to hide...Usually an over active sense of paranoia. No doubt YOU are sitting there with an aluminum foil brain protector on, hoping that black helo outside your window goes away soon.

Coward.

the rules of contests are up to the individual sponsors. contact the
specific organization that runs the contests if you want to try to convince
them to change their rules. general discussions in open groups do little
besides generating lots of messages that aren't getting to the targets that
can make the changes. you might also want to look at the details of some of
the larger contests, there are some that have things like a 'tribander and
wires' catagory, or the 'limited multiop', or 'band limited single op', and
even the various single band or single mode entries for those who either
can't or don't want to compete with the all band guys... and then of course
most contests have low power and qrp catagories where there is much less of
the so2r type of operation.

I don't think we expect that this discussion will be acted on by the radiosport sponsors, but can't we have the discussion, just for discussion sake? (You don't need to participate if you'd prefer not to.)

> and then of course most contests have low power and

Actually the LP layer (100-150W) is where the greatest number of stations specifically engineered for SO2R seems to be. Surprising on the surface, but makes a lot of sense when you consider the issue of self-induced noise.

> Contesting hardware has evolved to the point that one must spend a small
> fortune to be competitive.....

I don't think money is what makes you competitive. Innovation and thoughtful design of your station, honing your skills, and picking the fights you can win are what make a station competitive.

I'll use my station as a prime example. In the major contests in which I compete I have an excellent record of success with lots of section and division wallpaper and walnut on the wall. Any time I get whupped it's due to better operators, not the cost of the station.

My SO2R setup consists of a 10-year-old Icom run rig and a 17-year-old mult rig. The city-lot antenna farm consists of a single tower with a tribander, a selection of wire antennas, and a couple of verticals. Station control is an 8-year-old 'consumer grade 486', CT by K1EA (freeware), and homebrewed SO2R-relay/wiring system. "Hamfest value" of the entire station is well below the "small fortune" level.

You only need a "small fortune" if you're adverse to a little "sweat equity" and decide to buy it all at 1-800-rigs-r-us.

In fact, if you depend on "rigs-r-us" to win I'd guess your station probably could benefit from some thoughtful design efforts, not more money.

73, de Hans, K0HB

2716. Steve mishandles even small amounts of truth

If you say that "MARS >>>IS<<< Amateur Radio," and you did.

And you say that he is the Chief of MARS, and you did.

Then you are saying that he >>>IS<<< the Chief of Amateur Radio.

> However he DID state that MARS and Amateur Radio WERE a "service to
> the nation"...

Jimmy the Riveter was supposed to be a "service to the nation." Jimmy
the Riveter is not the Chief of Mars.

Not interested then. Not interested now. Your strangle hold on the
amateur service may not end until the actuarial tables kick in, but
they will end.

Jimmy the Riveter has "The Poll." That's semi-on topic, and he even
included Kim's callsign.

WRT stopping the flames; Just have Robeson quit lying and everything
will level out. Can you do that?

no... the old hams have become as out dated as regen receivers... they
may think no ones notices... we do... it is ok to fool others, but when
you only end up being a fool from your efforts you have failed to stop
listening to others telling you about it... you now go on to tell
everyone else "how it is"--failing to comprehend that everyone has
already stopped listening...

A legitimate assessment.

> ... Where do they get these guys from?

I'm guessing that he's the product of an overdominant maternal figure
and all that goes along with it. Mad at the world for having been
raised a sissy, he over compensates by becoming a Marine. That doesn't
work out, so he resigns himself to what he is and becomes a nurse. The
pieces seem to fit, but it's just a guess.

I can beat that setup under certain conditions. The
reverse is also true. All depends on the situation.

For example, can that setup function with the operator's
eyes shut?

But that's really not the point. Using a keyboard and code
reader means you're doing a form of RTTY that happens to
use OOK Morse instead of, say, ASCII FSK as the encoding
method. If that's fun for you, enjoy!

But it's not the real issue.

> You mean to tell me people actually use "real keys" still--

Oh yes. I have a choice of four Vibroplexes, and a J-37 straight
key. Wonderful instruments.

> gawd, I thought all those sk <tongue-in-cheek>

I'm younger than you, John.

Some analogies:

- Someone in fair physical condition can beat the fastest marathon
runners in history - if the someone uses a bicycle. That doesn't make
the someone a marathoner.

- Someone else riding a Harley can win the Tour de France easily. That
doesn't entitle them to the yellow shirt.

- There are plenty of boats that can win the America's Cup against all
challengers - but they're not allowed to compete, because those boats
have engines instead of sails.

Get the idea?

I don't even have the files in CT and I'm with the purists on this one.

> Purists draw only this line between SO and "multi-op" or "assisted". Every bit
> of information which goes into an SO log must be gathered off the air during the
> contest period by a single operator and his equipment without outside assitance
> such as packet clusters, harvested data-bases, and similar aids.

I'm with K3ZO on the SO2R scene: It is a lot of extra work and trouble
and I'm of the opinion that a good SO can usually equal or beat the 2R op.

I don't think automation has necessarily been a good thing for
contesting. Computer logging aside, it has removed a good bit of the
"fun factor" in contesting. I've never even used the keyboard or
computer for sending during a contest and don't do much with a memory
keyer. I'm beginning to think that Father Time and automation have
combined to reduce my interest in going for score in most contests. I
find that my interest in single band efforts is increased, mostly
because it allows me to get some sleep.

Not Jim specifically, but all the Pro Code Test Advocates (PCTA). I think it was Goethe who said something about new ideas not being accepted until those who cling to the old ones have died. It has to be said that there is some truth in that.

I think that the FCC will abolish the code test before we get that far, though. They are taking their sweet time, though. My XYL is waiting on this event to go for her General, so that's my main interest.

More countries abolish the code test all the time, although it's slowed to a trickle. I think Spain ditched the code test quite recently. OTOH, I think Italy may be one of the very few holdouts in Europe, but I think it is merely a delay. Canada looks set to do it soon, but has looked that way for a while, LOL! It will happen here too, but will have taken so long that some people will be shocked by it, as they will have pretty much forgotten about it by then.

I don't think I'll add another date. I think it will be this year, though. All right, put my second guess as December 31st, 2005.

If that so, an examination of their log side-by-side a print out of the cluster log is an easy DQ. Rather than put the cheater (genie)back in the bottle, a quiet note to the contest sponsor with evidence will expose them.

SO2R has a huge learning curve (more like a learning "cliff"), and a casual or inexperienced operator whose station isn't optimized for SO2R will flounder. Having said that (and god forbid I disagee with Fred) but a skilled/experienced SO2R op in the chair at a well engineered 2R station will bury an equally skilled/experienced SO.

Nope, those guys are just expressing opinions. If there's a "choke hold" (and I don't agree there is), then it's the FCC with their hands around the throat of the ARS.

Here's an update on the "when will FCC drop Element 1?" pool.

Note how almost everyone's date, including mine, has already
passed:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004 (first prediction)
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW: May 22, 2005
N8UZE: July 1, 2005
N3KIP: December 31, 2005 (second prediction)
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction? If so, the "rolling rule"
(thanks Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can
add a new one.

At this point everyone before N3KIP can add a new prediction.

All predictions stay on the list.

73 de Jim, N2EY

I recall an oldster on here bragging that he could send code so badly that a No-Code Technician with a code reader couldn't copy it. All of the other oldsters on here covered for him by claiming "banana-boat swings" and other excuses for having a "unique" and incorrect fist.

That and the Farnsworth debacle led to the discovery that the FCC has absolutely no working definition of Morse Code, yet the FCC denies people access to hobby radio every day based upon an exam for something which they no longer have a definition for.

Probably the latter. Certainly a lot of small bands would be very
interesting. There would be a fair amount of equipment going out of use,
which would be a shame. No doubt modifications could be made, but with
many bands, the old equipment only has so many switch positions! 8^)

That claim is incorrect.

> Gee, I didn't know!

Me neither.

> Hey, Jim --- loosen up and let me breathe!

;-)

It seems very odd that I'd be accused of having a stranglehold
in a thread where all I did was post people's opinions about
when FCC would drop Element 1.

If it were up to me, all amateur radio licenses would require
at least a 5 wpm code test. And they'd all have better (not
harder) written tests too.

But it's not up to me.

So I'll continue to give FCC my thoughts, ideas and opinions
on the issues, and my reasons behind them. Maybe FCC will
agree, maybe not. Hardly a "stranglehold". Just democracy
in action.

The Glendale Lavender Lads monthly meeting will be held tonight, at you know who's house. You Know Who just called and said his monthly SSI check came in, so there will be plenty of eats. Also, You Know Who said he finally removed his antennas from blocking the public sidewalk, so there will be no visits from city code enforcement officials today. Best of all, You Know Who had his monthly mental health check up, and the doc said he still has major mental health issues, so lets all prop up You Know Who tonight.

That depends on what you mean by "competitive" and "a small fortune".

For some hams, "competitive" means winning outright, or at
least making the Top Ten. For others, "competitive" means
winning their section, or maybe division, or maybe getting into
the top ten of same.

And for others it's simply doing better than last year.

In similar fashion, cost is relative. A $5000 station is small
change to some and beyond others' wildest dreams. Same for many
other spending levels.

Just a few years back, having a dedicated computer in the shack
was a major expense. Not any more!

> spending huge amounts of money on rigs, antennas and any other > hardware which gives
them an advantage.

I disagree strongly!

I think there are many more basic groups, from the casual types
just putting in a few hours and maybe picking up a new state
or country, to the all-out multi-multis, to the middle-of-the-
pack folks, to the special-interest ones (like the QRP types
with incredible antenna farms).

On top of this is the fact that the superstations require
operating skill, knowledge and strategy just like the 100 W
and dipole folks.

> Both groups have good points and neither is superior to the
> other.

Agreed!

In fact the superstations need the little guys in order to make super
scores. And the little guys need the superstations.

> What
> is wrong with contesting today is both groups are combined into > one when

Well, there's division by power level, by multiop vs. single, and
packet spotting.

The trouble is where the lines are drawn.

What does "one radio" mean? Is a second receiver allowed? How
about if the second receiver is built into the rig?

One antenna per band could work a hardship on even some modest
stations. At my previous location I had an inverted V for 80/40
that could be made to work on 20. Also had a 20 meter vertical
with elevated radials. 100 W homebrew transceiver. Hardly a
superstation but I did pretty well.

On 20 the vertical was usually better, but sometimes the inverted V would do the trick. "One antenna per band" would eliminate that.

> The present hardware situation reminds me of a boxer who has

I don't see it that way at all. I think we need an "iron" class for a very different reason.

One thing that makes a contest fun (for me) is the competition. It's radiosport, pure and simple. I think the message that needs to be emphasized more is that you don't need a superstation to have a good time.

I know too many hams with "100W and dipole" stations who think contesting with such a setup isn't practical. And compared to the results of superstations, they're right. But if they could see how they did against similar setups, we might get more of them - which is a good thing all around.

Yep,

And "I am not a crook". (tricky dickey for those who don't or prefer not to remember).

I see they let a guy across the boarder with a bloody chain saw, swords, and lord knows what else. Seems he murdered some folks in Canada. Feel safer? Maybe the guards are only looking for weapons of mass destruction. Of course, he is not gay nor is he of middle Eastern descent, so he must be a good guy. I see a Canadian Senator is most unhappy with the Americans that let the idiot cross the boarder.

I also see they've upping the ante to $40,000 for first time enlistees in certain branches. Almost makes ya want to join, doesn't it? Don't ask; I served in Vietnam. Once around that horn was enough, thanks. Of course, for $40,000 a piece, someone just *might* find the weapons of mass destruction.

Meanwhile, I see they never did find all 80 cattle that came over (allegedly) from Canada when we had that case of mad cow disease. I see we have two new cases. I suspect that everyone is still looking for the weapons of mass destruction.

I noticed a big increase in SUVs around the poor areas near here. Likely due to the big per-child rebate. Certainly helped the auto industries. Last year. Now, folks are probably committed to large balloon payments and won't keep buying SUVs every year. I note that the automakers are in a bit of distress. Maybe we could hire the union guys to look for the weapons of mass destruction.

Smoke and mirrors only work so long as you have an infinite supply of smoke and mirrors.

With all due regards from Rochester, NY

> They are taking their sweet time, though.

Yep - and that may or may not be significant.

> My XYL is waiting on this
> event to go for her General, so that's my main interest.

With all due respect - it's been five years plus since the 2000
restructuring made 5 wpm the only code test. Most people can learn

code well enough to pass that test in 4-6 weeks of practicing
about a half-hour a day.
>
> More countries abolish the code test all the time, although
> it's slowed to a trickle.

That says something. Japan, long the poster-country of nocodetest
amateur radio, just announced reduction but not elimination of
their code testing.

It would be interesting to see a list of countries with and without
code tests.

I think that's way too soon. FCC is obviously going the NPRM
route, and that document isn't even out yet. Even if the NPRM
shows up tomorrow, it will probably have a comment period
lasting months, then FCC will take more months to do the R&O.

The whole concept is way way way to complicated. Also unenforceable.
Will the contest committee send out Hamcops to ensure compliance?

100 watts and a dipole is only about 90 percent of contesters!

> And compared to

My experience is that contests have two different aspects. Operator skill and power. This is assuming that the operator has a receiver of adequate performance. If you have to get rid of one parameter, go with operator skill.

> Steve, K4YZ
>

Quite an enemy's list you have there Robeson, and also no better
example why net savvy people keep people like you at arm's
length, via an anon posting service.

73,

Lloyd

.............................

Valid point.

First, there is no Lennie fan here. I look at blowguts such as he with
disdain.

Secondly, posting anonymously via a paid service such as my Altopia account
is not a mark of cowardice.
This misplaced sense of Machismo is just that...misplaced.

Can you afford $12.00 a month? I can, and it is well worth the expenditure.

For example. bb has posted numerous comments over the months and was taken
aback when Robeson posted his Ham call. It was easy enough to see that Brian
lives at 430 Longview Street in Pickerington, Ohio.

Many others who lurk in these newsgroups do the same. Some nefarious
predators, such as AB8MQ, make it a point to delve into the backgrounds of
those with whom they disagree and then post the information, true or false,
on the Web. This individual has been known to go so far as to falsify
reports about fellow Hams, knowing full well that he will be held
unaccountable while hiding behind anon remailers. He has accused fellow Hams
of being child molestors, accused fellow Hams of being convicted criminals,
and worse. Much worse.
```

You have seen it. The bickering and backstabbing can become quite cruel at times as marked by Wiseman's exceedingly calloused and uncalled for comments about Steve's beloved daughter.

So, before any of you Machismo types puff up your chests and boast that you "have the balls" to use your real name and call sign, think again. Keep in mind that there lurks a social misfit close by who will, given a reason, cause you much discomfort whether it be by late night phone calls or a flood of anon magazine subscriptions.

I make no apology for my Altopia account. None is necessary.

Let's see...who am I now?

Lloyd?
Schwartz?
Stagger Lee?
Lloyd 2?
Arf! Arf!?
Lloyd 3?

Maybe Roger can call Chris Caputo again and ask him who I really am.
Oh, wait. Roger already tried that. Chris responded by giving AB8MQ the boot from Altopia.

To a point, yes. But the guy with 100 W and a dipole at 40 feet isn't
going to win CQWW or even SS no matter how good he is. He's not even
going to make Top Ten.

That doesn't mean he can't do well, just that winning is a different
game.

"Power" is actually signal strength. I'd rather have really good
antennas and QRP than high power and poor antennas.

Winning isn't about being average.

Average sailors in average boats don't win the Americas Cup. Average golfers with average clubs don't win the Masters. Average drivers in average cars don't win Indy. Average jockeys on average horses don't win the Belmont. Average radiomen with average stations don't win CQWWDX.

Life isn't set up to give plaques to "average joes". Winners are above average. Second place is "First Loser".

It's an important factor, though. Always has been. Part of the
game in most contests.

> Innovation and thoughtful
> design of your station, honing your skills, and picking the

"picking the fights you can win" means "have realisitic expectations".

> year-old mult rig.

And they are?

> The city-lot antenna farm consists of a single tower with a
> tribander,

Which is more than many hams will ever have.

And that description covers a lot of ground. "city-lot" could mean an
acre. "Single tower" could be 70 feet or more.
"Tribander" could be anything from a TA-33 to a Force 12 or whatever.

Big differences under that umbrella.

> a selection of wire antennas, and a couple of verticals.

I'll take a dipole at 90 feet over a TA-33 at 40 feet...

> Station control is an
> 8-year-old 'consumer grade 486', CT by K1EA (freeware), and
> homebrewed
> SO2R-relay/wiring system. "Hamfest value" of the entire
> station is well below the "small fortune" level.

"Fortune" is in the wallet of the spender. For some folks, a $2000
station is a small fortune. For others, a $2000 transceiver
is "not competitive".

What's the replacement value of the tower and everything on it?
Not hamfest value - replacement value.

And then there's the price of the real estate to put it all on....

> You only need a "small fortune" if you're adverse to a
> little "sweat equity" and decide to buy it all at
> 1-800-rigs-r-us.

Agreed! In fact, one of the great levelers is the relatively low
price and high quality of used gear. Say, a good clean TT Omni VI+
with all the filters and mods. Close to $3000 back when it was new -
half that today? Less than half?

The computer that was $2000 less than a decade ago can be rescued from
doorstop status and put to work in the shack. Sure, it won't run
Windoze very well, but Windoze 9x isn't a good choice for contesting
anyway.
>
> In fact, if you depend on "rigs-r-us" to win I'd guess your
> station probably
> could benefit from some thoughtful design efforts, not more
> money.
>
There's also the big unknown of real estate. Take SS - the ham in a
rare section has a built-in advantage over the ham in a nonrare one.
The middle part of the country has an advanatage over the coasts. The
ham who can live on a big "city lot" with no restrictions has an
advantage over the one who has less room.
Etc. But that's all part of the game.

But the radiosportsmen take over big parts of the popular HF ham bands
when a contest is on. Which is more than a few weekends a year. There's
no real equivalent to that in the other contests.

And unlike the other contests, getting more radiosport contestants
helps, not hurts, the winners.

> Life isn't set up to give plaques to "average joes". Winners
> are above average.
> Second place is "First Loser".

"Winner" has all sorts of definitions. Winning your section is
one level, winning your division another, etc. Just setting
a personal best score is winning.

Most radiosport contests have several levels of competition.
That's a good thing. My "Iron" class proposal doesn't reduce
or eliminate anyone's win.

The problem, Brain, is that you don't learn when to express your
opinon AS an opinion, and when to express something as an assertion.

You STATED that "...the role of the ARES is overblown..", yet the
very day you did it there were no less than three new items on various
sites about third-party agencies lauding ARES volunteers.

You then also STATED that ARES will not be able to respond
because, allegedly, too many of the members are over extended on
commitments.

I've asked you over and over to provide some substantiation of
those comments, but you simply dodge the questions.

So either way you look at it, you're wrong. You are either so
blissfully ignorant of the enviroment you're in that it manifests as
"stupid", or you're intentionally being deceitful, in which case you're
the liar I have claimed you to be.

In either case, you're the loser.

Oh well.

I wouldn't bet on that, getting a good SO2R station running represents
a lot of work and expense. Adding an amp is a no-brainer in comparison
on both counts. The purpose of a 2R lashup is to have a run rig and a
mult rig instantly available. Since it's difficult to keep those
200-300/hr runs going with a 100W signal all the SO2R ops I know around
here use amps. Analyzing the published scores should answer the
question.

> 29 new lies.

No...you accused me of lying.

You were challenged at each and ever accusation to prove it.

You didn't.

We KNOW who the liar is, and it's not me.

> > > > Almost all of the regulars (and quite a few of the anonymous

Because I didn't threaten anyone.

Veiled or otherwise.

Just like your attempt to misrepresent my comments about Amateur
Radio and MARS, you take one line from a post them try to make it
appear as something other than what it was.

That's why I can say "Brian P Burke is a chronic liar" and know
that you can never take me to court over it.

Because I have the evidence to prove my assertions.

> > > > > Do you admire all things about Jane?

Lacking any credible evidence to the contrary, they haven't.

So says the Constitution of the United States.

> > As for the path I chose, yes, I did. As did you. Too bad you
> > wound up with the reputation of being a chronic liar, eh...?!?!
>
> Hi! I documented a single, three-week lying spree of yours where you
> told 29 new lies.

No you didn't.

You ACCUSED me of lying, but refused in each and every instance to
substantiate your claims.

You never did. Not once.

> > I wasn't aware that weasels (other than you and Lennie) were able

> > >
> > What continues?
>
> Your weasel words and obtuseness. If you are going to threaten me,
> just do so without regard to the consequences. You'll feel better for
> a little while.

What threats?

What consequences?

You accuse me of "threats" vis-a-vis your recent "what is a hostile action" rant. Then when I offer you an example of what I would consider a "hostile action", clearly in response to YOUR question, you make your unfounded accusation.

If you feel threatened, why don't you go right ahead and print off those threads and stop by the local PD to file a complaint. Heck...go ahead and stop byt the FBI since this crosses state lines...

Then when required to respond, I'll bring along YOUR stuff, including your "weasel" wordsmithing, wanton deceit and blatant lying and overt attempts to make false accusations of your own.

Oh...and I'll being along the ENTIRE post that you continue to misquote from vis-a-vis "slashed tires", etc, just so they can get "the big picture" on what your TRUE character is all about.

That ought to set your reputation with law enforcement. It's sure done it here.

Steve, K4YZ

Read the Report and Order for 98-143.

The comments most quoted by FCC in its restructuring decisions
weren't those of ARRL, NCVEC, or even NCI. Not those of any
individual, either.

The comments most quoted by FCC in its restructuring decisions
were those of Kenwood of America.

"The CO2 suppository is one of our most popular items. Simply moisten
and insert as far up in your rectum as possible with your finger, wait
between 15-30 minutes and you will feel an intense need to use the
bathroom. The gas generated by the suppository forces out material in
your rectum... Our CO2 suppositories combine Sodium Bicarbonate and
Potassium Bitartrate to generate approximately 150cc's of carbon
dioxide (CO2). The release of gas gently distends the rectal ampulla
and forces the matter in your bowels out, leaving you clean and ready
for fun...."

Actually the contest sponsers have gotten pretty good at detecting
those bad boys. They've developed software which automatically combs
thru logs and looks for patterns which indicate who did what when spots
show up. Lotta those guys scores have been tossed.

> > That's a logical extension of SO2R, and I believe that the station designer who
> > makes it work ought to remain in SO category and not be "punished" for his
> > innovation and design effort.
>
> I disagree. The robot is, in effect, a second op.

I also disagree because when you get right down to it it's functionally
the same as using the spots. If it worked well enough though it would
probably be better than the spots because it would be "operating" under
the same propagation/reception condx as the rest of the station.

You can waste a lotta time chasing spots even if they are posted by
locals. Sure, the guy three Zip codes over with his 3EL 40M beam @ 150
feet can easily pick off that JT. But I'm sitting here with my weenie
dipole @ 40 feet and I can't hear a peep from the JT. In the meanwhile
I've wasted two minutes on a spots-induced wild goose chase.

> I'm with K3ZO on the SO2R scene: It is a lot of extra work and trouble

It's certainly a lot of extra work and trouble I wouldn't even think
about getting into. But I'm not "everybody", involves the mindsets of
the specific ops. The hardcore types could care less, to them it's just
one more hill to climb to get even-up with their competitors. In many
cases they actually *enjoy* all the complexity & work. Money be damned.

> and I'm of the opinion that a good SO can usually equal or beat the 2R op.

Published scores trump opinions David.

> I don't think automation has necessarily been a good thing for
> contesting. Computer logging aside, it has removed a good bit of the
> "fun factor" in contesting.

Depends on where the op gets his jollies. One of the local EEs doesn't
do much operating but he's the guru of gurus nationally when it comes
to designing/building wonderous 2R and M-M black boxes and running the
Spider spots network. Different strokes for different folks top to
bottom in contesting.

> I've never even used the keyboard or
> computer for sending during a contest and don't do much with a memory
> keyer. I'm beginning to think that Father Time and automation have
> combined to reduce my interest in going for score in most contests.

You have a *huge* amount of company on this one. My iron-bottom days
are *long* gone. Geez, dunno how many times I did 40-48 hours at some
multi-multi or another back when. Back when I was 30-40 something of
course. These days my critical piece of "automation" is my alarm
clock.<groan>.

> I
> find that my interest in single band efforts is increased, mostly
> because it allows me to get some sleep.

Less hassles all 'round. I have antenna installation restrictions and
electrical noise here but I'm hoping to squeeze a 20M antenna up and go
100W S&P mode simply to keep the my dust & rust level down.

On one particular issue.

> Their numbers will decline with attrition, and then it will
> show up as an apparent shift of opinion.

The presumption is that the newcomers will have a higher percentage of
NCTA folks than currently exists. Maybe
that will happen and maybe it won't.

Back in 1996, the ARRL-sponsored READEX poll on various
codetest issues showed that the most procodetest age group
was the *youngest* hams.

Let me put it another way:

When a statement reads as a fact, with no qualifiers like "I think" or
"IMHO" or such most people read it that the writer
is stating a fact.

A person can hold whatever opinions they like. That does not
mean all opinions are equally valid. A person's opinions can
be based on true facts and valid logic, or not. Doesn't make
the person a liar, just a poor thinker.

There's a third possibility, Steve:

That statement could simply be an opinion. The person starting it has chosen not to back up that opinion with facts. Doesn't make them a liar. It does show that they can't back up their opinion with facts, that's all.

2795. K1MAN RECEIVES LARGE NAL

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-12 18:22:56 UTC
From: Jimbo <jim_haynie@myway.com>
Message-ID: <1118600575.968095.314510@g14g2000cwa.googlegroups.com>
Source record: 109977

On June 7, 2005, K1MAN received an NAL from the FCC in the amount of $21,000. K1MAN had the option to pay up, ask for a reduction in the amount of the fine, or to dispute the validity of the NAL. As usual, K1MAN has decided to deny any responsibility for his actions. The FCC will publish the reasons for this NAL at their enforcement bureau website at their earliest opportunity. The address is:

http://www.fcc.gov/eb/FieldNotices/

Please Reference:
File. No. EB-04-BS-111
NAL/Acct. No. 200532260001
FRN 0013164975

We believe this NAL represents a strong and justifiable statement regarding Amateur Radio Enforcement. As responsible amateurs, we should not tolerate rules infractions, or the ridiculous and juvenile antics sometimes heard on our amateur frequencies. Hats off to the FCC for taking this long-awaited enforcement action! Hopefully, K1MAN's license will NOT be renewed in 2005.

John, that's the model that N...@aol.com tried to fly in here
several years ago. [I can't write his name in here because
N...@aol.com doesn't like being called names...:-)]

Others have tried this, of course, but that is just the usual
psy-war tactics they attempt (unsuccessfully) in words. :-)

>--OR--
>
>"Once I can prove a point wrong in any of your posts--anything you have
>to say from then on is LESS IMPORTANT than my text"

I would say that's only slightly close. It's a DOMINANCE ploy
they are attempting...that of intimidating and dominating the
newsgroup sufficiently that they emerge APPARENT winners. They
only wind up being little weiners.

>... Where do they get these guys from? Even though the younger
>generation is much more educated than just a few decades ago--dinosaurs
>still walking the earth is an amazing sight!!! <grin>

Tsk. Yes, amazing. Toothless Tyranosaur Rex roaring rage and
hate, standing only five feet high. Strikes terror in the hearts
of mice. Yawn. :->

Stebie da Wundermarine done manufactured some kind of word battle
on MOTOROLA...saying "it didn't exist before 1947." :-) Actually
the brand name was already indistinguishable from Galvin Mfg prior
to WW2 and the 1947 corporate name change wasn't any more than
some legal paperwork filing and a lot of letterhead changing in
Chicago.

Chicago: Always seemed a NON-center for electronics and radio, yet
that is the city and suburbs wherein existed the Bill Halligan works
better known as "Hallicrafters." [long since gone...RIP] Western
Electric's main facilities were in Chicago and next to it was
Graybar, the distribution center. The Siragusa brothers founded
Admiral Corporation there and made TV sets (and radios) for decades
with divisions spread all over the suburbs and nearby small cities.
Zenith Radio began there. Teletype Corporation began there, about

the same time as Bill Halligan started up. Lots more "smaller" firms in that area...but disregarded by the easterners because the "town by the lake" isn't in their center of the universe.

If Gonad the Librarian wishes to follow-up, he can point and shout about MOTOROLA headquarters at SCHAUMBERG, IL, >>not<< "IN" Chicago! He could have an orgasm of messaging (and probably will) yelling all about LIES, LIES, and more LIES!!! :-)

In reality, Hallicrafters is DEFUNCT. So, in essence, are Admiral and Zenith (Chicago went from "A to Z"). Teletype is no more but their corporate trademark is indelibly synonymous with THE tele-printer. Without checking for absolute, poselute "accuracy," the MOTOROLA corporate headquarters may have moved a long distance away...perhaps to make room for Boeing Aircraft (in a weird move from the long-established Hq home in the northwest USA in/near Seattle, WA).

Nursie Worsie is an "expert" on electronics corporations in the USA because he read a lot of QST ads and "worked" for less than a half year as a purchasing agent for a small set-top box maker. It's wonderful that there are SO many amateur "experts" here that check everything, determine if the I is dotted and the T crossed, then berate/admonish the "guilty" on the slightest infraction. Watching them hop up and down in rage is like watching a 2-dimensional puppet with a single yank string pulled to make their flat arms and legs wiggle. ;-)

I'm going to spend the next week at this year's Microwave Symposium down by the seashore. Back to the reality of the REAL radio business and REAL advancement of the state of the radio art. I'll leave the "art pioneering" to the amateur starving artists "manufacturing" their ever-regenerative regenerative detectors. [for less than $100, of course]
Oh, and ponderous pontification on CONTESTING in "radiosport" wherein all the "great ones" are making their bids for laurel wreaths and immortality as gurus of radio. Yawn.

Good observation.

Nursie Worsie is going to say it is all a LIE, LIE, LIE!!! :-)

Stebie da Wundermarine wasn't born and raised in the conventional
sense. It was issued from a USMC supply room, outfitted with a
scowl and swagger stick, and pointed towards seven hostile actions
and told to kill, destroy. The rest is history...as read in the
rest room.

Gonad the Librarian will want to speak to your wife again and
lecture your kids. He can't get enough of others' wives.

Dr. Killgore will thumb through a 1987 Physician's Desk Reference
to see what sort of rage-inducers he can filch from the hospital
drug room. [Sharps box keys were yanked off his key ring]

K4CAP will be "Pilot in Command" of a recon flight to Ohio and
check out your street address, scowl hidden behind gen-u-wine
aviator sunglasses as he arms the Cessna's "cannon."

Last Action Hero will berate "Lennie" and threaten charges of
Treason while he chugalugs the caffinated cola so he can piss
all over himself in here again.

Stebie's personalities are all out here, hopping up and down in rage and hate. Same old, same old. Yawn. Modern American amateur extra radio at its finest...

I agree partly......

1. Operator skill

2. Receiver

3. Antenna

4. Power

Note; 2 and 3 can be interchanged.

But the radiosportsmen take over big parts of the popular HF ham bands
when a contest is on. Which is more than a few weekends a year. There's
no real equivalent to that in the other contests.

And unlike the other contests, getting more radiosport contestants
helps, not hurts, the winners.

> Life isn't set up to give plaques to "average joes". Winners
> are above average.
> Second place is "First Loser".

"Winner" has all sorts of definitions. Winning your section is
one level, winning your division another, etc. Just setting
a personal best score is winning.

Most radiosport contests have several levels of competition.
That's a good thing. My "Iron" class proposal doesn't reduce
or eliminate anyone's win.

73 de Jim, N2EY

In the for what its worth department;

I, W4NTI have been contesting seriously since about 1973 when I participated
in a major operation from DL5AY. (Army MARS station in Frankfurt). It was
the CQWWDX Phone and we had a blast. We had Americans, Germans, wives,
sons, daughters, company and Battalion commanders there. And great German
sausage and Beer. A fun time was had by all. We also made over 2.5 million

points. What a blast....

That is some of what contesting is to me. Soon I intend to go play with some super stations of the South East Contest Club. These are by invite only.

How does one get a invite? Be a contester, show improved scores and be a good team player. Thats also part of contesting.

For me, my individual station is probably below par for the "average serious contester". I have two radios....a MP and a TS-530s. I have two linears, a old SB-200 and a AL-811H (with 572s in it). Both get about 700 out on a good day.

I have no beams. Just loops, verticals, and dipoles. All on a 200 x 200 piece of property.

With this I manage decent scores and have put many certificates on my wall. Of course no first place wins in CQWWDX. But I have placed first in my section in ARRLDX and various sweepstakes contests, etc.

Why do I contest? To improve my score by improving my station and myself.

Its as simple as that.

Have a good day

PS; I worked a bunch of sporadic skip yesterday on six meters in the June VHF contest.....with 8 watts and a 3 ele yagi at 20'.

It's all a matter of perspective.

Dan/W4NTI

Winning is beating the Yankee Clippers. Try operating at that "level"
for the ultimate contesting experience.

> 73 de Jim, N2EY

w3rv

You got that right. Keep an eye on W4AN. The new call for the SECC (South
East Contest Club). NQ4I is another super station to watch for. Also SECC.

What's your obsession of posting this multiple times?
>
>
>

In any event, looking at that web site of NOV and NAL and
other penalty points, you have to work at it to find hams
in trouble. Seems what they say is true about hams respecting
the rules better than most other services.

Some of the NOVs are for stupid stuff like tower registration
numbers not posted (go to a hardware store, buy some house
numbers, then attach them to the tower, done) and such
that some corporation bean counter tried to skimp on.

Then there are also a lot of illegal CB transceiver violations,
and pirate broadcast stations. Why even bother doing a
pirate radio station when you can stream your programming
on the web? You go from covering a mile or so to the
whole world. And save on NAL fines.

Hello, Nick

Jackson is not of this planet as near as I can tell :))

Best regards from Rochester, NY
Jim

I and the OM also worked some of the VHF contest and noticed a very strange thing. Only 10% of the contacts that we made were Technician operators. On the other hand, 80% of them were Extra class operators. So where are all the Techs who are "trapped" in VHF and above because they "can't" pass the code (as some would have us believe)?

Dee D. Flint, N8UZE

You obviously didn't either. During your three week lying spree, not
once did you say "In my opinion..." Hi!

> You STATED that "...the role of the ARES is overblown..", yet the
> very day you did it there were no less than three new items on various

Is that what I said? You're welcome to quote it at any time.

> I've asked you over and over to provide some substantiation of
> those comments, but you simply dodge the questions.

You're the original Dodgeful Arter.

What seven hostile actions? Where is your documentation for your
claims of "A" NCOIC of Okinawa MARS?

bb:

Pray tell, you mean the "newer christians" can't read--so remain
ignorant to the passages which speak of wine and caution of consuming
too much? But, do encourage one to partake in a moderate fashion?

Or, have they torn those pages out of the bible, much in the same way
gays have torn out the pages calling homosexuality an abomination?

Yanno, we used to have mental heath facilities where there were able to
help these people...

Warmest regards,
John

I think he identifies with the hero in "The Who" song, Pinball Wizard.
Despite the movie "Tommy" the song never got popular with Steve until
the other guy, Sir John, re-recorded it.

> too busy "advancing the state of
> the art" to be bothered with learning the code and contesting.

Oddly enough, much of the advancement in ham rigs has
come about because of contesting.

For example, one of the first uses of computers in ham
radio was their use in logkeeping. I think one of the
university stations gets credit for that, using the
U's mainframe to dupe and print out their SS logs
circa 1968.

The improvements in receiver sections to have better
dynamic range, phase noise, and filtering is, IMHO,
largely driven by the contest/DX folks. And primarily
the big guns, who would plunk down big bucks for a
top-of-the-line rig if it gave them an advantage.

Then, of course, the technology that first appeared in
the top-of-the-line rigs worked its way into less expensive
ones. So we all benefit.

(makes me wonder if Hans has his IC-7800 yet...)

Olympians of radiosport, that's all.

I've run marathons and done contesting. Did pretty well in both,
but not like those guys - or the ones who run 26.22 miles at
under 5 minutes per mile.

Depends on what's competitive, the op, the station or both. A competitive op doesn't have spend a dime on a station. Which is where some of the hotshot multi-op guys come from. One of ours lives in Manhatten for instance, zero chance for having a home station no matter how much money he might be willing to spend.

> It's an important factor, though. Always has been. Part of the
> game in most contests.

I agree with that. One can take a $200 station or even a $1,000 station into the contests and have some fun with it but it won't be a competitive station by a long shot *if* the frame of reference is a decent score in the DX contests. A decent score in SS at the section level with a budget station is another story altogether.

No, it's not functionally equivalent. If you use cluster spots, then you are using information the some OTHER RADIOMAN at a DIFFERENT STATION provided. If you have your own robo-hound searching FROM YOUR STATION then you acquired the information of the air without assistance from outside sources.

For what application? A dipole at 30-40 feet is a primo antenna for SS,
probably better than either you mentioned. ("Pick the fight you can win.")

> What's the replacement value of the tower and everything on it?
> Not hamfest value - replacement value.

"Replacement value" is what I'd have to spend to replace it. Usually that's
equal to "hamfest value".

> And then there's the price of the real estate to put it all on.

Everybody needs to live somewhere. The prices of my homes are not a factor
which contributes or detracts from my contest scores.

> Take SS - the ham in a rare section has a built-in advantage
> over the ham in a nonrare one.

I hear real estate is very reasonably priced in VY0-land.

> Who enforces the present rules? Power level, packet spotting, etc.?

Good question. The answer is it is a gentleman's agreement, and you trust the person to abide by the rules. So you make the rules as rock-bottom simple as possible. Rules like no receiving while transmitting, are simply not enforceable. Ideas such as monoband antennas are going to knock a lot of people right out of the contest - unless of course they decide to cheat, as is the one receiver idea.

Finally, the idea of separating the contesters by limited and unlimited classes is incredibly counterproductive. So these small number of superoperaters are just going to work among themselves and then sign off, I suppose.

Whenever I hear rules change suggestions, I ask how this is going to affect the person suggesting the changes. Funny how it is always to give this person a big advantage, even when they claim they are just trying to level the playing field.

This is just a punitive plan toward the big stations.

One time I listened to one of the high-powered, high scoring stations noting how *they* should get extra points for listening to all those low power stations with the weak signals!

> But it takes more than the average station to win.

Define average? I've got an IC-745 and used a ladder line fed dipole
(96 feet long @50 feet high) to work the NEQP from Pennsylvania. Used a
MFJ-949E tuner on it.

Total outlay was around 350 dollars, and this has got to be a below
average station setup if there ever was one, especially by these
"contest standards".

But I put in a big booming signal to New England, and was definitely
limited by my own skills, (still working on 'em) and not my below
average station setup. Got a certificate one year.

>>>I know too many hams with "100W and dipole" stations who think
>>>contesting with such a setup isn't practical.

Sometimes. Depends on the class and their skills.

People have a tendency to operate with the stations that they have,
save for portable operations. Sounds like a "Well Duh!" statement, but
it is what most of us have to offer.

>>>And compared to
>>>the results of superstations, they're right. But if they could

Mike:

I think "they" attempt to convince us that we are the minority--however, I think only a small percentage of the population has somehow gained political and authority (police, etc.) control--how this has been done is nothing short of amazing...

And, while I think those who would attack or injure these people are as sick, or even sicker than the ones doing this...

A simple remark in public, such as, "I think gays suffer a form of mental illness which a kind society would seek to offer help with.", will provoke quite a large number of people into wishing they could kill you!!!

I stand in awe at the forces able to produce this phenomenon...

Warmest regards,
John

Truely I could argue that any aid in your station is "assistance" --- but not OUTSIDE assistance. Dupe sheets and electric pencil sharpeners are "assistance" at some stations!

If you can harness technology to gain some advantage in the radiosport game, so long as that technology is in YOUR station and under YOUR control, then more power to you. Only if that assistance originates at ANOTHER station as the result of efforts of other radiomen (ie., cluster spots), then your log should no longer qualify as an SO entry.

That's my story and I'm sticking to it!

>quickly...

Actually, not too much "reduction." When I first logged into
this din of inequity, the morsemen were already in full cry,
arrogant in their supposition that the code test would never go
away. El Jefe of them all (some nearly 8 years ago) was KH2D
and not hesitant to damn all "no-coders" in no uncertain terms.
N...@aol.com joined in after I did and attempted those same
long, long postings wherein he was wont to yank out (almost)
individual words and argue their use (exaggeration, but you get
the picture). N...@aol.com (who shall remain nameless) still
does that schtick.

Several others of the very-pro-code-advocacy came and went,
including a few ex-navy types who bragged over their wonderous
ability with morse (and who got trained at government expense).

Perhaps the worst blow of all to these stalwart Defenders of the
Archaic was FCC 99-412, the Report & Order that did the actual
regulation "restructuring" (for 1999, there have been other years)
as a sort of "Holiday Present" for all. ONE code test rate at
5 WPM, any class license having below 30 MHz privileges.

From about then on, one by one, the personal attacks and "gutter
fighting" became worse. The PCTA (Pro-Code Test Advocates) just
couldn't contain themselves. They popped their tops and vented.
More anony-mousies joined in, worse than the old PCTA, and the
personal attacks got worse and worse. The condition today may be
at a zenith, the Believers (of the code faith) trying to hold
back tomorrow.

A side problem are those few who think tangentially to the grope.
Those who think that THEY are the center of the newsgrop world.
Everything - in their apparent perception - revolves around THEM
and they cannot take anything that isn't gratuitous praise of
their heroic opinions. [we all know who they are...:-)]

Absolutely fascinating to those interested in psychology aspects
of human beans...along with sociopathic and aberrant behavior.
Entertaining in one way. :-)

Long Beach Convention Center and the MTT Microwave Symposium calls.
Bye. :-)

Which pages of the Bible do we follow, John?

Consider the first chapters of Genesis, where two different creation stories are told. Both of them cannot be literally true.

Or read the story of Lot and his family's escape from Sodm and Gomorrah. Not just the pillar of salt thing but his actions towards his daughters and their actions towards him.

Abominations? Plenty of them in the Bible - like eating pork, or any scavengers (that means lobster too), or even rabbits.

Who decides which abominations "modern Christians" have to avoid?

Weird, eh? The OT has more contradictory stuff in it than just about anything I've ever read.

I believe that the New Testament would be a good starting place. A lot less of the thou shalts and shalt nots.

Except for the Sermon on the Mount, which is a number of direct commands, most of which are routinely ignored by those who consider themselves the most righteous!

> once did you say "In my opinion..."

What lying spree?

No lies were stated.

YOU are welcome to post my comments, along with YOUR
substantiation of your claim of mistruth

> > You STATED that "...the role of the ARES is overblown..", yet the
> > very day you did it there were no less than three new items on various
> > sites about third-party agencies lauding ARES volunteers.
> >
> So?

"So" indeed.

It was one of your many unsubstantiated assertions.

Evidence that your statement was obviously flawed was provided.

> > You then also STATED that ARES will not be able to respond
> > because, allegedly, too many of the members are over extended on
> > commitments.
> >
> Is that what I said? You're welcome to quote it at any time.

Already did that.

You refuse to be the man you claim to be and fix it.

The refusal keeps you in the group "chronic unrepentant liar"

> > I've asked you over and over to provide some substantiation of
> > those comments, but you simply dodge the questions.
>
> You're the original Dodgeful Arter.

And you're a chronic liar.

> What seven hostile actions?

I didn't tell you?

> Where is your documentation for your claims of "A" NCOIC of Okinawa MARS?

You keep asking for "documentation of "A" NCOIC.

What's an "A" NCOIC...?!?!

You mean ANCOIC...?!?!

It's on Okinawa waiting for you to write a letter to the source I
ceted and verify it.

Failure to do so manifests you as a coward.

Denying that I provided you adequate information to verify my
claims continues to render you a chronic liar.

Do you lie like this to your wife? Your kids? Your extended
family?

Do you not know how to tell the truth, Brain?

from
> city code enforcement officials today.

He never got a visit to begin with. Tell us, eternal no code
training wheel ham, how can an Alpha Delta DX-CC antenna block a
public sidewalk when it's installed in an inverted vee
configuration and is 45 feet up in the air in the middle and the
length of the entire antenna is 82 feet long. One leg of it
would be 41 feet, dumbass. Hardly enough to "block" a sidewalk
further away than 41 feet.
We know you wouldn't know, since you can't put up anything but
that cheapassed "tiny tenna" in your filthy HUD section 8 ghetto
apartment.

> Best of all(Poor Lardass, he spent a year in the Iowa State
mental institution in Independance after trying to commit
suicide)

Best of all, you made yourself look like a jackass again.

2851. Navy Radiomen

by Bob 'Dex' Armstrong

In the old gravel-gut boat service, your only link with the civilized world was via the radio shack. A cubby hole on Requin aft of the scope wells in the control room... It was the home of the spark shufflers.

If you were in tight with a radioman, you could get ball scores. Sewer pipe sailors lost touch with the teams they followed... A hazard common to submarine sailors and people who take a moon walk and miss the ride home. Actually, we lost touch with just about everything. In the war movies when they come across some guy who claims to be an American, they ask him questions only an American could answer. If they had picked me up and asked me anything but (A) The names of Roy's and Gene's horses (B) Who won World War II and (C) Blaze Starr's bust size, I would have been one 'up the creek' sonuvabitch. Hell, we didn't know Jack Kennedy was the president until we snorkeled a day later.

Only a complete idiot would make a bet with a radioman. Chances were, the radioman had the final score before you tossed your wampum on the mess table.

I remember one great night brought to us by the spark pushers in the radio shack.

We had finished whatever nonsense they sent us out to do and were making turns for home. The Old Man opened the showers... Guys were bumming razor blades and rooting around in side lockers for something that would pass for a towel. Next thing you know, the foo-foo juice came out. Now there's a myth that all smoke boat sailors eventually bought into, sooner or later... Aqua Velva was never meant to disguise poor personal hygene. No matter how much of the stuff you poured on a dungaree shirt you had been inside of for two weeks, you were still one disgustingly foul smelling sonuvabitch. You could spray French perfume on an engineman with a fire hose and buzzards would still circle around the bastard when he went topside. But I digress...

A group of us were sitting around in the crew's mess drinking coffee and ragging guys heading fore and aft. A radioman came in and told us we were in for one helluva good laugh. He monkeyed around with the RBO and patched it into something in the radio shack.

For those of you who never had the pleasure of riding diesel boats or other seagoing steel-hulled garbage scows, I must explain something here.

You could make phone calls from a ship at sea. Here is how it worked. The radioman would raise someone ashore called a 'marine operator'. Then the radioman would give the marine operator the name and phone number of whoever the bluejacket aboard ship wanted to call. The marine operator would then place a collect call and when the party answered and accepted the charges, the marine operator would form a radio link with the ship and 'Bill the Bluejacket' could

talk to his sweetie.

From sweetie to the marine operator was private and confidential... From the marine operator to Barnicle Bill, it was up for grabs... Great evening entertainment.

"Poopsie, is that you?"

"Yes ducky doo, it's me."

"You miss me, peach blossom?"

"Oh yes... YES, darling!"

"Miss me a lot?"

"Oh, I miss you soooo much I can't wait to hold you and..."

"Okay darling... Are you going to meet the ship?"

"No sweetheart, I parked the car in the pier head lot... Keys are under the mat."

"Why aren't you meeting the boat, sweetheart?"

"Oh, it was supposed to be a suprise... If you must know, the kids are spending the night with the Webbers. I bought a new nightie and I figured we'd break it in tonight."

The animals would cheer,
"LET'S HEAR IT FOR MAMMA AND HER NEW NIGHTIE!!"

And so it went. Bluejackets phoning in after six months in the Med... Great entertainment.

"Darlin' can't wait... Just you and me and a can of Crisco!"

We heard it all... It was great... Laugh after laugh. A very memorable evening... Best and cheapest fun we ever had on Requin.

There were times... Moments that we took for granted and that passed with little notice. It's funny how they come back late in life when you have the time to reshuffle your memories... The collected moments that constitute your life.

Radiomen linked us with the world. Another thing we just took for granted and that was so damned important looking back. Never thanked them... Should have.

Great guys, all of them.

> this din of inequity...(SNIP)

...it wasn't a "din of inequity". It was a forum for the
discussion of Amateur Radio policy issues, and was used for that
purpose.

Google refers.

The "fighting" and other allegations by Lennie are direct
descendants of his voracious rants and blathering accusations.

> Several others of the very-pro-code-advocacy came and went,
> including a few ex-navy types who bragged over their wonderous
> ability with morse (and who got trained at government expense).

Skills you can't seem to really effectively diminish, your best
rants and snide comments not withstanding.

Oh yes...

We remember...

That's the R&O from which YOU stated you'd obtain an "Extra
Lite"...

It's been quite a few years...Still nothing.

> From about then on, one by one, the personal attacks and "gutter
> fighting" became worse....(SNIP)

What attacks? What "gutter fighting"...?!?!

YOU are the only one who continually brings up licensing and
practice from past years and then calls "us" "archaic".

"We" moved on. You're still several chapters behind, Lennie.

"We" try to discuss BPL, spectrum protection and other
issues...YOU continue to try an keep the arguments Lennicentric.

> A side problem are those few who think tangentially to the grope.
> Those who think that THEY are the center of the newsgrop world.

BBBWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH

The question was not about me, Brain.

The question was about YOU.

>>I<< asked >>YOU<< why >>YOU<< hadn't taken the time to add your
comments about Lennie's sick parody.

> > > > And you're a documented chronic liar. So who do you think will

> But it is you. It's as plain as the nose on your face.

My statements stand.

You've been challenged to make good on your accusations of lying.

Are you going to make good on it, or is this yet ANOTHER example
of how you dodge and snivvle your way out of a tight spot?

> > > > All of "us" have DIRECTLY addressed his vile and demeaning

>
> It is what it is.

What it "is" is an out-of-context quote meant to misrepresent what
was REALLY said. In other words, an act of deception on your part.

> > That's why I can say "Brian P Burke is a chronic liar" and know
> > that you can never take me to court over it.
> >
> > Because I have the evidence to prove my assertions.
>
> Hi! I would never take you to court for having a stupid opinion.

It's not an opinion, stupid or otherwise.

It's an assertion.

"Brian P Burke is a chronic liar".

> > > > > > > Do you admire all things about Jane?

Then your argument is that it is totally logical to claim to follow a
"religion" (such as the ARRL) but yet you are fully in your rights to
remove such pages as are un-suitable to you--but still should be viewed
as logical as you begin picking and choosing exactly what is pertinent
and what is not and following those things in the first mentioned
category only?

Hmmmm, interesting, just too bad we can't do that with the penal code...
or FCC rules and regulations for that matter... it would look more
"logical" to me then...

Warmest regards,
John

Michael:

It is weird, just to think it is the only book (well, there are a couple of more, most mention a "God") which stands between a lot more crime and immense degradation of society and not...

... as even I can see if there is no creator to answer to--then I am free to murder anyone possessing great wealth and property and take it for myself...

... of course I still wouldn't do that--but just because I want to "be a nice guy." And, having studied human nature, I am afraid how long that alone could stop me... perhaps till there was ten million dollars on the table and I thought I could get away with it? <evil-grin>

I think drug dealers, extortionists, bank robbers, serial killers, rapists, child molesters, etc. may have already figured this out though... too bad really... looking back, the world did seem a quite a bit safer when they were still living in "ignorance"...

Warmest regards,
John

Has nothing to do with me.

The claim was made about certain things being labeled abominations
by the Bible.

I point out that there are all sorts of things labeled abominations
by that same Bible, yet people who call themselves Christians
regularly do precisely those things (like eating pork and other
foods labeled unclean).

IOW, many Christians pick and choose which "Old Testament" abominations
to avoid, but then criticize others for not avoiding the same ones.

We also have Christians who claim the Bible to be literally true, and
insist that science agree with their literal interpretation. Yet they
don't seem to have read the very Book they want taken literally, for
it is full of contradictions *if taken literally*.

> Hmmmm, interesting, just too bad we can't do that with the penal code...
> or FCC rules and regulations for that matter... it would look more
> "logical" to me then...

Those rules are created by humans, and can be changed by humans.

--

Personally I prefer the Book of Bokonon.

Hello, Hans

You should have seen the RM1s on Guam when they wanted to find out results as to who made chief.

Grab the orderwire to Hono. Ask for a patch to San Diego. Ask for a patch to Washington ....

Had the results in 15 minutes LOL :))

Did you see the lady juror who said she thought jackson was, "just a
normal person"? Only in California would it be considered
'normal' for a 40+ year old man to share his bed with young boys.
jackson is almost as looney as wogie wussman.

Hey Dee,

Good question actually. Perhaps they are part of the vast majority of hams
that are inactive.

More likely they are all "stuck" on FM and have not a clue what else is
going on with V/Uhf. What a shame.

Dan/W4NTI

BWAHHHHHHHHH....we both know the "Tech" license stopped being technical in
nature way back in the early 60s.

And MOST VHF/UHF contesting is done in SSB mode.

Excellent Hans,

In the Army those in the know knew you had to know;

A. Supply Sgt.
B. Chief Cook.
C. Commo Sgt.

Not necessarily in that order.

"Pick the fights you can win", as a wise man once wrote.

73 de Jim, N2EY

Which is why Sweeps is such a major contest. Lots of small stations in all
sorts of locations. It is a blast.

In the last 7 years I have 5 clean sweep cups. Both for phone and CW.
Thats the challange for me.

There's more to a religion than that.

If you consider any organization that mentions traditions and
ethical/moral behaviors that people should conduct themselves
by, then you consider all of the following to be "religions":

- Boy Scouts, Girl Scouts and similar organizations
- US Army, Navy, Air Force, Marine Corps, Coast Guard
- AMA, ANA, and similar organizations
- IEEE and similar organizations
- No-Code International and similar organizations

And many others.
>
> If so, they have many of the traits of a religion...

So do all of the organizations listed above.

> and <many "ARRL
> zealots" look to be just as dangerous as some "religious

That claim is incorrect.

> has scarred off a bunch of licenses from joining...

IMHO, if someone is sacred off by the current license
requirements, they really aren't interested.

Dan/W4NTI

2884. Re: The Pool

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-13 23:50:16 UTC
From: N2EY@AOL.COM
Message-ID: <1118706616.060297.237070@g47g2000cwa.googlegroups.com>
Source record: 110116

Here's an update on the "when will FCC drop Element 1?" pool.

Note how almost everyone's date, including mine, has already
passed:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004 (first prediction)
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004 (first prediction)
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW: May 22, 2005
N8UZE: July 1, 2005
N3KIP: December 31, 2005 (second prediction)
K2UNK: July 1, 2006 (second prediction)
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction? If so, the "rolling rule"
(thanks Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can
add a new one.

At this point everyone before N3KIP can add a new prediction.

All predictions stay on the list.

Then the following are all cults, too:

- Boy Scouts, Girl Scouts and similar organizations
- US Army, Navy, Air Force, Marine Corps, Coast Guard
- AMA, ANA, and similar organizations
- IEEE and similar organizations
- No-Code International and similar organizations

And many others.

2889. Re: Haynie admits to problem, alzheimers victims respond with, "What problem?"

I think most of those groups progressive and open to change--this alone would make classification as a cult difficult...

However, the ARRL with un-moving devotion to its "principles" and the staunch "unwillingness" to change is what makes it more appropriate to such classification... rather bizarre really--when at its core is technology--and a technology which is RAPIDLY changing and adapting to new discoveries, methods, devices, etc...

"new" and "remarkable" become "old" and "common" in only a matter of months in this field...

Warmest regards,
John

All that verdict meant was that the jury found the complainant sleazier than the defendant. Happens every day when one puts one's fate in the hands of 12 people who have convinced the judge that they know neither party nor anything about the event nor about the law and that they haven't been paying attention to what is going on in the world around them.

In the original English "jury of one's peers" if one did not know the defendant one could not be a juror in that case.

"If you're innocent, request a bench (judge) trial. If you're guilty, request a jury trial" (Criminal Procedure 101)

Perhaps, John

But consider that some of us can send and receive cw faster than most folks
can type.

I know you may be good at "cut and paste", but that doesn't necessarily cut
it LOL.

Sure, voice appears faster, but when you get names and addresses that are
hard to pronounce ....

Not saying that CW is the best, but some folks better come up with something
superior to AM and FM. There are a number of modes, but most folks want to
"talk". That won't cut it for 85 watt moonbounce on 24 GHz.

:)

73 from Rochester, NY
Jim AA2QA
ps - when I talk send and receive cw faster than some folks type, I'm not
talking a nice, leisurely chat at 30 or 35 words per minute ...

By the very nature of "testing" we are "forced" to do something we
generally don't want to do.

When I took my General, I had no intent on doing any RTTY operation
yet had to know RTTY theory and practice.

Good news is that now you don't HAVE to "learn" anything...Just
memorize those quesitons and answers...Whish is what gives me a good
laugh with the more arrogant NCT types (read that Lennie...)

They are "OK" with open pools and memorized tests, but they hate
memorized sounds...what's up with that? Sheesh...the FCC even delete
the requirement to demonstrate SENDING the Code.

There's no more work to memorizing the Code than there is to
memorizing the written questions...Unless you have a VALID medical
decicit.

Ain't that the truth..?!?!

A "normal person" who has $500M in assets and looks likes the
Scarecrow on Wizard of Oz...Only this time they didn't get the fire out
after the Wicked Witch set him ablaze.

I loved his music...It's hard to accept that someone who was once
that talented could screw up their life on so grand a magnitutde.

> Only in California would it be considered
> 'normal' for a 40+ year old man to share his bed with young boys.

Wellllllllllllllllllll...He certainly ain't the first. And had he
been "Joe Schmoe Jackson", working at Wal-Mart, there would have been
no charges (since there was no incentive to sue) or he'd be on the road
to San Quentin right now.

> jackson is almost as looney as wogie wussman.

Almost?

Try selling the NRA on the idea that the Second Amendment should be
repealed.

Try selling NCI on the idea that *some* code testing is OK.

> However, the ARRL with un-moving devotion to its "principles" and the
> staunch "unwillingness" to change is what makes it more appropriate to
> such classification...

The ARRL is as "open to change" (if not more so) as any of the
organizations named.

Is devotion to principles a bad thing? Or are principles, traditions,
and
standards to be tossed aside merely because they're old?

> rather bizarre really--when at its core is
> technology--and a technology which is RAPIDLY changing and adapting to
> new discoveries, methods, devices, etc...

Such as?

The ARRL has been pushing for a revision of the rules to classify
signals by bandwidth rather than content, and to free up old
technical limitations. What other group has put forth such a
proposal?

While I don't agree with all the proposed revisions, the general
concept is a valid one. Why should an FSK signal of 900 Hz bandwidth be
permitted on a frequency because it's RTTY, but an FSK signal of
500 Hz bandwidth be prohibited from the same frequency because it's
digitized voice?

US amateur radio is and has long been wide open for new discoveries,
methods, devices, etc.. Particularly on VHF/UHF, where there's lots of
bandwidth. You cannot blame the license requirements for lack of
innovation, because the requirements for full VHF/UHF privileges have
included no code test and only a minimal written test for 14+ years.

The real "cult" or "religion" to watch for is the mindset that all
change is good, new is better than old, ending is better than
mending, and similar marketing buzzphrases.

That mindset is geared to three goals:

- selling more product, regardless of whether it's really better
- attracting investment capital
- destroying the existing structure without an adequate replacement

The boom-dot-bust mess of 2000 proves the game doesn't last forever.
>
> "new" and "remarkable" become "old" and "common" in only a matter of
> months in this field...
>
Which field?

Radio broadcasting in the USA uses AM (developed more than a century
ago)
and FM stereo multiplex (developed a half century ago). Satellite radio
may
cut into their market but it's a long way from replacing standard
broadcasting.

TV broadcasting is only now beginning the widespread change to HDTV,
after a half-century of NTSC.

In any technology, there is usually rapid progress when the technology
is
new, then as the technology matures, the changes become more
evolutionary
than revolutionary.

Suppose FCC just dumps Element 1 tomorrow. Will we see a techno-
revolution in ham radio? Not likely - it didn't happen after the Tech
lost its code test.

John Smith wrote:
> It was never about anyone stopping you from sending cw was it...

A few anticode folks have stated they want Morse Code *use* by hams to
end, not just the test. They are a small minority, but they do exist.

> It is about stopping you from forcing others to learn cw when they would
> never use it...

Who is "forced" to learn Morse Code?

It's a requirement if someone wants an FCC-issued amateur license with
HF privileges, that's all.

> Always when one is being forced to do something they do not wish to,
> they should question everything in sight... just as you began when you
> thought someone was going to force you to quit...

The argument you present boils down to this: If someone doesn't want to
use Morse Code in ham radio, they shouldn't be required to learn it
just
to pass a test (even a simple, basic test) to get a ham radio license.
Those who choose to use it can learn it on their own.

Is that about right?

The problem is that the same argument can be made against almost
everything
in the written tests. For example, if someone doesn't intend to use
certain
bands, why are they forced to learn the band edges of every band their
license allows? If someone doesn't intend to use more than a few watts
of
transmitted power, why must they learn all that RF exposure stuff?
Indeed,
if someone doesn't intend to homebrew, why are they *forced* to learn
all
that theory stuff?

Sure, the written tests look easy to someone with a background in
radio,
electronics, computers or other related fields. But to someone from an
unrelated field, they're not easy.

Suppose you met a retired gentleman who had been a radioman in the
military 50+ years ago. He'd always wanted to be a ham but never had
the time or resources. Now he finds that ham radio still exists, and

he wants in.

The gent can still do code well, and remembers the basics of theory
as it was 50+ years ago. He gets an HF receiver and listens to the
lovely Morse Code signals on the low ends of the HF bands.

But in order to join the folks on 7010 or 3520, he needs an Extra.
And the written test is full of stuff he's never seen before, and
that he will never use.

Why must he learn all that stuff he will never use just to pass the
tests?

Sure, the stuff is easy for *you*, but not for *him*.

Invalid analogy.

Drums for communication aren't in wide use.

Morse Code for communication is in wide use in ham radio. Doesn't
need to be brought back because it's right here.

> > necessarily cut
> > it LOL.
> >
> > Sure, voice appears faster, but when you get names and addresses that
> > are
> > hard to pronounce ....

Bingo.

For any message that needs to be written down, the speed limitation is
usually the writing speed of the receiving op. The fact that someone
can theoretically talks 150 wpm doesn't mean anything if the person
on the receiving end can only write legibly at 15 wpm.

Text modes are great if you have the hardware for them and if you
are in a situation where you can look at a screen to read them.

Yup.

Good Morse ops can chat at speeds approaching those of voice ops
because
they use abbreviations and eliminate redundancies.

It's called "civilization", John. Also "mutual benefit".

You don't need a Book to figure out that stealing is wrong, all you
need
is common sense. Theft does not create anything - only productive work
does.

A farmer does not need robbing bandits in order to live. But the
bandits
need the farmer - otherwise there's nothing for them to steal.

A society composed solely of farmers and other producers can exist. A
society composed solely of thieves cannot exist, because there would
be nothing to steal, and they'd all starve.

> I think drug dealers, extortionists, bank robbers, serial killers,
> rapists, child molesters, etc. may have already figured this out
> though...

Nothing new about those kinds of folks - they have existed throughout
history. The smart ones figure out how to do their thing without what
they are doing becoming too apparent.

> too bad really... looking back, the world did seem a quite a
> bit safer when they were still living in "ignorance"...

When was that?

When people who didn't believe a certain way about a certain Book
were tortured and killed for their beliefs?

When wars were fought over interpretations of stories in a Book?

When "believers" argued that it was morally acceptable for some
people to literally own other people as property?

When more than half the population was rendered legally inferior
because of gender?

(lots more examples...)

IMHO, more wars, destruction, death and mayhem have been created by
organized religious/ideological zealotry than any atheistic thief or
tyrant could imagine.

There's a limit to what a bank robber will do to rob a bank, because
if the bank robber is killed or caught, his actions are obviously
pointless because he doesn't get the reward (money).

But there's no limit to what some religious zealots will do, because
even if they are killed or caught, they think they will get the
post-death reward, and there's no way to know if that's true or not.

> > anything I've ever read.

Only if you take it to be *literally* true.

Take Genesis, for example. The two creation stories contradict
each other. I think that's intentional - it tells us *not* to
take the stories literally. They're about ideas, rather than

history.

The idea that the descendants of Adam and Eve should be punished
for a crime they didn't commit doesn't make any sense if you
view it as a legal thing, like locking up someone today because
her Great Great Granddad robbed a bank. But if you look at it
from the standpoint that something people do today (like pollution)
will impact many future generations, it's a clear warning to think
beyond the moment.

Yet the business about homosexuality being an abomination is straight
out
of the OT.

> > Except for the Sermon on the Mount, which is a number of direct
> > commands, most of which are routinely ignored by those who consider
> > themselves the most righteous!

What commands? The Sermon doesn't say "Thou shalt" or "Thou shalt not",
does it? Rather He explains how things work - the rewards for those
who follow His example.

There is ONLY the Sermon on the Antenna Mount.

The Reverend has extolled that. Code is holy, code is righteous,
thou shalt have a code test for all privileges below 30 MHz.

Yea, verily, thou shalt beep lest ye lose the holy spirit of
ham.

>> Yanno, we used to have mental heath facilities where there were able to

> What was once insane is now required.

The first amateur license test did not require code testing.
Then the insanity began. It is only partly cured today.

Consider yourself a partly-cured ham.

Looks like a typo, since the "s" key is adjacent to the "e" key.
Maybe it isn't quite visible on your cum-encrusted keyboard,
baby raper.

> Ever since Schwartz got your DL info

Since D/L license is not available online to the public, how can
that be, dumbass?
Looks like Lardass is lying to you again.

> and people found out that you are
> 5'4" tall, you've been trying to change the subject.

Not. Since I'm taller than 5'4" you must have me confused with
your gay lover, Lloyd Davies.

> Tell us: Is your head flat and a good place to set down a beer?

Your bald headed before 21 butt buddy Lardass has the flat head.
His malformed skull looks like an Evinrude outboard motor boat
cover.

> You know what the Lavender Lads have to say about that.

No, you seem to be more knowledgeable about them. But then you
are a queer.
That is the reason Lardass Davies is a 31 year old virgin, after
all.

Poor two-test wogie, can't get the idea of sleeping with young boys off his crack shattered mind. Those that continue to accuse others of something in a feeble attempt to take the attention away from themselves are usually the ones doing it themselves. Heard from the WV Child Protection Agency lately wogie?

I guess all of the following are just wogie's typos.

" Stgop" Roger's version of Stop.
|
| "Fahter's" He meant Father's Day.
|
| "fserting"..would that be festering?
|
| "poists". Roger meant "posts".
|
| "snadwich" As in peanut butter and jelly?
|
| "regualr" Glen Dale rendition of "regular".
|
| "aftrer" After? Aftrer what?
|
| "soory". Sorry Roger mods up again.
|
| "didnb't" He didn't?
|
| "whoile". He ate the whoile thing?
|

| "Woamn" He's hooked on West Virginia phonics, all right.
|
| "prrof" And he kin prove it, too.
|
| "beforfe" Was that before he lurned to spell?
|
| "yoiuy" Roger's version of "y'all".
|
| "illerate" Only illiterate Roger can spell like this.
|
| "haeart" Aw, how heartless of me to laugh!
|
| "valule" Roger has no values. No wonder he can't spell it.
|
| "proch" Doesn't everyone have one on their house?
|
| "inmstitution" Where Roger's mom put him in June 1999.
|
| "timne" It's Howdy Doody time?
|
| "whgo" What? Who dat?
|
| "gnetically" Only Roger knows what this one means.
|
| "crfy" Like, cry, Roger, cry.
|
| "stutrtering" Some stutter, Wiseman stutrters.
|
| "Whjere" Where is Curtain Boy?
|
| "Webiste" That's Website to the rest of us.
|
| "Youire" Your? You're? Who knows.
|
| "fiored" As in fired?
|
| "Parety" Roger gave a party once. Nobody came.
|
| "Bouynce" Bounce?
|
| "Varification" Verifiable mental case.
|
| "Probelms" Poor Rogie.has many problems of the mental sort.
|
| "Partricipate" Oh, DUH!!!!
|
| "Cryed" Gee, Wogie..cry me a river.you dolt!
|
| "Stoick" What a dork. His old 386 has no spell check program.
|

| "Partiall" More WV Phonics, I see.
|
| "Obsucred" Either obscured or Rogie has "sucre" on his mind.
|
| "Infinate" Stupid. Think finite, Rogie.
|
| "Sustinance" As in Sustenance?
|
| "Juvinile". This is the way Roger likes his boys.
|
| "Piut" Put it where, Rogie?
|
| "Toyus". "Toyus R Us?
|
| "Diminuative". Roger's height.

Nobody likes to play with stinky fatboy wussman.

More of poor two-test wogie's 'typos'. Yea, sure.

"imput" - Mongolloyd's brain has no "input"! Mongolloyd one stupid fat faggot.
"Hundred's" - Mongolloyd couldn't count to one much less "hundreds"
"dopesnt" - Mongolloyd "doesn't" have a command of the English language!
"Wait till" - Mongolloyd we will "wait until" you compose a coherent sentence, but it will be a long wait.
"We wn't" - Lardass Davies, you should mod off with your stupidity so "we won't" see it ever again.
"Woger is now awoke" - Mongolloyd is never "awake."
"is too stupid to under awoke" - oh the irony, Mongolloyd!
"I mods my pants" - Mongoolloyd sure does and eats it, too!
"treasing" - Mongolloyd likes "teasing" mod mods with his syphilitic tongue.
"It's being TOS even" -Mongolloyd the only thing you TOS is your tiny mod!
"peoples" - Mongolloyd always steals other "people's" lines!
"I really wish Steve wasn't suck a mod and would come back to this board" - Mongolloyd makes good moded up sentence!
Mongolloyd made a Freudian slip when he used "suck" instead of "such".
"I think it is long since past time when you closed this modty board!" -Mongolloyd smoke bad weed!
"wraped" - Mongolloyd has frequently "wrapped" his syphilitic tongue around a mod's mod!
"hig" Who knows what the Athens mod means?????
"teir" - Mongolloyd is Belle Plaine's "Forrest Gump," As to his retarded peers, he's "their" Camp-We-Can-Do's star pupil.

Blind people have passed the code test.

> There is no wall that the paraplegic cannot walk through.

Paraplegic people have passed the code test.

> There is no wall that bars the physical being from doing
> anything they dream of...

> ...in their DREAMS.

All purposeful action starts with an idea - a dream, as it were.
First the idea, then the actions to make the idea become
a reality.

The person who will not allow him/herself to believe they can do
something is already defeated.

The current Morse Code test in the USA requires the correct
recognition of 25 consecutive Morse Code symbols, or correct
answers to 7 out of 10 fill-in-the-blank questions based on
5 minutes of Morse Code text. The entire text used for the
test consists of no more than 125 Morse Code symbols
transmitted in no less than 5 minutes.

This test has been compared to learning to recognize 41 words
of a foreign language, which is a fair analogy.

It seems incredible that such a simple test of such a basic
radio communication skill would be the cause of so much
controversy and acrimony from those opposed to it.

2927. K1MAN The crap has hit the fan.

This $21,000 fine is for the apparent transmission of willful and repeated interference;
willful and repeated communications in which he had a pecuniary interest;
willful and repeated failure to file requested information pursuant to an Enforcement Bureau directive; willful broadcasting; and willful failure to exercise control of his station.

Licensee of Amateur Radio
Station K1MAN

NOTICE OF APPARENT LIABILITY FOR FORFEITURE

Released: June 7, 2005

By the District Director, Boston Office, Northeastern Region,
Enforcement Bureau:

I. INTRODUCTION

1. In this Notice of Apparent Liability for Forfeiture (``NAL''), pursuant to Section 503(b) of the Communications Act of 1934, as amended (the ``Act''), we find Glenn A. Baxter, licensee of Amateur Radio Station K1MAN, apparently liable for a monetary forfeiture in the amount of twenty-one thousand dollars ($21,000). We conclude that Mr. Baxter apparently willfully and repeatedly interfered with ongoing communications of other stations in violation of Section 97.101(d) of the Commission's Rules (the ``Rules'')2. We further conclude that Mr. Baxter apparently willfully and repeatedly transmitted communications in which he had a pecuniary interest in violation of Section 97.113(a)(3) of the Rules. We find that Mr. Baxter apparently willfully and repeatedly failed to file requested information pursuant to an Enforcement Bureau (``Bureau'') directive. We further find that Mr. Baxter apparently willfully engaged in broadcasting in violation of 97.113(b) of the Rules3 and

apparently willfully failed to exercise control of his station in violation of Section 97.105(a) of the Rules.4

II. BACKGROUND

2. Mr. Baxter has a license to operate an amateur radio station, call sign K1MAN. Mr. Baxter also is executive director of the American Amateur Radio Association (``AARA''), which has a website at www.K1MAN.com. Mr. Baxter uses his amateur station to advertise his website, which offers items for sale, including an annual newsletter published by ``Glenn Baxter, K1MAN'' for forty-five (45) dollars per year. The website also provides a schedule of K1MAN radio transmissions.

3. In response to numerous complaints of deliberate interference caused by transmissions from Mr. Baxter's Amateur station K1MAN to ongoing radio communications of other stations, including stations participating in the Salvation Army Team Emergency Radio Net, the Bureau issued a Warning Notice to Mr. Baxter on September 15, 2004. The Bureau requested information from Mr. Baxter with regard to the method of station control and what action, if any, was being taken in response to the complaints of interference.5 The Warning Notice also reminded Mr. Baxter that the Bureau previously warned him in a letter dated April 14, 2004 that enforcement action would be taken if he failed to correct the deliberate interference being caused by his station.6 The April 14, 2004 letter also cautioned Mr. Baxter that if he continued to use the station for pecuniary interest by advertising his website he could be subject to further enforcement action.

4. By letter dated October 14, 2004, Mr. Baxter responded to the September 15, 2004 Warning Notice stating ``[n]o corrective actions are necessary at K1MAN'' and ``[n]o changes are needed with regard to station control which is in full compliance with all FCC rules.'' Mr. Baxter's letter further stated that ``K1MAN is in full compliance with all FCC rules, state laws, and federal laws. I encourage you to take `enforcement actions' and look forward to seeing you in court (s).''7 Mr. Baxter's response did not provide the required information requested regarding station control.

5. The Bureau issued a second Warning Notice to Mr. Baxter on October 29, 2004.8 The Warning Notice explained that Mr. Baxter's response to the September 15, 2004, Warning Notice was insufficient and explained Mr. Baxter's obligations as a licensee to furnish the information requested by the Bureau. The Bureau provided Mr. Baxter an additional twenty days to provide the specific information requested. The Warning

Notice also indicated that the Bureau had received two additional complaints of deliberate interference caused by Mr. Baxter's station. The Bureau requested information from Mr. Baxter regarding the identity of the control operator and method of station control for station K1MAN on the dates and times specified in the recently-received interference complaints.

6. Mr. Baxter responded by letter dated November 2, 2004, stating that ``[m]y letter to you dated 14 October 2004 in response to your letter to me dated 15 September 2004 provided all the information required by FCC rules and by federal law.''9 Mr. Baxter did not provide any information regarding the identity of the control operator or the method of station control.

7. On November 25, 2004, Commission personnel monitored Mr. Baxter's Amateur station on 14.275 MHz between 9:21 a.m. and 2:12 p.m. EST. During that time, Mr. Baxter's station transmitted numerous on-the-air references to his web page at www.K1MAN.com. On November 27, 2004, Mr. Baxter's Amateur station K1MAN began transmitting on top of ongoing communications at 5:54 p.m. EST on 3.890 MHz, disrupting the communications by the other licensees.

8. On November 30, 2004, agents from the FCC's Boston Office conducted an inspection of Mr. Baxter's Amateur station K1MAN. The method of station control appeared to be a telephone line connected to an interface board, which was connected to the transmitter. Mr. Baxter claimed that he monitored the station from a mobile receiver when not at the transmitter and that he could control the transmitter through a land-line or cellular phone. During the inspection, Mr. Baxter demonstrated that he could control the transmitter.

9. On December 1, 2004, on the frequencies 3.975 MHz and 14.275 MHz, Mr. Baxter's station K1MAN transmitted a pre-recorded program lasting nearly seventy minutes, which consisted of an interview by Mr. Baxter with Mr. Jeff Owens. During the broadcast, Mr. Baxter explained that Baxter Associates was a firm that engaged in ``management consulting, executive search and executive career management.'' The program consisted of a lengthy broadcast of the telephone interview with Mr. Owens. Mr. Baxter explained the fees involved, how Mr. Owens could invest in franchises of Baxter Associates, and how Mr. Baxter planned to market the franchises of Baxter Associates. Nothing in the program related to Amateur radio and no station call sign was given until the conclusion of the seventy-minute program.

10. On December 8, 2004, FCC agents found that Baxter's station K1MAN commenced transmitting at 7:10 p.m. EST on top of existing radio communications on 3.890 MHz. On December 19, 2004, from 5:44 p.m. to 6:30 p.m. EST, on frequency 3.975 MHz, Mr. Baxter's Amateur station K1MAN broadcast transmissions of an apparently defective pre-recorded audio tape, which resulted in the repeated transmission of a nine-word phrase, and segments thereof, without any intervention of a control operator and without the identification of the station's call sign. Mr. Baxter's Amateur station went off the air abruptly at 6:30 p.m. EST in mid-sentence.

11. On March 30, 2005, monitoring personnel observed station K1MAN advertising the www.K1MAN.com web site at approximately 7:19, 7:28, 7:33 and 8:05 P.M. EST on 3.890 MHz. On March 31, 2005, at 7:28 P.M. EST, monitoring personnel observed transmissions from station K1MAN begin on top of existing communications on 3.890 MHz.

III. DISCUSSION

12. Section 503(b) of the Act provides that any person who willfully or repeatedly fails to comply substantially with the terms and conditions of any license, or willfully or repeatedly fails to comply with any of the provisions of the Act or of any rule, regulation or order issued by the Commission there under, shall be liable for a forfeiture penalty. The term "willful" as used in Section 503(b) of the Act has been interpreted to mean simply that the acts or omissions are committed knowingly.10 The term ``repeated'' means the commission or omission of such act more than once or for more than one day.11

13. Section 97.101(d) of the Rules states that ``[n]o amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.''12 On November 27, 2004, December 8, 2004, and March 31, 2005, Baxter's Amateur station K1MAN commenced transmitting on top of existing communications on 3.890 MHz in apparent willful and repeated violation of 97.101(d) of the Commission's rules.

14. Section 97.113(a)(3) of the Rules prohibits an Amateur station from transmitting any communications in which the station licensee or control operator has a pecuniary interest. On November 25, 2004 and March 30, 2005, Mr. Baxter's station repeatedly transmitted references to his website, which offers various products for sale, including a monthly newsletter published by Glenn Baxter and offered for sale for forty-five dollars per year. In addition, on December 1, 2004, Station K1MAN transmitted a seventy-minute interview with a person who was considering whether to retain Baxter Associates, an employment-search firm owned by

Mr. Baxter. During the transmission, Mr. Baxter discussed fees, investments, and franchising opportunities. We find that Mr. Baxter apparently willfully and repeatedly violated Section 97.113(a)(3) of the Rules on each of these occasions by transmitting communications regarding matters in which he has a pecuniary interest.

15. Section 308(b) of the Act provides that the Commission ``during the term of any (such) licenses, may require from ...a licensee further written statements of fact to enable it to determine whether such original application should be granted or denied or such license revoked . . . .''13 Although Mr. Baxter replied in part to the Bureau's demand for information in the Warning Notices dated September 15, 2004 and October 29, 2004, Mr. Baxter failed to provide information regarding how the station is controlled and the identity of the control operator. Mr. Baxter's statements that ``[n]o corrective actions are necessary'' and ``[n]o changes are needed with regard to station control'' are insufficient. We therefore conclude that Glenn A. Baxter apparently willfully and repeatedly failed to comply with a Bureau directive to file information regarding control of Station K1MAN.

16. Section 97.113(b) of the Rules prohibits, with limited exceptions not applicable here, an Amateur station from engaging in any form of broadcasting or transmitting one-way transmissions. Section 97.3(a)(10) of the Rules defines broadcasting as ``transmissions intended for reception by the general public.'' 14 We find that the pre-recorded seventy-minute interview with a person interested in retaining Baxter Associates, during which there was no station identification, constitutes a ``broadcast'' and an impermissible one-way transmission. Therefore, Mr. Baxter apparently willfully violated Section 97.113(b) of the Rules.

17. Section 97.105(a) of the Rules provides that the control operator must ensure the proper operation of the station.15 On December 19, 2004, station K1MAN repeated the same pre-recorded phrase, and segments thereof, for 45 minutes on 3.975 MHz after which the transmissions ended abruptly in mid-sentence without the station identification required by Section 97.119(a) of the Rules.16 The continuous transmissions of the same pre-recorded phrase and segments thereof, and the abrupt ending of those transmissions in mid-sentence without identification, suggests that Mr. Baxter did not exercise control of his station. We conclude that Mr. Baxter apparently willfully violated Section 97.105(a) of the Rules.

18. Pursuant to The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines ("Forfeiture Policy Statement"), and Section 1.80 of the Rules, the base forfeiture amount is $7,000 for willful or malicious interference, $3,000 for failure to file required information, and $3,000 for violation of transmitter control. 17 There are no base forfeiture amounts for violations of the rules prohibiting broadcasting or pecuniary interest in Part 97 of the Commission's rules. We conclude, however, that violations of the Part 97 rules prohibiting broadcasting and the transmission of any communication in which the operator has a pecuniary interest are similar to violations of the Commission's requirements pertaining to broadcasting of lotteries and contests, which carry a base forfeiture amount of $4,000 for each such violation.18 In assessing the monetary forfeiture amount, we must also take into account the statutory factors set forth in Section 503(b)(2)(D) of the Act, which include the nature, circumstances, extent, and gravity of the violations, and with respect to the violator, the degree of culpability, and history of prior offenses, ability to pay, and other such matters as justice may require.19 Applying the Forfeiture Policy Statement, Section 1.80, and the statutory factors, a $21,000 forfeiture is warranted.

IV. ORDERING CLAUSES

19. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Communications Act of 1934, as amended,20 and Section 1.80 of the Commission's Rules,21 Glenn A. Baxter, is hereby NOTIFIED of this APPARENT LIABILITY FOR FORFEITURE in the amount of twenty-one thousand dollars ($21,000) for willfully and repeatedly failing to furnish information requested by the Bureau, willful and repeated violation of Section 97.101(d) of the Rules, willful violation of Section 97.105(a) of the Rules, willful and repeated violation of Section 97.113(a)(3) of the Rules, and willful violation of Section 97.113(b) of the Rules.

20. IT IS FURTHER ORDERED that, pursuant to Section 1.80 of the Commission's Rules, within thirty (30) days of the release of this NOTICE OF APPARENT LIABILITY, Mr. Baxter SHALL PAY the full amount of the proposed forfeiture or SHALL FILE a written statement seeking reduction or cancellation of the proposed forfeiture.

21. Payment of the forfeiture must be made by check or similar instrument, payable to the order of the Federal Communications Commission. The payment must include the NAL/Acct. No. and FRN No. referenced above. Payment by check or money order may be mailed to Federal

Communications Commission, P.O. Box 358340, Pittsburgh, PA 15251-8340. Payment by overnight mail may be sent to Mellon Bank /LB 358340, 500 Ross Street, Room 1540670, Pittsburgh, PA 15251. Payment by wire transfer may be made to ABA Number 043000261, receiving bank Mellon Bank, and account number 911-6106.

22. The response, if any, must be mailed to Federal Communications Commission, Enforcement Bureau, Northeast Region, Boston Office, 1 Batterymarch Park, Quincy, MA 02169-7448 within thirty (30) days from the release date of this Notice of Apparent Liability for Forfeiture and must include the NAL/Acct. No. referenced in the caption.

23. The Commission will not consider reducing or canceling a forfeiture in response to a claim of inability to pay unless the petitioner submits: (1) federal tax returns for the most recent three-year period; (2) financial statements prepared according to generally accepted accounting practices ("GAAP"); or (3) some other reliable and objective documentation that accurately reflects the petitioner's current financial status. Any claim of inability to pay must specifically identify the basis for the claim by reference to the financial documentation submitted.

24. Requests for payment of the full amount of this Notice of Apparent Liability for Forfeiture under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.22

25. IT IS FURTHER ORDERED that a copy of this NAL shall be sent by Certified Mail, Return Receipt Requested, and regular mail, to Glenn A. Baxter, at his address of record.

5Letter from W. Riley Hollingsworth, Special Counsel, Enforcement Bureau, September 15, 2004.
6The April 14, 2004 letter was a follow-up to letters dated

January 29, 2002 and March 4, 2003. In the January 29, 2002 letter, the Bureau detailed numerous complaints that were received alleging rule violations by Mr. Baxter's station. The letter advised Mr. Baxter about the Commission's rules regarding interference, station control, broadcasting, and pecuniary interest. The March 4, 2003 letter advised Mr. Baxter that the Bureau continued to receive complaints about his station's operation, indicating that he had not corrected the problems outlined in the January 29, 2002 letter.

7Letter from Glenn A. Baxter, October 14, 2004.

8Letter from W. Riley Hollingsworth, Special Counsel, Enforcement Bureau, October 29, 2004.

9Letter from Glenn A. Baxter, November 2, 2004.

10Section 312(f)(1) of the Act, 47 U.S.C. § 312(f)(1), which applies to violations for which forfeitures are assessed under Section 503(b) of the Act, provides that "[t]he term 'willful', when used with reference to the commission or omission of any act, means the conscious and deliberate commission or omission of such act, irrespective of any intent to violate any provision of this Act or any rule or regulation of the Commission authorized by this Act...." See Southern California Broadcasting Co., 6 FCC Rcd 4387 (1991).

11Section 312(f)(2) of the Act, 47 U.S.C. § 312(f)(2), which also applies to violations for which forfeitures are assessed under Section 503(b) of the Act, provides that "[t]he term 'repeated', when used with reference to the commission or omission of any act, means the commission or omission of such act more than once or, if such commission or omission is continuous, for more than one day."

12Section 97.101(b) provides that each station licensee must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. The rule further provides that no frequency will be assigned for the exclusive use of any station. See 47 C.F.R. § 97.101(b). Because amateur radio station licensees share frequencies, the prohibition against willful or malicious interference is essential to the viability of amateur radio.

1347 U.S.C. § 308(b).

1447 C.F.R. §97.3(a)(10).

1547 C.F.R. § 97.105. Section 97.7 of the Rules requires each Amateur station to have a control operator when transmitting. 47 C.F.R. § 97.7. Pursuant to Sections 97.103(a) and 97.103(b), the station licensee is responsible for the proper operation of the station in accordance with the FCC rules, and the FCC will presume that the station licensee is also the control operator, unless documentation to the contrary is in the station records. Mr. Baxter is the licensee of Station K1MAN and there is no evidence in the Commission's records that Mr. Baxter has designated another control operator.

What about women with real educations?

Would you consider someone with a BSEE from the University of
Pennsylvania and an MSEE from Drexel University to have
"a real education"?
>
> ... the cw part

Is an amateur test. And is a trivial problem to people with
real educations..

> makes as much sense as learning to play a "jew's
> harp"--a lot of sense if you wish to, none if you don't...

Then why require someone with no interest in VHF-UHF to learn
those techniques in order to operate on HF? Why require
knowedge of FSK, PSK and other data modes to operate voice?
Why require knowledge of transistors and ICs to operate
vacuum-tube equipment?

IOW, why require anyone to learn anything about a subject they
are not interested in, just to get a license to do the things
they *are* interested in?

--

Perhaps what bothers some people the most about the code test
is that it isn't something most people already know. And it
isn't something that can be learned by reading a book, watching
a video, etc. It's a skill, not "book learning".

In learning the code, a Ph.D in EE has to start at the same place
as a grade-schooler. And the grade schooler may learn faster and
do better! Perhaps it is this characteristic of the test - its
ability to act as a Great Equalizer - that causes some to resent
it so much.

Apply that same argument to ssb...and AM...and FSK...and VHF/UHF.

Apply it to the VE rules, band edges, and almost any other regulations.

If your argument is valid for the use of code, then it's valid for the
use of almost everything else in amateur radio.

> I certainly do not use cw...

So? I certainly do not use much of what I had to learn to get
my license. But I learned it just the same. Was that wrong?

> and no young
> guys I have helped into the hobby are going to be using it...

What if they do? What if they discover, on their own, how much
fun it is, despite your efforts otherwise?

> in the future cw will go silent... that is inevitable...

In the future all modes will go silent.

It seems to me, John, that you do not answer questions nor
engage in dialogue, but simply repeat the same basic
mantras. Some could call that "cult-like behaviour".

Is there a reason for your top-posting and non-answers?

Just curious

2930. "Typos", Wogie???

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-14 23:11:41 UTC
From: Lloyd 2 <anon@anon>
Message-ID: <d8no6b$6h7$0@pita.alt.net>
Source record: 110163
Cross-posted to: alt.cocksucker.roger-wiseman,alt.radio.scanner.flame_fest,rec.radio.amateur.policy

This is a small compilation of words that Not Wogie seemes to have difficulty with. These are actual errors made by AB8MQ. There was no need to exaggerate.

There are too many misspelled words for Wogie to blame them all on typographical errors.

>.....
.....

"imginary" Hey, Rog. Another typo?

"asck" Sack or ask?

"Ultimte" Hooked on Phonics?

"greade" First or Second?

"attentiopn" Hooked on phonics, are we?

"copuple" Damn. Lloyd moved my keys around again.

"licvense" What Riley makes you retest for.

"havfe" Half? Halve? Have? Who knows.

"Baout" Bout? About?

"unsubstantiateed" It gets better.

"pompousity" Oops! Darn that keyboard, anyway!

"suergery" That is Devry for ya.

"aditting" Darn those typos!

"abckpedals" His greasy hair got in his eyes again

"shreeched" Wasn't he the guy in a sit com? Screech?

"stuid" Pot calling the kettle black?

"heared" That's West Virginia for heard.

"assuslted" Rog just makes em' up as he goes along.

"experieince" Oh, DUH!

"abouve" Is this a French word?

"Cosast" Some place by a body of water?

"mebership", Just a typo, right?

"retqards" Regards or Retards? Who can tell?

"coordinbator" Huh?

"Realy" Really?

"Nitoiced" Keyboard error or stupidity?

Becasue

Licence

Convienince

Myabe

"occurance" Say what?

"srtuggling"

"definatrely"

"delapidated" What a dufus.

"picutre"

"permenatly" Ebonics again?

"Arest" You need a rest, Wogie.

"Sentenceing" No comment.

"Narcotices" What?

"Undre" Is this a city in Germany?

"Surgeoun" And this would be?

"Commuications" Who is laughing at who?

"Ovre" Ovre and out!

"Wondreful" It's a "wondreful" day in the neighborhood?

"Derivitave" Still no spell-checker, eh?

"You lose, shit for brians." Woger showing who real loser is.

"Deisowned" Deis what?

"Deeppest" Roger strikes again.

"Dodgeing". Is he talking about a car?

"Staedy" Steady?

"Linme" Transmission line?

"Getr" Nobody knows.

"Experieince" Wogie is good, ain't he?

"Appropiate" What kind of opiate?

"Laywer" Lay what?

"Visitpors" You never have any, ergo you don't know how to spell it.

"It's "complaintant," you sniveling weasel." (Roger Wiseman on spelling complainant.)

"Irreevant" Good going, Wogie.

"Forwared" Forward HO!

"Glady" Glad Bags?

"Neighborhod" It's a wonderful day in Wogie's neighborhood.

"Mena" Mean? What you mean, Wogie?

"Notr" Not?

"Sassifyed" ALA Rolling Stones.No Sassifaction..

"Fantasises" That is "fantasizes", Wussman.

"Illarate" West BY GOD Virginny!

"Reveresed" Must be one of those off-brand keyboards.

"Soem".as in Some? What a loser.

"VIRIN".What Wogie was before he met the Lavender Lads.

"Minisule".he mussa meant miniscule. Like his IQ.

"Champoin".Whassup, Wiseman? No dictionaries in the mental ward?

"Anoinymous"...a cross between anonymous and annoying?

"Acident" Roger's mom got preggers by accident.

"Alreaedy" Alright, already!

"Amouints" Roger amounts to nothing.

"Aposterphe" This guy is a hoot, ain't he?

"Basios"...word Woger uses when he gets neeeerrrrvous.
"Behing"...a cross between being and behind?

"Coiward" As in peeking from behind his mommy's curtains.
"Feamle"...I think he meant female.
"Losser"...only loser Roger can do it better.
"Ignroant"...typical, considering the source.
"Sluprs"...only Rogie knows what this means.

"Travelled"...a Rogerism, replete with ignorance.
"Postss"...pssst...Roger..that should be Posts.
"Defgenerate"...well, it's Roger's word...
"Faity"...he meant to say Fairy, but you know Roger.

"Ghet" Get a load of Curtain Boy!
"Distribiution"...Roger likes using phonics.
"Biotch"...he meant Bitch, but his phonics took over again.
"Methjadone"...a West Virginia substitute for Heroin.
"Sumbliminal"...one of Roger's favorites.
"Recepticle"...either of Roger's moist cavaties.
"Cociane"...a West Virginia drug of choice?
"Tiome"...Roger meant to say Time...but his fingers were numb.
"Beraking"...no definition. Could mean 'beraking' the leaves,
"Amny"...he meant 'any',
"Nlay"...a town in Maylaysia? Vermont?
"Al;ong"...only Wussman knows what this means.
"Becasu"...well, becasu Roger is not the brightest bulb on the tree.
"Seperation". Why? Because Roger cannot "seperate" from his mommie!
"Sisnce" He meant Since, but his pudgy little fingers slipped off the keys.
"gnetically" What?
"provce" (prove?)
"Piuzza" (West Virginia Pizza)
"Schol" (school?)
"strill" (still?)
"shoitgun" 12 ga or 20 ga?
"Snoip" (How they spell "snip" in Glen Dale)
"Maturbater". Wiseman does it all the time, he just can't spell it.(leaves a sticky residue on his right hand)
"Coskscuking". It's a Roger thing, as in Lavender Lads.
"Waddleing". Only in Glen Dale, eh?
"Spaeaking". Curtain Boy did this after his second retest.

" Stgop" Roger's version of Stop.

"Fahter's" He meant Father's Day.

"fserting"..would that be festering?

"poists". Roger meant "posts".

"snadwich" As in peanut butter and jelly?

"regualr" Glen Dale rendition of "regular".

"aftrer" After? Aftrer what?

"soory". Sorry Roger fucks up again.

"didnb't" He didn't?

"whoile". He ate the whoile thing?

"Woamn" He's hooked on West Virginia phonics, all right.

"prrof" And he kin prove it, too.

"beforfe" Was that before he lurned to spell?

"yoiuy" Roger's version of "y'all".

"illerate" Only illiterate Roger can spell like this.

"haeart" Aw, how heartless of me to laugh!

"valule" Roger has no values. No wonder he can't spell it.

"proch" Doesn't everyone have one on their house?

"inmstitution" Where Roger's mom put him in June 1999.

"timne" It's Howdy Doody time?

"whgo" What? Who dat?

"gnetically" Only Roger knows what this one means.

"crfy" Like, cry, Roger, cry.

"stutrtering" Some stutter, Wiseman stutrters.

"Whjere" Where is Curtain Boy?

"Webiste" That's Website to the rest of us.

"Youire" Your? You're? Who knows.

"fiored" As in fired?

"Parety" Roger gave a party once. Nobody came.

"Bouynce" Bounce?

"Varification" Verifiable mental case.

"Probelms" Poor Rogie.has many problems of the mental sort.

"Partricipate" Oh, DUH!!!!

"Cryed" Gee, Wogie..cry me a river.you dolt!

"Stoick" What a dork. His old 386 has no spell check program.

"Partiall" More WV Phonics, I see.

"Obsucred" Either obscured or Rogie has "sucre" on his mind.

"Infinate" Stupid. Think finite, Rogie.

"Sustinance" As in Sustenance?

"Juvinile". This is the way Roger likes his boys.

"Piut" Put it where, Rogie?

"Toyus". "Toyus R Us?

"Diminuative". Roger's height.

"Definitely" Definitely

"Percriptions" Say what?

"Credibiliy" More Glen Dale intellect.

"Thsoe" Yet another Glen Dale gaffe.

2931. Re: Of course Michael Jackson is innocent, what a stupid question:

N2EY:

I have asked the young men why they have no interest in getting a ham license, it is because of the limitations placed on the no code license--and the fact they are not interested in learning code to chat with someone DX--a task which can be accomplished much easier and reliably over the net with instant messaging, IRC chat, etc... that is REAL. THAT is dropping the numbers of hams and putting bands in danger of being lost... that is holding our numbers at such low levels the FCC begins to find us more a bother than anything else...

Now we are just debating if and how we are going to save amateur radio from the men who would require a code requirement onto the hobbies death...

You are right, I repeat the mantra like a prayer...

... all the women I have ever tried to interest in radio... all have declined doing anything towards getting a license... once they even see a key and a code practice oscillator they look at me as if I am crazy and ask, "You are kidding, right?"

Then they grab their net-to-phone and/or keyboard and being chatting with canadians, so americans, mexicans, asians, aussies, brits, etc...

... and at this point it is hard for me to pose a logical argument--women are just smarter than men... you can't fool them...

John

Tsk, tsk, tsk. THIS newsgroup is NOT about owning personal
firearms. This newsgroup seems devoted to Michael Jackson. :-)

>Try selling NCI on the idea that *some* code testing is OK.

No Code International was found for the express purpose of
ELIMINATING the morse code test. Why should they "change" and
do like you wish them to do?

>> However, the ARRL with un-moving devotion to its "principles" and the
>> staunch "unwillingness" to change is what makes it more appropriate to
>> such classification...
>
>The ARRL is as "open to change" (if not more so) as any of the
>organizations named.

Total and complete bullshit, N...@aol.com. The ARRL is about as
hidebound to the status quo as is possible for the olde-tyme
league leaders to be and still be human. That is abundantly
clear in their publications, periodicals, and whatnot output in
at least the last half century!

The league WILL support the law as it is written. It must. That
is PC. Beyond that, the league sits on their collective olde-tyme
duffs, trying to keep the status at the quo of the core membership.
the Believers.

>The ARRL has been pushing for a revision of the rules to classify
>signals by bandwidth rather than content, and to free up old
>technical limitations. What other group has put forth such a
>proposal?

What "other group" is there in the USA posing as "representative
of 'all' amateurs?" [ain't none]

What has the mighty league DONE in all its "pushing" since 1979?
It couldn't defeat Access BPL. It couldn't get a whole band at

60 m. It couldn't stop the IARU (and NCI) led REVISION of S25
at WRC-03. It couldn't stop the FCC restructuring ELIMONATION
of 13 and 20 WPM morse code test rates. It couldn't stop the
FCC in cutting the number of new amateur radio license classes
in HALF. CHANGE is happening but the league has become impotent
and represents only the olde-tyme, settled-in-their-ways core
membership. For a quarter of a century the ARRL had done
little but brag about how good they are, yet still hasn't
increased their membership percentage of all licensed U.S. radio
amateurs.

>US amateur radio is and has long been wide open for new discoveries,
>methods, devices, etc.. Particularly on VHF/UHF, where there's lots of
>bandwidth. You cannot blame the license requirements for lack of
>innovation, because the requirements for full VHF/UHF privileges have
>included no code test and only a minimal written test for 14+ years.

Then WHERE is N...@aol.com's "leading the way" examples in
amateur radio above 30 MHz? WHERE are his state-of-the-art
innovations...beyond his "admired by neighbors" vacuum tube
HF transmitter designed and built in the 1990s?

Remember that N...@aol.com is this double-degreed, ivy-covered
"radio engineer" of "much experience" in communications. [?]

>The real "cult" or "religion" to watch for is the mindset that all
>change is good, new is better than old, ending is better than
>mending, and similar marketing buzzphrases.

Poor Believer. All radio amateurs desiring below-30-MHz
privileges "MUST" test for morsemanship...because it is the
FIRST mode in radio and all MUST keep the tradition and other
assorted maxims. Coupled (tightly) with the mighty League as
a "potent representative" of "all hams," all that non-believers
have clear visibility to the CULT FOLLOWING of the MORSE SECT.

>Suppose FCC just dumps Element 1 tomorrow. Will we see a techno-
>revolution in ham radio? Not likely - it didn't happen after the Tech
>lost its code test.

WHERE is N...@aol.com demonstrating ANYTHING in this "techno-
revolution?" A vacuum tube HF transceiver "designed" and built
in the 1990s? :-)

Poor Believer. 2 out of 5 U.S. radio amateurs are Technician
Class licensees and they don't worship morsemanship! It must be
a virtual hell for the arrogant and elite morsemen who don't get
the respect and admiration they insist they deserve...tsk, tsk.

>John Smith wrote:
>> It was never about anyone stopping you from sending cw was it...

>Good Morse ops can chat at speeds approaching those of voice ops
>because they use abbreviations and eliminate redundancies.

Oh, my, THAT old brag.

Tsk, tsk, N...@aol.com, listen in on any large FAA-tower airport
and, especially, the voice communications out of an FAA Center.

No morse used there, but plenty of abbreviations with elimination
of redundancies. Word rates are above 150 WPM equivalent and
often approach 250 WPM equivalent. No "test" required to learn
the abbreviations in TRACON talk.

Tsk, if morse code was so "efficient" and "speedy," it would have
been prime use in the REST OF THE RADIO WORLD. It isn't. Other
than the ham hobbyists ("on the lower ends of the 'bands' <HF>")
and some long-established automatic ID keyers, the REST OF THE
RADIO WORLD has given up on morse code.

To attempt countering the above, you MUST trot out the hoary old
maxim that "this is amateur radio!" as if the hobby is somehow
exulted and revered BECAUSE of morse code testing...and you will
state that "because there are still morse users in amateur radio,"
"newcomers 'must' learn/test for that skill to talk to them." :-)

[such always seems to happen as a "reason" for being...:-)]

That "reply" (yet to come but as certain as there is a tomorrow)
might be augmented by some kind of "need" to "be able to talk to
those in foreign lands who do not speak English." One of the
truly specious and bereft of logic statements ever made in here!

Go ahead and "chat" on anything via morse code...use its unique
ability to express subtleties of opinion, the timbre and tone of
the sound, and all the other body language clues available
through morse. :-) Other than IDs, location, "the rig here is"
and WX, there isn't much more to the "chat," is there?

Please continue to praise the military morse ops, N...@aol.com,
especially those of the USN. The USN is NOT a branch of the
military you were in. Indeed, you weren't in ANY branch of the
military. You "served in other ways."

>a reality.

Sort of like showing one's REAL patriotism by volunteering for
milirary service?

The FCC is NOT a regulator of "dreams." All it does is mitigate
interference in the civil side of the EM spectrum by U.S.
citizens.

The FCC is NOT any "moral arbiter" of anything but its own
regulations and rulings in regards to U.S. law.

>The person who will not allow him/herself to believe they can do
>something is already defeated.

N...@aol.com tries to sound like a Reverend on morse code,
preaching from some ivy-covered pulpit. [pulpit fiction
but without a Travolta] Is this a prelude to (roll drums)

...A Sermon On The Antenna Mount?

Can N...@aol.com become an artist-illustrator, traveling from
place to place, painting portraits? Sam Morse did that. Sam
and his financial backer Al Vail invented morse code. ART
with minor success at it in any media REQUIRES a built-in
aptitutde for that (or an excellent PR/gallery person to sell
"great art").

I started out WORKING as an artist-illustrator because I did
have the built-in talent/aptitude for that. Not only that, my
completed works were BETTER in any media than Sam Morse's.

That reply has very little to do with "moral imperatives" or
the FCC or with N...@aol.com other than totally refute the
specious (and irrelevant) supposition that a government agency
is a moral/motivational arbiter of what some do as a HOBBY.

>---
>
>The current Morse Code test in the USA requires the correct
>recognition of 25 consecutive Morse Code symbols, or correct
>answers to 7 out of 10 fill-in-the-blank questions based on
>5 minutes of Morse Code text. The entire text used for the
>test consists of no more than 125 Morse Code symbols
>transmitted in no less than 5 minutes.

Duhhhhh...

>This test has been compared to learning to recognize 41 words
>of a foreign language, which is a fair analogy.

Ridiculous, specious "comparison."

Morse code is simply the arhythmic monotonic tone patterns to
represent the letters, numbers, and some punctuation in the
ENGLISH LANGUAGE. It was never intended to be anything else.

I already KNOW, have used, all without ANY license or "test,"
MORE than 41 words in each of three foreign languages. Your
"comparison" is preposterous.

>It seems incredible that such a simple test of such a basic
>radio communication skill would be the cause of so much
>controversy and acrimony from those opposed to it.

Oh, my, incredulosity puzzles N...@aol.com, possibly because of
his incredible stubborn attitude of maintaining the OLD STANDARDS
forever and ever...and his unmitigated gall and arrogance by
insisting that some long-ago morse test passing SHALL be passed
by newcomers. Forever.

The FCC uses "licensing" as a means of EM spectrum mitigation,
NOT to "control the moral/ethical behavior of hobbyist hams."

The FCC is NOT an academic institution whose "tests" are any
sort of equivalent to academic skill/knowledge "qualification."

That Test Element 1 remains IN the amateur radio regulations is
due primarily to the incredible acrimony of those olde-tyme
hammes who cannot bear to lose the one link to their personal
"fame" that set them "up above their fellows" (as hobbyists).

Now, N...@aol.com, study hard, devote yourself to the Morse art
of painting, but you won't be in anything but small-bore in
the caliber of Morse art. APTITUDE lack cannot be overcome by
DREAMS.

So I guess you should never have to answer questions on the test about RTTY, Packet, Amtor, SSTV, ect., ect., if you think you will never use those modes. Or you shouldn't have to answer questions on theory such as ohms law, if you never plan to build anything.
So how do you know that you will never want to operate those modes? Do you want to take another test if you someday decide to operate another mode? Should we have hams building and putting equipment on the air who don't even know ohms law?
The fact is, all that is available to any licensed ham by virtue of their license, so they should have some knowledge in these areas should they ever want to persue them.

No one is forceing you to do any of them, if fact, no one forced you to get a license.

>Did I miss something here, if you know morse it gives you the ability >to speak and read french?

Any "good" morseman KNOWS EVERYTHING! :-)

That's the ONLY skill they need...and some have said so. :-)

>Hell, I know morse and still can't speak to the french, unless they
>morse in english!!! Same with the Germans, Dutch, Spanish, etc....

Way back two centuries ago, Sam (Morse) and Al (Vail) revised
Morse's original code (all numbers) into something representing
ENGLISH letters, numbers, and some punctuation marks. That was
roughly in the 1840s. After radio was demonstrated in 1896
(in Italy and Russia) as a communications medium, the good
(and always CORRECT) morsemen claimed it was an "international
language." :-)

It would be nice if all you had to do was put in a switch with more positions on it, but those darn "innards" would have to be modified too. Old equipment would probably have only a few bands it would operate on, and the olde analog dials would add to the problems. The old stuff would probably just have to be written off as a loss. Newer equipment would be more amenable to modification, and displays would more likely continue to work. Of course, someone has to do the mods, or the new equipment gets consigned to the recycle bin too. Some of the newer equipment would possibly not be convertible

Okay, so lets say we just ditched all the analog equipment, and most all of the digital equipment up to date of change.

Now lets talk about antennas. It isn't likely that we will have single antennas at any station, save for the resurrection of the old general purpose dipole fed with ladder line, run through a tuner. That's one that olde tyme hammes will recognize! I suppose the Steppir antennas could work if you have enough coin. The method proposed by Jim will not accommodate the tricks we use now to provide an acceptable match as the major HF bands will not be harmonically related.

All in all, no thanks.

Sounds like the same "reasoning" as when my late mother was in the
nursing home and would complain that the aides were talking about
her. When I asked her what they were saying about her, she replied
"I don't know - I don't speak <minority foreign language>".

It's not about me.

It's about why you make insinuations about "double standards" and
then enact one of your own on an issue that one would pesume to be of
some personal interest to you...in as much as you espouse concern over
Veteran's issues.

We've not heard a clear and definitive statement from you to
Lennie on his vile parody of the Tomb of the Unknowns.

No cajones to take a stand? Or do you "admire" Lennie for this
too...???

So what are you in HERE complaining for, Brian...?!?!

It's those unlicensed commissioners that Lennie's always
interjecting into his rants who are in control of that...

And what do YOU care...In your master's opinion, anyone who's
already been tested on something and for which a regulation change
would not affect should not have any say in the matter...

Are you again disagreeing with your admired master but unwilling
to just stand up and say it?

Trap dipoles don't have to be on bands that are harmonically related.

Had you read my previous comments, you wouldn't be making such absurd
statements. Or maybe you would anyway.

Still no CLEAR, definitive statement by you.

Lot's of "...well, didn't you tell him?.."

And YOU ahve the temerity to call ME "dodge".

Thanks for the proof of your cowardice, Brain...Nothing I didn't
expect.

Not if the passband you want to operate on falls within the other
desired band. In most cases you still need a tuner for bands other
than the ones the antenna is cut for.

> > All in all, no thanks.

With all due respect, perhaps your skill at getting them
interested needs some improvement....

Given your attitude towards Morse Code, you'd be as
effective as the chairman of the National Beef Council
trying to get people to be vegetarians..
>
> Then they grab their net-to-phone and/or keyboard and being
> chatting
> with canadians, so americans, mexicans, asians, aussies, brits, > etc...

Which takes no radio and no license. So it's not about Morse Code,
but about different interests.
>

It's just another one of those guys who thinks that Ham Radio is only relevant in as much as it resembles the Internet. - In other words, the guy has no clue about the hobby but wants to run it down because it is not the Internet.

I use this attitude as a handy intelligence test for amateurs... If they cannot differentiate between Amateur Radio and the Internet, or if they cannot see why there should and would be differences between the two - then I know that they are brain-damaged (or even worse) - associated with TAPR or the ARRL's HSMM group.

In any case the attitude indicates a clueless state in relation to the amateur radio hobby.

BWHAHAHAHAHA!!!

> There are too many misspelled words for Lloydie to blame them all on
> typographical errors.

"breaddead" - LLoyd hasn't got anything upstairs in the oven
"defenseive" - Lardass is "defensive" of his ignorance
"counter-offenseive" - When LARDASS LLoyds attack
"nights" - Athens ASSHOLE was referring to last "night's" masturbation
session
"I forget to set the playlist in Winamp to repeat!" - Mongolloyd also
"forgets" the use of past tense, maybe he forgot!
"Techincal" - Lloyd just hates those "technical" things
"Dalkes" - Lloyd's granddad remembers when movies became "talkies" too
bad LARDASS learned to Dalk <sic>
"That it!" - When Mongolloyds get real mad, they talk like Tor Johnson
"Woger" - LARDASS closely identifies with Elmer Fudd with his lack of
hair and all
"decide on weather or not" - It's always "stormy weather" with Lloyd
deciding "whether" or not to use correct English
"can not" - Mongolloyd is wondering how he "cannot" seem to get ahead
in life
"is'nt" - "Isn't" LARDASS cute when he is mad?
"PAINFULL" - How LARDASS' bathroom scale feels when he steps on it in
the morning, real "painful"
"I wish for Roger Wisemand" - Lloyd liked thosed thingd ford Rogerd
"alot" - Davies dreams he can communicate in English a lot
"thier" - Lavender Lloyd sure does lisp after a night behind the
dumpster
"dont" - Lloyd says "dont", the rest of the world says "don't"
"Isreal" - Is FATASS Lloyd's retardation for real, or can he blame
Israel?
"juist jelous" "extermenate" - A three for one post Athens Asshole
axiom
"footting" - What LARDASS doesn't have, an equal "footing" anywhere
"Cant" - Emmanuel?
"th" - When Lloyd gets nervous, he stutte, er stutters
"enfighting" - Lloyd's two brain cells are infighting for control of
his stupidity

"YOU STUPID JEW!" - Wasn't Jesus Jewish, so called Christian LLoyd?
"Tonite" - There's nothing in Lloyd's brain "tonight" or any night
"segmant" - What Lloyd's communications are, only sentence "segments"
"I just listening" - Too bad he doesn't listen to his poor English
"buffon" - The Athens, Alabama "buffoon" strikes again!
"museium" - Where LARDASS LLoyd keeps his "muse"
"nastey" - How everybody describes LARDASS' body stench, especially in the ghetto
"loose" - Lloyd's description of his spinchter muscles...
"wont" - Lloyd refuses to learn English, it's Lloyd's "wont"
"awhile" - It will be "a while" before Davies gets a clue
"freinds" - Lloyd's conglomeration of "friends" and "fiends"
"thier" - "There" just isn't any hope for LARDASS Lloyd "ill-educated" Davies
"backstabers" - Lloyd's version of the OJays' hit
"becuase" - Home of the "Deliverance Extras" spelling by LARDASS Lloyd
"obselete" - What LARDASS thinking is to him, others see it as 'obsolete'.....
"belive" - What fools like LARDASS Lloyd "believes"
"thier" - Ill-educated Xtian LARDASS Lloyd shows off his language skills!
"marshalls" - Mongolloyd spell "marshals" real good!
Wisemand - LARDASSd fucksd upd againd
"compay" - Mongolloyd never gets any female "compay," while others do get "company"
" But when we are winning," DUMBFUCK, YOU have NEVER WON anything in your miserable life!
"and do the nasty!" You don't really know what that means, do you, 30 year old VIRGIN?
"It's does" - Mongolloyd use good English
"momnet" - LARDASS Lloyd Davies misses his dead "momnet" for a "moment"
"seriuosly" - Lavender Lad President Mongolloyd wants to be taken "seriously" instead of "seriuosly"
"annouced" - Mongolloyd "announces" his stupidity again
"tonite" - Davies never lets his lack of education stop him from announcing to the world he's a fucking imbecile!
"nite" - When LARDASS Lloyd molests those kids he makes them say "nite, nite" at "night"
"weldare" - Calling Dr. Weldare, LARDASS needs his head out of his FATASS....put it on his welfare bill
"so fuck of" - When Mongolloyds who have man tits talk tough......
"fukcing funney" - Alabama deliverance extra Davies speak
"pictrue" - "Picture" yourself as a Davies Mongolloyd
"isseus" - Davies has "issues" too many to list here
"resortjng" - Is Lloyd from Finland?
"attsxks" - When LARDASS Davies "attacks" he uses illiteracy
"basturds"- What mental illness patient LARDASS Lloyd calls his nurses
"shkt" - Mongolloyd Davies' "Skittles", he likes that "Hershey rainbow"
"law suit" - LARDASS never leaves his HUD apartment with out his law suit

"opinionn" - When LARDASSn postsn whiln drunkn
"intrenet harrasssmint" - Tries to make LARDASS Lloyd's rotting teeth feel fresh
"sneeky" - The teachers always "sneaked" Lloyd through the next grade
"that' wasnet" - LLoyd was out that year of school that they went over English grammar
idiout! - "Lloyid" <sic> strikes out again!
"speling" - Mongolloyd Davies the "spelling" bee champ of the retards!
"reas isseus instaed" - Davies talking out of that cheap beer again
"atttacking" - LARDASS Lloyd stutters when he gets upset.....ttttt.....
"challegne" - When Mongolloyds drink and post
"metnal" - Mongolloyd just doesn't have the "mental" ability to debate......
"debste" - What Lloyd's mommy did to him in the bathtub
"cahllenge" - Mongolloyd speak for "call" and "challenge"
"basturds" - LLoyd ,Amanda's illegitimate "bastard" sure does have a scat fetish
"morsd" - Whend Daviesd drinkd andd postd
"wont" - It is Mongolloyd's "wont" to be stupid, "won't " you let him?
"youd" - Oops, LARDASS did it again!
"poinion" - Must be an Athens Alabama "Deliverance" thing
"Woger Wiseman"- LARDASS Lloyd's got that cocksucker's lisp
"isnt" - "Isn't" LARDASS cute when he slobbers?
"worfh" - Davies' cocksucking lisp has returned
"waset of spaceda" - When Lloyd's only friend Colt 45 malt liquor kicks in
"Oppulant" - The only thing "opulent" in LARDASS is that he is rich in ignorance
"obly" - LARDASS lisp from cocksucking shows when he tries to say his favorite fag artist "Moby"
"wood" - LARDASS LLOYD'S head "would" be made of "wood"
"dserve" - LARDASS lives in that ghetto where they say he sure does "dserve" those pizzas
"frum" - LARDASS LLOYD DAVIES wonders where his real father is "from"
"DISCUST" - Mongolloyd Davies' command of the English language is "disgusting"
"You worthless coward are scared of debating me." - Mongolloyd make good sentence
"jellous" - Most of LARDASS Lloyd's cellulite body is "jealous" of skinny, in shape people
"It just didn't wok out" - When LARDASS tried to stir fry those nutsacks for pizza topping, Pappa John's terminated him saying he didn't "work out".
"entact" - LARDASS' single brain cell isn't "intact" either.
"empahis" - Notice how LARDASS Lloyd's "emphasis" is always on his fucking stupidity.
"Fuck all fo you" - Christian LARDASS Lloyd showing that Jesus spirit.....
"bllod" - How LARDASS Lloyd spells "blood"
"did'nt" - LARDASS "didn't" do very well in school

"PLEASE by a clue" - LARDASS Lloyd's parents couldn't even "buy" him an education
"extrodinare!" - LARDASS is a moron "Extraordinaire"
"unsubsribe" - Mongolloyd Davies "subscribes" to the theory that ignorance is bliss...he must be in heaven
"Must've struck a cord" - LARDASS confuses his favorite sex fetish of tying his penis with a light cord and masturbating to the word "chord".
"dumass" - Dumbass Davies trips and falls in shit again.
"Them two bigtime losers!" - Mongolloyd mentally ill Davies makes good sentence!
"straming" - Lardass usually has to wash his sheets from the "stream" of piss when he wets the bed or not given his filthy HUD apartment
"surpassinf" - LARDASS is always "surpassing" his previous levels of stupidity.
"pleanty" - <guffaw!> "Plenty" of stupidity coming from LARDASS Lloyd.
"Cause i'll have law lock you up and throw away the key!" - Mongolloyd talk tough!
"pome" - When LARDASS WADSWORTHLESS Stubbyfellow writes a "poem"
"Once she here's my show" - Most people hears a show, LARDASS "here's" them!
"forgotton" - LARDASS has "forgotten" what he was taught in special Ed
"I want your seriousness" - LARDASS does his take on "I want your sex"
"I did'nt ask for your fucking grammer checking!" - LARDASS Lloyd revels in his ignorance!
"agrument" - When the voices in LARDASS Lloyd's mentally ill head collide they have an "argument"
"craetive" - Mongolloyd Davies isn't very "creative" with his stupidity, however.
"You could have posted it, for we know!" - LARDASS make good sentence!
"bottem" - Mongolloyd likes those little boys' "bottoms" from hanging with Steve Holsten
"James Wickstrom talked about tonite that out threre, thier Sherriff's department" - Mongolloyd
shows off those Pulitzer prize writing skills.
"bring yer cents" - Mongolloyd show how he flunked out of school because he had no "sense"
"You peeks out" - LARDASS Lloyd and stupidity a symbiotic relationship.
"Be thier" - LARDASS Lloyd make good sentence!
"If you pussys have balls you confront me!!! Deep down you are scared of me. You our jellous
because I am the great almighty Time Lord!!!!
The Time Lord always wins in the end." - Does it really need to be said about Mongolloyd Davies?
"yerself", "hisself" - LARDASS picked up his language skills or lack thereof from the
niggers his mommy Amanda serviced.
"I lost TEN POUNDS on my diet simce first of the year!" - Too bad LARDASS didn't gain any language skills
"The best Amatuer Radio talk show ever!" - Chosen 5 to 1 over literacy by other ill-educated morons and Mongolloyd

"All of my Daleks have been dispached!" - Too bad some extra brain
neurons haven't, Mongolloyd.
"satillite" - When LARDASS met the space between his ears
"Tuseday" - LARDASS' usual day to wear his pink tutu
"I am 210 punds now!" - LARDASS lies and fucks up again!
"jelous" - LARDASS Lloyd is "jealous" of those who can spell, read, and
write.
"peoples" - LARDASS Lloyd the "people's" choice of the Biggest
L-O-S-E-R!
"curtians" - LARDASS LLOYD DAVIES uses those "curtains" in his filthy
apartment as a masturbation rag
"depsised" - Mongolloyd Davies, who the entire real ham community has
"despised" for his lack of ability
to pass a simple 5 wpm code test or General theory
"sicker" - When Lloyd Davies has a mouth full of cum he can't say
"sticker"
"liceneses" - Mongolloyd Davies has one of those exclusive "licenses"
on stupidity
"isseus" - LARDASS has "issues" with people of intelligence.
"conquor" - Mentally ill LARDASS Lloyd has yet to "conquer" his obesity
and mental illness
"crakheads" - Retard Davies make good sentence!
"servent" - Roger Wiseman's willing "servant" makes another gaffe.
"lesibens" - When Benjamins take the wild side...the "lesbians" don't
care, though!
"Los Angles" - Mongolloyd has the wrong "angle" about "Los Angeles"
"busses" - Do they take the motored "buses" or do they take the
"thier" - You say "their," Lardass says "thier".... to-may-to,
to-mah-to.....
"eductional" - LARDASS Lloyd's writing is "educational" on how severe
illiteracy is in his family.
"She sounded like she really whappy to here from me." - Mongolloyd get
rejected again!
"This is morning I weigh at 207 pounds. This should prove to you, that
I can succeed if I put my
mind to it. I know some your stupid critics can't see that, but I'm not
here to please you." -
- LARDASS makes the "huh?" factor rise.
"This looks much more like sexy Lloyd" - Porky Pig lookalike stubby
tubby Davies dreams
he looks like a skinny, tall Billy Zane
"I figured you the thought of me owning..." - Lardass dreams the
impossible dream of thought
"I took you a long hour and a several minutes..." - Too bad LARDASS
Lloyd didn't take and pass English
"I get a laugh over you!" - Mongolloyd make good sentence!
"did'nt" - "Didn't" Lardass ever pass any school subject?
"Proves to show" - Lavender Lloyd proves he is an imbecile
"It' paid off" - Alcoholic LARDASS Lloyd's bar and utility bills never
are though.

"I wear if with" - Davies wears his stupidity well
"You need to get al ife and a job." Mongolloyd retardo Davies needs to get English lessons and
not dream of an "Al ife" with "Al Queda"
"I've never fucking pretending attorneys!" - LARDASSclown Davies never had to pretend to be stupid, either!
"...what your life must me like..." - Mongolloyd's life of pizza delivery and trashcan robots is really something
to want, too, isn't it?
"manor" - Lardassclown Davies' "manners" are like those of a hog....
"Christien" - Poor LARDASS Davies, he's shows why ignorance is bliss in the eyes of the Lord.
"reely" - Mongolloyd Davies is "really" stupid, isn't he?
"please don't imposter me more" - Mongolloyd make good sentence!
"distastful" - A description of LARDASSCLOWN DAVIES' eating habits.
"commnet" - Most people make "comments," ill-educated Lloyd Davies makes "commnets".
"None of you refuse to tell me who you are." - Huh, Mongolloyd?
"Millinium" - Even after a "millennium" LARDASS couldn't be smart!
"afriad" - LARDASSclown Davies isn't too smart, I'm "afraid"
"powerfull" - Mongolloyd Davies sure has a "powerful" command of the English language.
"conquor" - Lardass Lloyd has yet to "conquer" his idiocy.
"I always new that your stupidity would trip you up, Mr. Wiseman."
- I just "knew" Llardass Lloyd couldn't pose as "Christy
Davies" without fucking it up and outing himself.
"I have given it some though and decided to come back" - Mongolloyd has never given anything any "thought." (from another "I'm leaving" speech/lie)
"usaul" - As "usual" Lardass lloyd Davies fucks up!
"Secwet Woger " Llardass Llavender Llad Lloyd's been sucking so many cocks he's got a lisp!
"douters" - Even though he has his "doubters", it's
"doubtful" Llardass Lloyd has an I.Q. over 70.
"bypolar" - Mongolloyd Davies is a "bipolar bisexual".
"desperite" - Lardass Lloyd is so "desperate" to win at something, anything.
"situtation" - Most people get in "situations, " but not our total fuck-up Lloyd.
"aholt" - Lardass Lloyd usually gets "a hold" of himself on a Saturday night, since he has no date!
"mysteriuos" - Mongolloyd Davies, "mysterious" survivor of a coat hanger abortion attempt.
"I've did" - Most people say " I did"
"Woger" - When cocksucking, lisping fags try to say " Roger."
"for sometime" - Lardass has been a mentally ill retard "for some time" now.
"mommie's" - When Mongolloyds say "Mommy's" as in "Mommy's house."
"drop out" - Lloyd was a High school and college " dropout."
"backpedalling" - "Backpedaling" is what Lardass does a lot of.

"Maybe two years back" - Mongolloyd speak.
"outted" - Lardass Lloyd's illteracy at work.
"I've riddled Woger for years as Arf! Arf!" - Mongolloyd is Arf!Arf!, and his stupidity is no riddle.
"self esteme" - One thng is for sure, Lardass has it..."low self esteem," that is.
"short comings" - Lardass has many, many "shortcomings."
"yahoo" - Lardass always goes into the "Yahoo!" gay chat rooms.
"The truth hurts you see" - So does reading your mangling of the English language, Lardass.
"His stupidity can not be disguised for long." - Lardass' stupidity "cannot" be disquised at all.
"entireity" - Lardass is the embodiment of stupidity in its' "entirety."
"bothe" - Lardass is "both" stupid and retarded.
"got hime" - Lardass has got "him" a case of the dumbass!
"evelope" - Mongolloyd pushes the stupidity "envelope" to the max.
"chiicken" - Lardass Lloyd should eat more "chicken" instead of leftover pizzas then he wouldn't be obese.
"dont" - "Don't" ever improve your English skills, Lardass!
"likign" - Huh? More Mongolloyd Ebonics.
"you ignorant spawn of satin" - Lardass ironically confesses his love of wearing lace!
"powerfull" - Mongolloyd's brain cell isn't "powerful" enough to light a christmas light.
"heresay" - Mongolloyd is a fucking idot, and that's no "hearsay."
"glas" - Lardass Lloyd never uses a "glass" to drink his sticky protein.
"freind" - Dicksucking Davies hasn't got a "friend" in the world.
"yu" - Lardass, "you" really should've gotten a better education!
"Got Brother Stair tuned in here to listen to while sleeping tonite!" - Mongolloyd fucks up again!
"I am not a retrard" - Oh, yes, you are, Lardass!
"Got you in another lie!" - We've "caught you" in another fuckup, Dumbass Davies!
"I am not mentally challenged! I have some pontential." - Mongolloyd is in denial about his imbecility and has the "potential" to become an even bigger jackass!
"did'nt" - Mongolloyd "didn't ever pass Spelling.
"soon all your asses are belong to sherrif" - Mongolloyd fantazises about having sex with his local "sheriff"...
"shure" - We are "sure" you are a fucking moron, Llardass Lloyd!!
"proxie servers" "conecting" - Mongolloyd used "proxy servers" when he "connected" to spam Josh's board.
"enfrocement" - Mongolloyd also fucked up when he spoofed caller ID's and spammed boards, and now law "enforcement" is watching him.
"apoligize" - Mongolloyd's parents should "apologize" for ever siring such a mentally ill retard.
"meagre" - Mongolloyd's "meager" brain can't comprehend English.
"goten" - If only Mongolloyd would've "gotten" an education!

"Prepositioned" - Mongolloyd always gets "propositioned" by nouns and pronouns!
"temting" - Mongolloyd is as "tempting" as a root canal.
"accept" - Mongolloyd use the wrong word in the wrong place again!
"normaly" - "Normally" Lardass would be passed out from Two bud lites by now
"red head" - Little Red is shoving his big ole black dickhead in Lardass' fat piehole.
"Aflack" - Mongolloyd fucks up yet again..www.aflac.com
"Dickionary" - Mongolloyd is almost as bad as his queer lover Holsten in obsessing about dicks.
"Pnig" - Mongolloyd can "ping" an anvil off of his thick malformed skull
"pratice" - Lardass has lots of "practice" fucking up.
"dont" - Dicksucking Davies is too stupid to use an apostrophe, isn't he?
Mongolloyd thinks "Lent" and "lint" are pronounced the same.
"ancinet" - Mongolloyd will be past "ancient" before he gets any pussy.
"harrasment" - Lardass just loves when his fat asshole gets "harassment" from the drunk black winos!
"persecute" - Mongolloyd "Christy Davies" Attorney-at-Law makes quite the lapsis calami in his "prosecution".
"fulest" - Little Lloydie is "fullest" when he's done sucking down wino nutsack goo!
"i'll" "wether" - Mongolloyd, "I'll" just bet you can't decide "whether" or not to clean your shitty underpants or keep wearing them.
"authroities" - Mongolloyd's familiar with the "authorities" since his brother has been carted away to jail more times than he can count.
"Perhaps I can Hal on my show too!" - Perhaps you should consider remedial English, FATASS!
"cannonized" - Mongolloyd thinks somebody will have to be shot out of a cannon to be "canonized"
"This board is alot better than all them N54 Boards!" - Mongolloyd is sure overwhelmed, "then", by "all those" words!
"I dont reconnise you opinions" - Mongolloyd "doesn't recognize" his stupidity, either.
" I donlt care" - Obviously, Lardass, obviously.
"Thats" "benifit" - "That's" one of Lardass' many fuckups. He doesn't have the "benefit" of having a dictionary.
"I already notice Woger seeing my everywhere" - Drunken fat bastard Lardass never notices when he fucks up.
"Look, crackhead, I am NOT degenerates!" - Mongolloyd isn't very literate, either.
"URASE" - Mongolloyd's empty skull never had to be "ERASED" it never contained anything to begin with.
"I reading the board tonite" - Mongolloyd can only read comic books.
"REMIDER" - Lardass never has to leave a "reminder" of his many fuck ups.
"jsut" - Mongolloyd is "just" a mentally ill retard.
"Im" - "I'm" sure Lardass isn't getting any pussy.

"theere" - Mongolloyd isn't all "there".
"Activatiuons" - Lardass Mongolloyd always has his stupidity
"activations" ready to show themselves.
"steganographic" - Mongolloyd takes his "stenographic" duties as a
pizza order taker seriously.
Woger" - Mongolloyd shows off his cocksucking lisp!
"dogy" - Mongolloyd likes it "doggy" style. Receiving, it, that is.
"Tonigjht" - Mongolloyd will be on here "tonight" because he can never
get a woman.
"1987 rqadio shack reciever" - Mongolloyd the cheapass makes good
spell!
"neber" - Mongolloyd will "NEVER" get laid!
"yourslelf" - Go fuck "yourself", Mongolloyd!
"You must really hate be because" - Lardassed Mongolloyd really hates
the English language, too!
"Woger" - Mongolloyd shows off his cocksucking lisp again!
"Roger Wiseman better know as the" - Mongolloyd, better "known" as the
eternal virgin and mentally ill retard.
"Secwet" - Mongolloyd is queer and proud.
"turd in the punch bowel." - Mongolloyd knows about bowels, not
"bowls". Mongolloyd eats on the floor and in bowel cavities.
"he was refused by the Air Force in 1978" - Mongolloyd, how does one
get "refused" by any military? Especially when he was honorably
discharged a year earlier?
"was sent for a 90 observation period " Dumbfucking fuckhead, what is a
90 observation period???? BWHAHAHAHAHA
"shoudl" - Mongolloyd "should" really shut the fuck up.
"Here is" - Here "are" some more examples why Lardass is a fucking
imbecile.
"Woger" - Lardass is here and QUEER!
"Goddman that Lloyd is sexy!" - But that Mongolloyd is so sexy he is
still a VIRGIN. BWHAHAHA!!!!!!!!!!
"laugheds" - Mongolloyd was always "laughed" at.
"I have off this newsgroup for over 2 years!" - Mongolloyd should "off"
himself, instead of "being off".
"I have my own internet Talk show, what can be said about your useless
self." - Mongolloyd has no listeners or anything useful to say. He's so
"useless,"
"that's what can be said" about him.
"You are very useless on here, jon" - While Mongolloyd Davies is
useless on and offline.
"Even used up toilet paper has a use, you sure dont!" - Most people
flush "used up toilet paper, " Mongolloyd eats used up toilet paper,
"don't" he?
"I'll shot to kill" - Lardass, you couldn't handle a cap gun.
"Re,omder" - Lardass always leaves us a "reminder" that he is as smart
as a rock.

"resuce" - Mongolloyd can't "rescue" himself from his own stupidity!

"maocked" - Mongolloyd fucks up again, no wonder he is "mocked" for his stupidity!!!

"tipe" - If Mongolloyd the Lardass would pull his malformed head out of his ass, he could "type" correctly.

"pregant" - With his looks, Lardass Davies never has to worry about getting a girl "pregnant."
"when thet saw" - And when "they" saw Lardass' whimpering, they knew he was a big fucking PUSSY.
"Mayeb" - "Maybe" somebody will feel sorry for you and give you a charity fuck, but it's doubtful, Mongolloyd!
"tmorrow" - Mongolloyd will never get a woman, "tomorrow" or any other day.
"Palastine" - Mongolloyd couldn't find "Palestine" on a fucking map or anyplace else.
"Woger the notsowiseman" - Mongolloyd the eternal idiot fucks up and shows off his cocksucking lisp again.
"I hope kills himself" - Mongolloyd wishes he had killed himself.
"agruement." - Mongolloyd is a fucking imbecile, no "argument."
"You're posts" - BWHAHAHAHAHA.."your" fucking stupidity stands out as well, you fucking idiotic fat fuck.
"Globin Woger" - Mongolloyd the 5'6 280 pound garden gnome makes good spell and IKYABWAI.
"Go aheah" - Mongolloyd never can get "ahead" of his stupidity.
"ssomething" - Mongolloyd "ssure" (his spelling) did fuck up again!
"pictures show email them" - Lardass "should" know better then to "show" his stupidity.
"mor" - Mongolloyd gets "more" stupid by the minute.
"celbrating" - Mongolloyd is "celebrating" his stupidity.
"palgues" - Lardass Davies is a "plague" that needs exterminated.
"have the nerver" - Lardassed Mongolloyd "has the nerve" to criticize others.
"Golen" - Mongolloyd's fuckups are "golden" ammunition against the dumb fat fuck.
"posts my closet" - Lardass "by" default fucks up again.
"Froce" - Mongolloyd tires to spell "force", what his drunk daddy did with his dick on Mongolloyd's asshole.
"AUTHROIXATION" - Mongolloyd Davies never needs "auhorization" to be idiotic.
"morrse" - Lardass can't pass 5 wpm "Morse" code.
"netwerk" - Mongolloyd is part of the idiot "network."
"characture" - Mongolloyd is a "character"..a villiage idiot.
"Learn to spelll" - Lardass fucks up again!
"describes to the T" - Mongolloyd is an IDIOT, that "describes him to a T."
"a peace of me" - We take a "piece" out of Lardass' ample ass on a daily basis.
"bus fair" - Lardass can't pay his own bills on time , much less anybody's "bus fare."
"waht" - "What" do you know, Lardass fucks up again!
"to pay for you" - Lardass you can't "pay for your" own expenses.

"HELLUVA ALOT" - Lardass' English skills are not "a Hell of a Lot" of help to him.
"mentionm" - Lardass never wants us to "mention" or point out his numerous fuck ups.
"your are" - Mongolloyd, "you are" one of the stupidest assholes on the internet.
"alone may to much " - Lardass's sentence construction "alone MAY be too much" to his tiny brain to handle!

You can always tell when you are getting to Woger. He gets to flustered to type." - Mongolloyd must be getting flustered, "too," BWHAHAHAHAHAHA!!!!!!!

"Woger make false bad spell" - Lardass "makes" and ASS of himself, again.

""Mongolloyd". Isn't even word," - BWHAHAHAHA Mongolloyd is English-impaired.
"mentaly illed" - Mongolloyd knows all about being "mentally ill."

"Woger" "femine" - Mongolloyd shows his "feminine" side when he lusts for "Roger's" cock.
"Wheer" - Mongolloyd always wonders "where" his brain is.
"scooterr" - Mongolloyd never could have a "scooter" his fatass was too heavy for one, even if they had semi-truck shocks and springs.
"stal" - Mongolloyd's "brain" is permanently on "stall".
"aymore" - Mongolloyd never tries, he just whines "anymore".
"talkjing" - Lardass never has any women "talking" to him.
"cant" - Mongolloyd "can't" use correct punctuation.
"im" - Mongolloyd, "I'm" sure you will die a virgin, you dumbass!
"i" - Lardass, "I" know you are a fat whining cunt.
"may as wel" - Mongolloyd "may as well" kill himself.
"lefty alone" - Lardass masturbates with which hand, "his "left alone."
"NIM Busters has run its coarse" - Of "course," Mongolloyd fucks up his sentence!
"Wlardass" - "WMongolloyd" "wfucks" "wup" "Wagain"....

"Wheating" - Lardass has "cheated" on everyhting he's every tried to do, since he's so incompetent and inferior, and he still fucks up.

"Wabbi Woger" - Mongolloyd thinks any dick is a good dick to suck.
"Woger" - Mongolloyd's been sucking dicks again
"others" - Mongolloyd can't fathom "others'" hatred for his useless fat ass!

"You can always tell when you are getting to Woger. He gets to flustered to type." - Mongolloyd must be getting flustered, "too," BWHAHAHAHAHAHA!!!!!!!
"imput" - Mongolloyd's brain has no "input"! Mongolloyd one stupid fat faggot.
"Hundred's" - Mongolloyd couldn't count to one much less "hundreds"
"dopesnt" - Mongolloyd "doesn't" have a command of the English

language!
"Wait till" - Mongolloyd we will "wait until" you compose a coherent sentence, but it will be a long wait.
"We wn't" - Lardass Davies, you should fuck off with your stupidity so "we won't" see it ever again.
"Woger is now awoke" - Mongolloyd is never "awake."
"is too stupid to under awoke" - oh the irony, Mongolloyd!
"I shits my pants" - Mongoolloyd sure does and eats it, too!
"treasing" - Mongolloyd likes "teasing" nigger assholes with his syphilitic tongue.
"It's being TOS even" -Mongolloyd the only thing you TOS is your tiny dick!
"peoples" - Mongolloyd always steals other "people's" lines!
"I really wish Steve wasn't suck a pussy and would come back to this board" - Mongolloyd makes good fucked up sentence! Mongolloyd made a Freudian slip when he used "suck" instead of "such".
"I think it is long since past time when you closed this shitty board!" -Mongolloyd smoke bad weed!
"wraped" - Mongolloyd has frequently "wrapped" his syphilitic tongue around a nigger's asshole!
"hig" Who knows what the Athens Asshole means?????
"teir" - Mongolloyd is Belle Plaine's "Forrest Gump," As to his retarded peers, he's "their" Camp-We-Can-Do's star pupil.
"tribes" - Mongolloyd's "tribe's" name is Retardos!
"abou" - "About" this time, Lardass the alcoholic fucks up!
"till" - "Until" Mongolloyd learns English, he'll always be ridiculed.
"din't" - Mongolloyd "didn't" ever finish high school!
"stuipd" - Lardass Davies is really "stupid," isn't he?
"are we know" - Mongolloyd has a hard time posting in English. Being more stupid, "are we now," Lardass?
"I just you like a brother" - Mongolloyd would take it up the ass from you just like he did from his brother, too.
"I've been to two Hamfest" - Mongolloyd's never been to two English classes, though!
"Wogie" - Mongolloyd shows off his cocksucker's lisp.
"his paint size" - Mongolloyd wears size 50 "pants," does he also wear "paint" because he is a walking billboard for obesity?
"HAMFEST'S" - Mongolloyd has never shown at any "hamfests"! He's too big of a coward!
"Woger" - Lardass likes to think of "Roger" when he sucks nigger dicks!
"West Vagina" - Yes, "Virginia," Mongolloyd hasn't ever seen any vagina, west or east, north or south.
"reconize" - Mongolloyd, your fuckups are easy to "recognize"
"thopught" - Mongolloyd never has any "thoughts", except to show off his lisp again!
"Who hear likes" - Mongolloyd nobody likes you, "here" or anywhere!
"Wogie" - Lardass Lloydie's lisp exposes him again!
"really beated" - Mongolloyd really "beats" off, since he can't get a woman.
"Woger" - Mognolloyd makes like faggot.

"Curtain's" - Mongolloyd always fucks up when he hides behind his "curtains" of sockpuppets.
"cocksuckers" - Lardass always fucks up and punctuates incorrectly, must be his "cocksucker's" lisp.
"spinctor" - Mongolloyd has the "spinchter" muscle the size of a #10 washtub, since his drunk daddy, his felon older brother and his mommy's dildoe has stretched it out.
"reconized" - Lardass Davies stupidity is easily "recognized".
"porpuse" - Mongolloyd's stupidity is on "purpose"!
"worlds" - Mongolloyd is the "world's" worst speller!
"comfortbale" - Mongolloyd confessed he is "comfortable" looking at dicks all day long.
"For the recod" - For the "RECORD," Mongolloyd is retarded!
"all these yours" - "All these years" of posting, and Lardass has yet to post in English.
"I have no worked for 22 days straight" - Too bad you don't concentrate on your English for the same legnth of time, Porky!
"Roger'" - "Roger's" what's always on your little mind, Porky!
"Shittpacker" - Mongolloyd has a "shitpacker" for a father.
"revoaked" Mongolloyd your life will soon be "revoked."
"Upeset?" BWHAHAHAHAHA..Mongolloyd you get "upset" so easily, BITCH!
"knumskull" - Mongolloyd, I could fucking care less since I'm not Catholic, you fucking "Numbskull"
"BEVERY FUCKNH AWARE" - Mongolloyd should "BE VERY FUCKING AWARE" of his surroundings and who is watching him!
"orafice" - Mongolloyd has had a big greasy dick stuck in every "ORFICE" in his obese body.
"YOUR STILL" Mongolloyd, "you're still" a fucking imbecile!
"Funn" - Mongolloyd's face sure is "FUNNY" looking.
"Your whole life has past you by." - Lardass, your life has already "passed" you by the minute you were shit out of your whore mommy.
"Eldery" - If you were a bit more "ELDERY," Porky ,you would be a better speller.
"Jelous" - Nobody, I repeat nobody is "JEALOUS" of a retard like Mongolloyd Davies!

"He 4F for the Air Force" - Wrong, Mongolloyd, you are 4F for LIFE!
"plagarize" - Mongolloyd, you couldn't even "plagiarize" from "See Jack Run" correctly.
"Is like our her Steve and Lloyd" - Mongolloyd fucks up again! Mongolloyd calls himself and Holstan a "her."

"to much" - Mongolloyd tries to communicate in English but it's just "too much" for his tiny brain to handle.
"beutiful" - Mongolloyd is as "beautiful" as a WART HOG!
"Trough" - Mongolloyd can't get that everybody sees that he is fucking stupid "THROUGH" his malformed skull.
"would all upset" - Try posting in English, DUMBFUCK Davies!
"backpedd;e" - Mongolloyd "backpedals" when he gets upset and misspells words!
"Good are you ever pathetic" - Mongolloyd, Goddamn, are YOU ever

pathetic when you fuck up like that.
"Make ne" - Mongolloyd is trying to say "make me" like a little girl, but naturally, he fucks it up! HAHAHAHAHAHA!!!!!!
"I'm not into, unlike you" - Mongolloyd isn't into looking smart, either.
"Rare end" - Lardass, you "rear end" is so big, when you back up, you beep.
"hygienne" - Mongolloyd hasn't got any "hygiene" habits.
"suprise" - "SURPRISE", Mongolloyd fucks up again!
"poved" - Mongolloyd "proved" he is a fucking idiot once again!
"Momma" "marbels"- Your Crackwhore "Mama" knows you don't have all your "marbles", Porky!
"secoondly" - Mongolloyd is trying to count the times he has given blowjobs "secondly"
"atten" - Lardass you didn't "attend" school, either!
"backwerds" -Mongolloyd is always ass-"backwards!"
"Were" - "We're" sure you are a fucking moron, Mongolloyd!
"he's laugh and go on" - Lardass we laugh at your fat dumbass, and go on with our fucking lives, but you don't have a life!
"tradion" - Mongolloyd's "tradition" is to fuck up!
"Mitzah" - Porky the Jew didn't have anything to cut off at the Bar "Mitzvah!"
"mines for his baby batter" - Mongolloyd shouldn't drink , take drugs and post!
"Ralley" - Mongolloyd should really try to "rally" his few remaining brain cells!
"Vagina" - Something Lardass Davies has only sees when his whore mommy shit him out.
"Your welcome" - Mongolloyd, "you're" one stupid fucking retard.
"Llouyds" - "Lloyd's" such a fucking DUMBASS, he can't even spell his own name correctly!
"stagnanat?" - Do you mean "stagnant" like what is between your fucking Dumbo ears, Mongolloyd?
"accomadations" - Do you mean "accommodations" which are quite unlike your flithy HUD apartment in the Athens, AL ghetto?
"oppurtunity" - Mongolloyd never misses an "opportunity" to be stupid.
"Stubbenville" - Mongolloyd couldn't find WV on the map much less "Stubenville, Ohio."
"copy & past" - Mongolloyd spams with his "copy & paste" of every fucking idiotic thing he sees!
"appretince" - Mongolloyd makes good spell for a quarter-wit "apprentice".
"glorius" - Mongolloyd make "glorious" FUCK UP!
"weekened" - Mongolloyd's "weekend" consists of getting drunk and whining about another man! That is, between delivering pizzas.
"Woger mkae" - "Roger make"s Mongolloyd look like a fool, time and time again!
"noddle" - Lardass, your little "noodle" of a dick is like a fucking shard of thin spaghetti!

"usae" - Mongolloyd never "use"s any fucking sense or correct spelling.
"I ambored" - Mongolloyd, you are an idiot as well!

Mongolloyd make good spells!

John,

You could make the same assertion about a driver's license. Memorize some rules and take a road test.

Do you support eliminating motor vehicle tests? Perhaps only for college educated folks?

Might it make sense to require folks to know where the band edges are, or would you think it doesn't matter.

If you travel to the U.K., do you think it might be smart to understand that they drive on the *left* side of the road rather than the right? Even if you are a pedestrian?

I suspect you'd be upset if someone started transmitting on your Direct Tv frequencies and killed your reception. There are rules and folks wishing licenses are supposed to demonstrate some knowledge of those rules. These rules do not require the calculus, yet even a college grad has to demonstrate some knowledge of them.

I can't imagine any person becoming a Ham because they simply want to
"chat with someone around the world".

In the first place most of my DX contacts are pretty terse, and don't
fulfill any "chatting needs". Not that I have chatting needs!

There certainly are women in Ham radio, and although a minority, they
are probably no more of a minority than women's representation in other
technical fields. This would mean that any problem is shared with those
other technical fields, and not a Ham radio specific problem.

>
>
> Trap dipoles don't have to be on bands that are harmonically related.

Perhaps we should go back to what Jim posted with his original question:

Jim's quote
*> Right now we have 9 HF/MF bands, plus some spot frequencies in
*> the "60 meter" region.
*>
*> Suppose that at some point we hams had the choice of either:
*>
*> 1) New, very narrow bands elsewhere in the HF/MF spectrum (say, 2.5 to
*> 2.6 MHz, 6.0 to 6.1 MHz, etc..
*>
*> or
*>
*> 2) Widening of existing bands and/or change to worldwide amateur. Such
*> as 7.0-7.4 becomes worldwide exclusive amateur, 10.1 to 10.2 does the
*> same, 14.0 to 14.4 (which the band used to be), etc.
*>
*> Which would be preferable, if we wound up with the same number of kHz
*> overall?

End Jim's quote.

Under Jim's scenario, we would be adding several bands.

That trap dipole would be interesting indeed! Likely mostly traps.
Maybe I'll try to design one. Jim will have to give me the specific
frequencies that will be added in his scenario.

And trsp dipoles are not a very universal answer. In my situation I
would have to make a loaded trapped dipole for 80 meters and to cover
other bands. Now *that* would be a hoot! And quite heavy.

>
>> All in all, no thanks.
>>
>> - Mike KB3EIA -
>
>
> Congrats. You've just made "Full" member.

Full member of what? I've given my opinion, and it is based on some technical and practical reasons.

Your reason is that my opinion makes me a full member of something because I gave an answer based on those reasons.

If you want to say I'm wrong, then fine. I don't care about being proven wrong. Show me *why* my opinion is wrong. If I can't refute it, I'll admit it and I'll learn something from you.

But otherwise you're just castigating me for the sake of doing it.

You noticed that too?

I'm waiting for the specific frequencies Jim is thinking about, so I
can design a multiband antenna for this idea.

I suspect I'll not be too successful.

Maybe some others might have more success. Hopefully they will share
their design with me.

Dee, this John Smith, whoever he is, for some reason has a hard on
against ham radio. I begin to doubt he is even licensed. Probably just
some cber who is ticked because he can't master the code and pass the
test so all he can do is beat his gums about how usless ham radio is.

Oh, what address would that be wogie, since you seem to know so much how
about posting it? Say, still claim you have that 2nd class ticket which
morphed into a *restricted* radio operators *permit*?
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!
So when are you going to post proof of this letter you claim I received
from the FCC fatboy?
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!

Kelly:

Well, you certainly know enough that you wish to have your great
knowledge put forth--let's have a go at it...

What percentage of amateurs are women, it is 1% or 2% I have forgotten?

... oh, I love that argument!!! Let me see if I have it correctly,
either:

1) Women are too stupid for the technical fields.

2) We are no worse than any other technical field about baring women.

ROLL!!!!!

BROADCASTDB - Live Radio and TV database : Just Added:

http://www.broadcastdb.com/

More than 7000 live radios and 750 live televisions.

New this week :

Listen:

Chimpsy Radio - Comedy/music. Original comedy/music featuring local
music from Orlando, FL - Florida/USA
footballstreams - Live Football on your PC - UK
Saint Tropez Web Radio - The Web Radio Of St Tropez - Various Music -
Saint Tropez/France
Paradox Room - Alternative - Different music. 21:00 gmt
Sunday/Tuesday/Thursday - South Wales, UK
- Saint Tropez/France
Radio Gibraltar - Also 92.6 and 100.5. Local Radio - Gibraltar

Watch: The latest micro-series from FTV: Shoot Me!

TV:

Faikham TV - Bangkok / Thailand
Prachinburi Internet TV - Bangkok / Thailand
HighSpeed - Multiple TV channels - Bangkok / Thailand
News1 - News - Bangkok / Thailand
Nation Channel - News - Bangkok / Thailand
Nation Biz 152K - News - Bangkok / Thailand
BTV 5 392K - News - Bangkok / Thailand
BTV 9 109K - News - Bangkok / Thailand
BTV 11 392K - Music, News - Bangkok / Thailand
BTV ITV 392K - News - Bangkok / Thailand
Kimeng 328K - Finance News - Bangkok / Thailand
T Channel 141K - Music videos - Bangkok / Thailand
UBCi News 197K - News - Bangkok / Thailand
UBCi Sports 197K - Sports - Bangkok / Thailand
Thailand's Next top model - Next top model channel - Bangkok /
Thailand
Thailand's Next top model - Next top model archive videos channel -
Bangkok / Thailand
UBCi Chic 197K - Fashion channel - Bangkok / Thailand
MTK 100K - Regional Program from Tarnow. - Poland
TOYA TV 166K - Local TV news channel.
TV Biznes - News and Business TV from Poland - Poland

TV Fly - Internet TV station with pop and hip hop video clips - Poland
Christ Embassy Church - Just watch this station and you will enjoy
it...

http://www.broadcastdb.com - The world's broadcast database

Online guide of radio and TV worldwide - "BROADCASTDB"

Radios, TV, News, radios from all over the world !
A Database of all Live stations on Internet.

I think first you would have to get a noticeable number of women into ham radio--then argue if they are being treated fairly--at this point they have been effectively banned!!!

I just support removing code because no new hams are using it in any meaningful numbers.

The new state of the art hams are interested in hooking a modem up and interfacing the radio to the computer...

Hook up a code key and they loose interest immediately...

Now, a bunch of old guys who are computer illiterate have no choice than to try to amuse themselves with a damn key...

Kelly:

Now I really worry about you--you pose an argument which really starts to define you as a fool!

Are you claiming I can't tune through all the ham bands in relatively short order and be stuck numb with the fact that there are ALMOST NO WOMEN to be heard?

Gesus man, you need some type of medication to even stay relevant!

> "chat with someone around the world".

Whew, that brings up a tale Michael . . I know at least one ham who has done just that for decades.

About the time WW2 ended I got into building crystal sets then I moved into cobbling together simple tube-type receivers based on articles in Pop Science and Pop Mechanics. The DXing bug had already bitten based on my fascination with finding far off stations in the high end of the AM BC band with the BC radios my folks had. The die was cast: I was into radio big time but I was basically clueless about ham radio until I eventually started SWLing and found scads of hams yakking on 75 & 40 AM.

I was also a Cub Scout around that point in time. One night there was a civil defense drill which I discovered would include ham radio communications and the Cub pack. That opportunity really rang my chimes and I wormed my way into becoming a messenger boy for one of the mobiles.

The ham and I motored around town passing traffic back and forth amongst the hams and the simulated "disaster sites", etc. That was my first exposure to hands-on ham radio. The ham was Gene Reynolds W3EAN who went out of his way to answer my unending stream of questions that night. I probably drove him nuts but I think he enjoyed it. There was no turning back after that night, I was gonna become a ham.

A number of years later I ran into Gene again amongst the DXing and contesting crowd around here. In addition to being a DXer Gene was also a fundamentalist "radio missionary" who used his station to "take the word" particularly to Russians by "chatting with someone around the world" as you put it. Thousands of times! Check his bio in QRZ.com, I think you'll enjoy it.

> In the first place most of my DX contacts are pretty terse, and don't
> fulfill any "chatting needs". Not that I have chatting needs!

It's also considered impolite to tie up dx stations with chats unless they initiate them.

> There certainly are women in Ham radio, and although a minority, they
> are probably no more of a minority than women's representation in other
> technical fields. This would mean that any problem is shared with those
> other technical fields, and not a Ham radio specific problem.

Exactly. Let's hope this "Smith" clown has the same short attention
span others of his ilk have demonstrated in the past and wanders off
the list. He's even posting his mindless drivel in the Mech Eng and
dot.antennas NGs for gawd's sake. .

> - Mike KB3EIA -

w3rv

(PS) Yo Micollis: Duty beckons. One of Gene's OLD and I mean *old*
dxing buddies is Nate W3CNP, the guy you sat with when he ran a few Qs
on 20CW at the last of our Clayton Park FD "experiences". Check his
particulars in QRZ.com. I ran into him a few weeks ago at K3PAQ's
memorial service, he's fine. Nate's ticket is floating in the grace
period. I got EAN set up to renew, now it's *your* turn, launch Nate on
his way. We need all the far-end geezers we can get properly licensed
to keep the average age up in the hobby.

I'd say that they weighed the task of learning code and decided
it wasn't worth their time. It's not like grammar or high school
where you have no choice but to learn the stuff some curriculum
committee decided you had to learn. So far I never had need for
Spanish or knowing about King Louie the 7th of France since
high school 33 years ago. As to code, it's "required" if you
want an HF capable ham license. Some people will decide not
to bother and go do something else.

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!

Hey wogie, I would like to come by and see those antennas you have up.
You know the ones that give negative SWR, where you get out more power
than you put in. I would like to see just what kind of special antennas
you use to jam on 20 meters that have good bandwidth so when you play
music for jamming you get the full frequency range of the audio.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!

That makes it a real PITA to people who are good at book
learnin' and not so hot at motor skills.

That makes ham radio that much harder to "sell" to the
PhDs and such people. Code is something that can be
outperformed by various signaling and signal processing
methods (JPL doesn't use Morse code to communicate with
their deep space probes). Sure, Morse code requires a
bare minimum of technology, but today technology is
cheap and reliable. Not like 50 years ago with vacuum
tubes. No other radio service uses Morse code for
anything beyond some automatic IDers. So why require it
anymore.

Poor Butt Cornholer of his own kids and grandkids, he sure can't
prove he ever had a "1st Class Commercial license" any more than
he can prove he has a "pilot's license."
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!

Still flying those model airplanes and think you have a "pilot's
license?" BWHAHAHAHAHAHAHA.

Roger's 2nd class commercial ticket was valid from 1976-1981.
Since he let it expire his grant date of November, 1981 (valid
to the present) on his Restricted Radiotelephone is right there
on the FCC database. (You lose, in other words.) If you'd had a
real 1st class radiotelephone it would've been grandfathered in
the database as a GROL, like so many others were. But no, you
didn't have one to begin with, imaginary "pilot's license" boy.
You couldn't pass a "simple" (in your words)Extra exam today,
and neither could you pass a commercial FCC license exam in
years past. Caught you in yet anopther lie, kiddie diddler Buzz
Cornholer.

> Just what percentage of amateurs are women? Do you even know?

I know it's at least 5% of US hams. Probably more like 8%. Which is
many
times the 1-2% you cited.
>
> I bet you damn well know they are rarer then space aliens sightings!!!

Not where I live. Not on the air, either - if you check out modes other
than voice.

Right here in rrap, we have Kim, W5TIT, and Dee, N8UZE.

W3RV mentioned W3CUL, Mae, perhaps *the* premier amateur radio traffic
handler of her time. I did not know her, but I did know Lou, W3WRE,
quite well in the 1970s. She had been a commercial operator as well as
amateur, knew both the landline and radio codes, and was a topnotch
operator who had many nonradio interests. The fact that she was a half
century my elder did not prevent us from becoming friends. I learned
a heck of lot from Lou, not all of it radio, either.

I've also had the pleasure of working the youngest person ever to
earn the Amateur Extra license. She got that license at age 8, while
in the third grade, a few years ago. Good CW operator - she's a regular
in the contests, and turns in very respectable scores.

I've seen plenty of new hams use Morse Code on the air. And plenty who use other modes. What information do you have to show that "no new hams are using it in any meaningful numbers."

> The new state of the art hams are interested in hooking a modem up and

Some are - some aren't.

> Hook up a code key and they loose interest immediately...

Depends on how you present it. And the word is "lose"....

> Now, a bunch of old guys who are computer illiterate have no choice than
> to try to amuse themselves with a damn key...

Well, that leaves me out, because I'm neither old nor computer illiterate.

> BEFORE the advent of either the computer Mouse or GUI.

Actually, both the mouse and GUI came from Xerox's Palo Alto Research
Center,
about 1971. That center produced the first "personal computer" in its
modern form (a computer for each user rather than a timeshared
mainframe,
networking between users' computers, the GUI and mouse, filesharing,
etc.)
Xerox management did not realize what they had right in front of them,
and
the ideas were produced and marketed by others.

Some of us were using computers back in the punchcard and paper-tape
days.
>

And it had a few channels, one mode and 5 watts of power at most.

> Of course that was "CB" and therefore "lowly" and, to some,
> "criminal." :-) [all before the GUI and mouse]

The way many cb radios were used was in clear violation of the
Communications
Act and FCC regulations.

> I have to admit that putting up one's ham station DOES
> take some smarts.

Yes, it does.

> One copies an antenna design out of the
> ARRL Antenna Handbook, getting somewhat close to the

I didn't miss any of them, Len.

> You've MISSED the unmanned vehicle
> missions and negated the tremendous data gathered by the
> Mars rovers and the trips to the outer edges of our solar
> system.

Nope. Didn't miss them at all. I remember all the way back to
the Mercury flights with chimps ("A monkey's gonna make the first
flight!")
Shepard, Grissom, Glenn, the Gemini program, the tragedy of the Apollo
1
fire, the Mariner, Viking, Pioneer and Voyager programs, etc.

Now Cassini sends incredible pictures and data from Saturn. No sirens
found on Titan, though.

> You two have completely ignored when the "personal
> computer" made its debuts beginning in the mid-1970s, and

> ranging viewing audience, then proclaiming its "greatness."
> Neither is one a DO-er by explaining what they "will" do
> and expecting plaudits BEFORE they've ever done anything.

You mean like the person who posts their military and work experience
over and over and over and over and over and over and over and over and
over and over and over and over and over and over and over and over and
over and over and over and over and over and over and over and over and
over and over and over and over and over and over and over and over and
again, in a failed attempt to win the
praise and admiration of others, even though it has nothing to do with
amateur radio?

Or the person who says "I'm going for Extra right out of the box", but
as of
5 years, 5 months and 27 days hasn't done so?

Or the person who talks endlessly about their supposed technical
knowledge
prowess but cannot show a single home-made amateur-radio-related
project or practical article?

Yes - both in total numbers of US hams, and the ratio of hams to the
total US population.

In recent years the totals have begun to go down, and the percentage of
the
population as well. Reducing the license test requirements in 2000 has
not brought growth, yet some folks insist that more and more reductions
in test requirements are the only solution.

BINGO!

Yet it is exactly the fact that amateur radio *is not* the internet
that is
the draw!

Robert:

Yes, well, here in calif--you must have noticed the "freebanders." At least every major city has a club of them... I used to be on a e-mailing list of theirs and kept up with their activities--they now have went underground and clamped up--just hear 'em on the bands now...

Warmest regards,
John

I'd say those figures are certainly pressing the envelope... either way,
you don't see 'em on the bands in those numbers... your 1-in-20 seems
more like a 1-in-a-hundred-or-better to me!

>

No but there is a standardized set of Q signals and other widely adopted abbreviations that permit one to carry on a very basic albeit limited conversation even though neither of you knows the other one's language.

As in many activities, there is a "standardized vocabulary" if you will. For example, music generally uses Italian terms (although the French & Germans tend to resist) that. I do not speak Italian but if the conductor says "rubato" or "accelerando", I know what he wants us to do. He might not speak a word of English and I might not speak a word of his native language but we can communicate in a limited fashion with the standardized music vocabulary. Similarly, ballet terminology is in French. Because of that, the student and teacher can communicate regarding ballet movements even if neither speaks French and neither speaks the others language.

Build transverters. Lots and lots of transverters. Then equipment of any age could be made to work.

Definitely avoid generalizations. I originally got interested in ham radio because my husband of the time asked me to be involved with him. Code was part of the class and test. I didn't particularly have any feelings against it or for it. However now I enjoy it.

How you managed to twist Mike's words to come up with this interpretation is amazing. He neither said nor implied anything of the sort.

>
> 2) We are no worse than any other technical field about baring women.
>

He said nothing about barring women from technical fields. Again how you managed to come up with this inverted interpretation is one of the mysteries of the world. Women choose not to go into technical fields for their own reasons. That includes hobby activities like ham radio.

Michael's own words:
"There certainly are women in Ham radio, and although a minority, ..."

What does that mean--they are being held out by the old farts? The
women too want no-code?

Just what is the reason he was claiming?

Many of us do not call CQ but will answer them. Many others stay on CW
where you cannot tell if we are women unless we tell you or you look us up
and ASSUME based on our names that we are women.

I work several other women in every voice contest in which I participate and
they are NOT the same ones each time.

Dee:

That is another interesting statistic--most women in radio are the wives of hams--there is certainly some interesting reasons behind that, I am sure... I think it directly relates to "Good-Old Boy's Club" but them accepting the wife, daughter, relative of a member of the club...

Source record: 110261
Cross-posted to: rec.radio.amateur.policy,alt.cocksucker.roger-wiseman,alt.radio.scanner.flame_fest

On Wed, 15 Jun 2005 23:08:32 +0200 (CEST), Secwet Woger <Uberloser@cypherpunks.to> wrote:
:
: Newsgroups: ... alt.fuckhead.stagger.lee,...,alt.cocksucker.lardass.lloyd-davies
: Organization: mail2news@dizum.com

Indeed, Woger, you've achieved a much higher count of newsgroups
dedicated to your name than anyone else. According to newzbot.com,
the following groups can be found on a number of Usenet servers:

* alt.asshole.roger-wiseman
* alt.cocksucker.roger-wiseman
* alt.fag-lamer.roger-wiseman.chucklehead
* alt.fan.fatassed.woger.wiseman-dicksucker
* alt.idiot.roger-wiseman
* alt.pedophile.roger-wiseman
* alt.binaries.pictures.erotica.gaymen.ab8mq
* alt.fan.AB8MQ

Newzbot claims that only one free server in the world carries the
lloyd-davies newsgroup, and that the newsgroup contains no messages.

It looks like you win. Aren't you proud of yourself?

====================
"KC8JBO is an idiot in my opinion." -- Stephen K. Gielda, owner of
COTSE, in message <MPG.158a2f2795d3db95989ba5@news.supernews.com>

"Now, now, after I feeling sorry for you after reading your 'what it's
like behind the scenes at COTSE' you insult one of your users.
Not very prudent. I guess it shows what you're really all about. You
claim to protect freedom of speech." -- Roger Wiseman's response to
Gielda's statement

====================
"And that fat hog Pam shouldn't caterwaul with her hunchbacked fatass
mommy with the Xtian band anymore, she caused more stray dogs to come
around that run-down shack that Ovis is housed in. Another Xtian
hypocrite, that radio station is a known haven for child abuse in the
mound town. She is a fucking idiot." -- ab8mq in message
<akd8bpkce8@pita.alt.net>

====================
"Guess again shit-for-brains. Maybe I got back on Stratuswave through
somebody else signing up and just using their account on purpose, just
to piss you fuckheads and Stratuswave off. BWHAHAHAHAHAHA!!!!" --
AB8MQ in message-id <737588ee.0405211543.6e6d2ebf@posting.google.com>

==========
"Wrong again, FATASS, I told Pammy to go fuck herself after she called here, all upset. I guyess it was because she was behind giving the black system admin she has a blowjob in the server room and giving one to her dog." -- AB8MQ in message-id <737589ee.0405220528.371d3f66@posting.google.com>

==========
"Roger hasn't recieved 'repeat visits with the chief of police'. You ar a liar. He isn't about to get another one either, dumbass." -- Secwet Woger in message-id <b14c37cf833370abc4122a241ccf54c4@melontraffickers.com>

==========
In message <460958efdfed53d39cf6e878fe497940@userbeam.net>, Secwet Woger bragged about his Extra Class examination fame with the claim: "If poor chronic alcoholic and drug abuser Gopher face wouldn't drink so much because he is womanless, he could spell 'retested', 'dumb' and 'Rogie' and could actually pass an Extra license exam."

Conversely the written is a real PITA to people who are good at physical skills but not at book learning. We've got a few around here who breezed through the 5, 13, and 20 wpm code test but had to take each of the writtens multiple times and they had studied hard each time. They were not allowed to get out of the written or plead diminished capacity or anything else. They had to do it.

Well those PHDs had to learn the simplest of basics in their chosen fields when they started their journeys. There is "obsolete" information in every field that is often required learning as part of a basic understanding of the field.

He does not realize that it was this "bunch of old guys who are computer illiterate" who developed several of the digital modes and were some of the earliest amateurs to interface computers and radios.

At work it is not the "bunch of old guys who are computer illiterate" who cannot find their way around a computer but instead the new kids fresh out of school. It's the kids who cannot seem to figure out how to use the advanced features of the spreadsheets, wordprocessors, etc until someone leads them by the hand through it. The "bunch of old guys who are computer illiterate" are the ones who explore the software and become proficient in its many features.

It's how you mention it. Basically he specifically mentioned going to his
web site to buy things on which he made a profit. If he had simply said
"see the full text of the article on" say a recent FCC ruling that affected
ham radio, it would not have been a problem even if he had an ad right next

to the article.

Dee:

Certainly everyone over 50 needs to step back and let the younger men have a go--we are stagnated right now--I won't argue that point--it is MUCH too obvious...

What "modes" are you using? I am using a 56k modem my son modified to modulate a transmitter... any other person able to interface an old 56k modem to their computer can get the data... now a nice 10mbs per second mode would be nice, where is some cheap equipment?

I enjoyed the story, Brian. But I gotta break in here. What you have described is the real reason that people become hams. You were bitten by the bug, and it sounds like no one was going to stop you from becoming one.

I too was hooked early in life, although it took a long time to finally get my ticket. I'm just P****d that I didn't get it years earlier.

The idea of "recruiting" people into the ARS is likely never going to work - at least as far as snagging people that are thinking about a hobby, but don't know what to pick up.

If you wanna be a Ham - you *know* it.

A local oldster was inquiring as to when his license expired, because he couldn't find his F.C.C. Wallpaper. We help him figure it out. We need to keep the geezers on the air. I love talking to them. I hope someone is looking out for me when I'm 91!

Me too, now that you mention it. During the PAQSO party, I have worked quite a few women, including the twins from Erie County, PA. (sorry, I don't recall the callsigns at the moment. They even work in tandem. After working the first, she will ask you to standby to work the other one. It's confusing the first time, but now I look forward to at as two quick QSO's! 8^)

Most hams (male or female) got into ham radio because they were the relatives and/or friends of hams. New hams get into the hobby by contact with existing hams for the most part. My brother became a ham because I was one.

I've not seen any "Good-Old Boy's Club" attitude at all. When I joined the local club after moving to this area, I was single and none of the members had ever met or talked to my ex. They accepted me immediately as a fellow ham.

Thank you. I work with a number of female engineers, and they seem to
have no problem working with me. My opinion on the issue is based on
conversations with them. Especially one who bristles at being called a
"female" engineer. She says "Just call me an engineer, if you don't mind!"

What is obvious is that the younger people are inexperienced. You fail to realize that we need people of ALL ages involved and each contributes to the benefit of amateur radio (or any other activity for that matter).

And since there is no limit on the number of hams, there is nothing stopping the younger men from getting in and developing what they wish within the technical limitations of the medium (i.e. HF cannot support ultrawide modes without causing detrimental effects on the number of people who can use the bands simultaneously).

> What "modes" are you using? I am using a 56k modem my son modified to

You do realize that a 56k modem is no use on HF. There isn't enough bandwidth and the FCC rightly limits the speed of the digital modes. As to what I've worked, I used to do RTTY, Amtor, packet, and some others. All were deadly boring. I've put the equipment away to free up desk space.

I must disagree to some extent with this, Mike. There are people who would love being hams if only they knew about it and knew what it was like. I never knew I wanted to be a ham until after I became one. My ex dragged me to a ham class as something we could do together and I have to admit that it did not sound interesting at the time. I found that it was something I liked and now I would fight tooth and nail to keep my license.

If we are going to "recruit," we need to find those who would like it but haven't had the opportunity to know about it or to know enough about it.

I hope so too. I had the great pleasure and honor of speaking with W5BQU (Big, Quick, and Ugly) a year or two before he passed away. He was over 100 at the time and still in pretty good control of his faculties and still with a zest for life, enjoying those things he still could do.

In all my 43 years in engineering I've met a grand total of four woman
engineers, two MEs, one EE and a Chem E. Our contesting club alone has
three female members, an old girlfriend is a ham and I met W3CUL. Out
of Lord only knows how many engineers and hams I've met over the years.

Sorry that Jim's idea presented too many problems to be overcome.
Relax, it's not likely to happen. You're off the hook for needing a
light weight multi-multi-band antenna.

> If you want to say I'm wrong, then fine. I don't care about being

> I'll admit it and I'll learn something from you.

Emergency communications requires propagation. The more band segments
that you have, no matter that they are narrower, the more likely that
you will be able to communicate. Passing on more bands for want of a
band switch or a light weight antenna doesn't appear, at least to me,
to be in the best interest of amateur radio.

Dee:

I really can't believe some are so devoted to arguing as this while amateur radio declines...

First, I DO believe there is a problem with the numbers of licenses...

Second, there have been things tried, and there are just echos here of RE-TRYING failed ideas here--they didn't work then, they won't work now!

Third, I don't think anyone here is into any real want to do anything better--most are locked in a state of firm and heavy denial and the numbers must drop much more before this will improve...

Fourth, I DO believe time and Jim Haynie will provide real fixes--eventually...

Fifth, my opinion is that almost everyone here, to the last man/woman, is going to let things go to hell for their own self-interests--and that to me is as disgusting as someone masturbating in public--NO ONE ELSE ENJOYS IT!

So what is this hang-up you have about women, why do you think the bands should be populated with lots of women hams? As a whole, women aren't attracted to a technical hobby like ham radio. Ever go out to the model airplane radio control field? See lots of women there flying toy airplanes? How many women get their pilots license as compared to men? Ever go to a quilting meeting? How many men did you see there? Ever go to an antique radio swap meet? You will find a lot more men collecting and fixing old radios than women. Do you collect dolls, tea sets, china dishes? No? Lots of women do.

When I taught Novice classis some years ago, there were always several women in the class and they ejoyed learning the code as much as anyone.

There are things that interest men as a hobby and things that interest women as a hobby, and most often they are different things.
If all you can see is doom and gloom for ham radio, I suggest you go back to the 'freeband' where you seem to think radio life is great.

???

There are solutions to both the rig and antenna problems. But
they aren't as easy as some would have us believe. More important,
unless a considerable number of hams equip themselves to use the
new bands, they aren't much help.

And does propagation varies that much between most of the bands we have
now? I don't think so.

It was argued that the difference in propagation between 80 and 40
could be great enough that access to a band near 60 was needed.
And we almost got a full band there, except that NTIA reversed its
support after 9/11.

But the jump from 80 to 40 is a doubling of frequency. From 40 to 20 is
a doubling also, but we have 30 meters in between. Would a band at,
say, 8.5 MHz be that much different from 7 and 10 MHz?
Or would we be better off with more worldwide-exclusive-amateur-kHz on
40 and 30?

> > Trap dipoles don't have to be on bands that are harmonically > > related.

I've built and used trap dipoles. The more bands you add, the more
complex the adjustment procedure becomes.

Does anyone else here have experience building trap dipoles from
scratch?

Under one of my scenarios, anyway.

> That trap dipole would be interesting indeed! Likely mostly traps.
> Maybe I'll try to design one. Jim will have to give me the specific
> frequencies that will be added in his scenario.

Let's say the following additions/changes were made:

A new band 50 kHz wide at 2.7 MHz
A new band 50 kHz wide at 8.6 MHz
A new band 50 kHz wide at 11.9 MHz
A new band 50 kHz wide at 16.0 MHz
A new band 50 kHz wide at 19.6 MHz
A new band 50 kHz wide at 23.2 MHz
A new band 50 kHz wide at 26.4 MHz

or

5.1 to 5.2 MHz instead of 5 channels
7.0 to 7.3 worldwide exclusive amatuer
10.1 to 10.2 worldwide exclusive amateur
18.05 to 18.2 worldwide exclusive amateur

> And trsp dipoles are not a very universal answer. In my

You're arguing more than anyone here at the moment, John.

> First, I DO believe there is a problem with the numbers
> of licenses...

OK, fine. How much are the numbers down, percentagewise, from
the peak? How about the ratio of hams to the overall population?

Show us some solid numbers.
>
> Second, there have been things tried,
> and there are just echos here of

I agree!

In 1987, 1990, 1991, and 2000, the test requirements for an FCC-issued
amateur license were successively reduced. The greatest
reduction came in 2000, when the code tests were reduced from
three speeds to one, and the written tests reduced from 5 tests
totalling 190 questions to three tests totalling 120 questions.

And yet the numbers are now declining.
>

"Meaningful numbers"...

That suggests that you ahve some definitive research
numbers...Some scientifically controlled poll.

Please cite the poll...Or was this just your "opinion" based upon
no one wanting to talk to you?

> The new state of the art hams are interested in hooking a modem up and
> interfacing the radio to the computer...

Great...that's what some are interested in...

> Hook up a code key and they loose interest immediately...

No...

You meant YOU lose interest immediately.

> Now, a bunch of old guys who are computer illiterate have no choice than
> to try to amuse themselves with a damn key...

Yep...there it is.

For some uses the internet is better than ham radio. For other
uses ham radio is better. The competition is for time only.

> And, the only way it can is drop the code...

Do you mean hams should stop using Morse Code, or that there
should not be a Morse Code *test*?

In either case, how will that help ham radio compete for
time?

How would you know, John?

You've told us you don't use Morse Code. So how would you
know how many young hams there are using the mode?

You've made fun of the mode and those who use it. A young ham
who uses and likes Morse Code would probably just avoid you,
rather than get involved in a confrontation with you.

> Most are no-code licenses!

How do you know?

Here's a clue:

- Age information in the FCC database is incomplete. The birthdate
of some but not all licensees are in there. The times when age
information was collected are such that the ages of young hams may be
underrepresented in the database.

- Not all Technicians are "nocodetest". The FCC has been renewing all
Technician and Technician Plus licenses as Technician for more than 5
years, and in less than 5 more years there will be no more Technician
Pluses at all, because they will all have either expired or been
renewed as Technicians. In that same time period,
Novices who pass Element 2 get Technician licenses, not Technician
Pluses. And any Technician who passes Element 1 is still shown as
Technician on the database.

- You haven't defined "young" - does it mean hams under age 20? 30? 40?
Does it mean hams licensed less than a year? 5 years? 10 years?

Perhaps you have simply concluded that the code test is the
boogeyman responsible for all problems in the amateur radio service,
and that when it's gone, all will be well.

-

You got that wrong, right off the bat. Ham Radio and the non-ham stuff both have thier good and bad points. That is to say; Both are superior to the other - and inferior to the other at the same time. It is most accurate to just say that they are different.

>
> And, the only way it can is drop the code...

How about hopping on one leg with a paper sack over our heads, squawking like a chicken? - It would have about the same amount of positive effect.

You seem to be really loaded up with ignorant and anti-ham catch-phrases, easy to parrot I suppose. Did you pick up the ignorant attitudes at:

a. TAPR
b. ARRL HSMM group
c. WL2K
d. ARESCOM

... Or is there some other source of utter cluelessness that you have associated yourself with?

Milirary service is not a requirement nor a qualfication for an
FCC-issued amateur radio license.

Military service is not a requirement nor a qualfication for an
FCC-issued amateur radio license.

> The FCC is NOT a regulator of "dreams." All it does is
> mitigate
> interference in the civil side of the EM spectrum by U.S.
> citizens.

There's much more to the regulation of radio than interference
mitigation.

> The FCC is NOT any "moral arbiter" of anything but its own
> regulations and rulings in regards to U.S. law.

That claim is incorrect. The FCC determines "moral", "character"
and "content" standards in all the radio services it regulates.
>

Artistic ability is not a requirement nor a qualfication for an
FCC-issued amateur radio license.

> Sam Morse did that. Sam
> and his financial backer Al Vail invented morse code. ART
> with minor success at it in any media REQUIRES a built-in
> aptitutde for that (or an excellent PR/gallery person to sell
> "great art").

Artistic ability is not a requirement nor a qualfication for an
FCC-issued amateur radio license.

The level of skill in Morse Code required to pass Element 1
is about equal to the artistic skill required to do simple
pencil drawings, not "great art".

> I started out WORKING as an artist-illustrator because I did
> have the built-in talent/aptitude for that.

But you did not succeed at it, did you? You left that career at
an early stage.

Could *you* become an artist-illustrator, traveling from place to
place, painting portraits?

> Not only that, my
> completed works were BETTER in any media than Sam Morse's.

Yet he made a living at it, and you could not. Besides, you are
hardly an independent judge of whose work is "better"...

>
> Ridiculous, specious "comparison."

Not at all. If anything, learning to recognize 41 words of a foreign language requires more learning (depends on the language).
>
> Morse code is simply the arhythmic monotonic tone patterns to
> represent the letters, numbers, and some punctuation in the
> ENGLISH LANGUAGE.

And many other languages - there are code characters for letters and punctuation not used in English. But to pass Element 1, the code characters used are the 26 letters A to Z, the ten numerals 0 through 9, and five punctuation symbols. No umlauts, breves, accent marks, etc.

> It was never intended to be anything else.

That claim is incorrect. Morse Code characters for letters and punctuation not used in English exist. They're just not part of the Element 1 test.
>
> I already KNOW, have used, all without ANY license or "test,"
> MORE than 41 words in each of three foreign languages.

So it should be easy for you to learn Morse Code - if you want to. You don't want to.

> Your "comparison" is preposterous.

Not at all! There's no real difference between learning that "benjo" means "bathroom" and learning that a sound similar to "dahdididit" means the letter "B".
>

> passed by newcomers. Forever.

Let's see:

"incredible stubborn attitude"
"OLD STANDARDS"
"unmitigated gall and arrogance"

Yep - acrimony on your part, Len. Not mine.
>
> The FCC uses "licensing" as a means of EM spectrum
> mitigation,
> NOT to "control the moral/ethical behavior of hobbyist hams."

That claim is incorrect. There's much more to radio regulation than "EM spectrum mitigation" - whatever that phrase is supposed to mean.

For example, a few amateurs convicted of felonies have lost their amateur radio licenses even though they were never accused or convicted of any violations of FCC rules for the amateur radio service.

The content of amateur radio transmissions is regulated by FCC rules. For example, amateurs cannot transmit music except in certain specific circumstances.
>
> The FCC is NOT an academic institution whose "tests" are any

> due primarily to the incredible acrimony of those olde-tyme
> hammes who cannot bear to lose the one link to their personal
> "fame" that set them "up above their fellows" (as hobbyists).

That claim is incorrect.

Element 1 remains a requirement because FCC has not yet decided to remove it. Previous to July, 2003, the provisions of ITU-R treaty section S25.5 required some form of Morse Code testing, and FCC cited that treaty requirement as its basis for Element 1.

Although that treaty requirement was removed almost 2 years ago, FCC has not changed the rules - yet. "Incredible acrimony" does not cause FCC to change its rules, nor to keep them as they are.
>
> Now, N...@aol.com, study hard, devote yourself to the Morse > art
> of painting, but you won't be in anything but small-bore in
> the caliber of Morse art.

How do you know what my painting abilities are, Len? They could be much better than yours...

> APTITUDE lack cannot be overcome by DREAMS.

Aptitude alone accomplishes nothing. Those who succeed are often not those of the greatest aptitude or talent, but those who simply tried, and exerted the necessary effort.

I think you are really bothered by the "Great Equalizer" effect of learning the Morse Code, Len.

Perhaps you were/are one of those folks for whom most things you try come easily, with little effort. The kind of student who can read the book once and get an A on the test - in some subjects, anyway. Big fish in a small pond.

Some people who have that sort of aptitude also become good at avoiding things they don't learn easily. You seem to be that way, Len.

It seems that when you are confronted by something that you don't learn easily, you get angry, frustrated, and abusive. You don't want to accept that others may be better at something than you are, so you attack the something as meaningless or useless. And you attack those who are good at the something you find difficult, rather than exerting a bit more effort.

Yessir that's about right certainly in my case.

> I too was hooked early in life, although it took a long time to finally
> get my ticket. I'm just P****d that I didn't get it years earlier.

Sorry about the previous rant but once in awhile somebody around here
bumps my babble button and there I go again . . You bumped the bloomin'
button again Coslo. Rant Mode = ON

I didn't exactly leap toward the FCC office to take the test either,
far from it. One problem being that I had a number of other interests
too like photography, Boy Scouts, model railroading and GIRLS. They all
absobred my time and what little money I could scrounge via paper
routes and such.

While my folks cheerfully funded Scouting they did not fund any of my
other hot buttons. Probably because they knew I'd drive them broke if
they did. They did encourage my pursuit of ham radio though, I guess
they thought it had educatinal value and it kept me off the streets and
outta trouble. The latter didn't work very well though.

I never had an Elmer, I had no idea how to connect with a ham club when
I was 10-12 so I scrounged books and magazines about ham radio and
tuned the bands with my junk radios. When I finally got to high school
I found a bunch of hams and and "the rest is history". Took me about
five years to go from my encounter with W3EAN to passing the Novice
test and getting on the air with it.

Which was in a much different regime than we have today. The Novice
license was a stick and carrot ticket with the emphasis on the stick.

We had 365 days from the date the license was issued to upgrade to a 13WPM General or get booted out of ham radio. Of the dozens of local Novices I knew I don't recall of any who failed to upgrade or bitched about the code tests.

I think I'm very typical of the kids who got into the hobby back then and there were great heaps of us. The adults who took up ham radio back then were a different story, they had the money and they had control of their lives which us kids did not have. Net result today is that us kids from back then are obviously the grouchy old farts of today and almost universally have disdain to one degree or another for the current state of affairs in the giveaway requirements for licensing.

It's not that we're mentally frozen in time at all, that's 100% BS. It's because we've been there and done it all and we know what works and what does not given the fact that except for the current licensing nonsense ham radio hasn't changed nearly as much as many would try to have us believe. Fuhgeddit, we see right thru it.

Im convinced that events in the future will prove us right. Today we have a "bloat the numbers at any cost" game which is doomed to backfire eventually. The big question is how badly it will backfire and how much damage will have been be done before it happens. The history of this country over last couple decades is chock full of eamples of backing away from failed giveaways. It's only a matter of time until ham radio gets it's turn.

Whew: Got that one out of my system too. Thanks Mike.

> The idea of "recruiting" people into the ARS is likely never going to
> work - at least as far as snagging people that are thinking about a
> hobby, but don't know what to pick up.

I agree right down the line. You can't "recruit" anybody into a hobby unless some kernel of interest already exists in the mind of the "target" and even then it's a dicey proposition in most cases. It's like trying to herd cats, doesn't work. The best we can do is toss out PR to raise the awareness of ham radio and let the chips fall where they might. The League is in the right direction in this respect.

> If you wanna be a Ham - you *know* it.

Yupper but how one gets there varies hugely to the point where all 670,000 of us have probably taken 300,000 different routes. Compare the way Dee got into the hobby vs. my route. How different can they get?!

He's another Burke Dee, a male ditz/troll, he isn't worth the effort,
ignore the goofball.

> Thank you. I work with a number of female engineers, and they seem to
> have no problem working with me. My opinion on the issue is based on
> conversations with them.

I smell an oddity here. Dee is an engineer who apparently works in
academia. You also work in academia and know some number of woman
engineers who are also in academia. I've been out here in the
commercial side for decades and per previous have had very few
encounters with woman engineers. Is it possible that the woman
engineers I don't see out here are operating in academia instead??
Would not surprise me a bit if that's the case.

> Especially one who bristles at being called a
> "female" engineer. She says "Just call me an engineer, if you don't mind!"

Oh crap . . been there, done that . . my middle daughter was an
over-the-edge NOW street warrior in her college days back when the
battle over abortions rights was in full bloom. I can't tell you how
much I enjoyed watching her in action on the six PM news. TWICE.

Of course she had "problems" with this male chauvinist pig. Finally got down to me suggesting that instead of differentiating by the man/woman thing we differtiate by using "X-Chromosone people" and "Y-Chromosone people" instead. Only got me about ten seconds of peace before she recovered and got all over me again.

<sigh>

Funny how the retest letter doesn't say so.

Poor Butt Cornholer of his own kids and grandkids, he sure can't
prove he ever had a "1st Class Commercial license" any more than
he can prove he has a "pilot's license."
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHA HAHAHAHA!!!!!!!!!!

Still flying those model airplanes and think you have a "pilot's
license?" BWHAHAHAHAHAHAHA.

Roger's 2nd class commercial ticket was valid from 1976-1981.
Since he let it expire his grant date of November, 1981 (valid
to the present) on his Restricted Radiotelephone is right there
on the FCC database. (You lose, in other words.) If you'd had a
real 1st class radiotelephone it would've been grandfathered in
the database as a GROL, like so many others were. But no, you
didn't have one to begin with, imaginary "pilot's license" boy.
You couldn't pass a "simple" (in your words)Extra exam today,
and neither could you pass a commercial FCC license exam in
years past. Caught you in yet another lie, kiddie diddler Buzz
Cornholer.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHA HAHAHAHAHAHAHAHAHAHA!!!!!!

> Hey wogie, I would like to come by and see those antennas you
have up.

But we all know you are too much of a chickenshit coward to do
so.

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!

Kelly:

Yep. I think you are unaware that some of us out here have our licenses, got our radios fired up, tune the bands--and it is nothing but the same old, same old...

We do see all the rag chews, boring rants, same operators, same gripes, same rants, same little groups, same ideas, same conversations as yesterday--day, after day, after day...

I am sure a lot of 'em are sitting there waiting for us poor ignorant ops to "get with it" and "come to the realization" of just how vital and interesting this all is and SHOULD BE to us...

Well I am one which does not and cannot appreciate it... if the fault lies with me and my interests and views--so be it...

If I am wrong and all these young guys just can't wait to get a license and startup a QSO so they hear these old guys fart and rant--well, that is just a short coming of mine--and, those young dynamic guys who are running the world right now and providing new ideas, designs and methods are probably on the way here right now to find the old farts.... I'll just sit here and wait for 'em, I need a change... maybe I can chat with one or two of 'em--if they can quit their hero worship of you guys long enough... <grin>

That claim is incorrect.

But it reveals something about its writer.

Some people still believe the idea that intelligence can be
meaningfully measured/expressed as a single numeric quantity.
As if IQ scores told all.

The fact of the matter is that there are a number of different
types of intelligence - at least seven different, distinct
kinds have been identified. A person can be a genius in one
intelligence area and barely functional in another.

The phrase "are too stupid for the technical fields" reveals
that its author still believes the single-quantity concept.

>

> Would not surprise me a bit if that's the case.

Here's what I've observed:

1) Most technical fields have been predominatly male for a whole bunch
of reasons. That's changing but it takes a long time, because you don't
become a senior engineer overnight.

2) "Technical field" covers a lot of ground. Medical technology - is
that
technical or medical?

3) The factors involving career choice are many and varied. Just one
example:

Back in the
1970s, when I was in high school, a lot of girls I knew who would have
excelled in the technical fields were essentially dequalified by the
schools they went to. The boys' high schools offered lots of math and
science courses at all levels, while the girls' high schools did not,
focusing more on languages, social studies, and related fields. The
division was subtle but effective - very few girls from those schools
went into technical fields in college, while lots of boys did.

> > Especially one who bristles at being called a
> > "female" engineer. She says "Just call me an engineer, if you don't mind!"

Works for me.

Yeah, like me! Ancient IBM mainframes that took up an entire room in
the late '70s. First personal size computer was the venerable Trash-80
with a tape drive around 1981. First computer hooked to a modem was a
C-64 a few years later. Got a number of the Commodore Amigas. Had a
A500, an A2000,A3000, and an A4000. Got the Macs starting with a II-CX,
then to a 7100, 7500, G3, G4, and now a G5. PC's from the 286, 386 PS2,
Several laptops, and some HP Pavilions at home.

I've been around computers a while, despite diatribes to the contrary .

N2EY:

Apparently you don't understand IQ scores...

IQ is measured by you ability to extrapolate off common knowledge and use the products of such to solve new solutions which the "test'ee" is unfamiliar with... it is the ability of the mind to adapt to new situations, new conditions, new ideas and come up with new solutions...

It is also pattern recognition...

It is NOT a "religious beliefs" in existing knowledge, it is NOT upholding traditions and methods for historical reasons...

One thing it is NOT is wrote learning... a chimpanzee can do that...

Warmest regards,
John

I worked for Microdyne for four years as a production tech and as an engineering tech. My last project was their RCB-2000 and DR-2000 series receivers. The RCB was a dual receiver with a combiner, while the DR was just a single receiver in the same case. Both had the same features and user interfaces. they ran on embedded NT and had 10/100 MHz Ethernet interfaces for complete remote control, or to store different configurations.

I'm still near Ocala, but I'm now 100% disabled and can only spend a few hours at a time in my shop here at home. Ocala is a nice area, but three of the hurricanes did a lot of damage here last year. The "Florida Greenbelt" runs across the back and one side of my property. It was so heavily wooded that you couldn't see any light between the trees. Now, there are more gaps than trees. Big pines were snapping about half way up and hitting the ground. They moaned and groaned for hours in the high winds, till they started snapping.

In our club, the largest radio club in the state if not in the
Pacific Northwest, about 1/3 of the hams are women, and of them,
about half are active on the air in some fashion or other.

I don't know. I'll have to ask our friend Jane who owns and flys
her own air taxi service....

>Ever go to a quilting meeting? How many men did you see there?

Quilting, I have no idea. I do know that our friend Paul is one of
the better local crochet artists - he does specialty work such as
Jewish skullcaps with intricate designs and teaches same at local
congregations.

>Ever go to an antique radio swap meet? You will find a lot more men
>collecting and fixing old radios than women.

One of the more prominent collectors and restorers of WW-II-era
military radios is a woman - who is also the communications chief
for one of the major California cities.

>Do you collect dolls, tea sets, china dishes? No? Lots of women do.

As do most of the dealers in that field, who are overwhelmingly male.

Phil:

My gawd, the bands are crawling with them, there must be heavy congestion somewhere with 'em all trying to communicate... I think my radio has stopped working--can't find a one--heck, perhaps some chauvinist engineer designed this piece of junk and it would pass female voices though the audio stages--SOMETHING IS WRONG!!!

That's right. And within the confines of the testing areas and methods,
the results are fairly accurate. But IQ is not the entire picture.

My point is that intelligence goes far beyond what is measured by IQ
scores. Intelligence is a vector with many variables, not a scalar.
>
> It is NOT a "religious beliefs"

belief

> in existing knowledge, it is NOT
> upholding traditions and methods for historical reasons...

It is also not changing things merely for the sake of change. It is
not a blind acceptance of "newer is better" or "ending is better
than mending". It is not a wholesale rejection of past experience
and wisdom simply because of age.
>
> One thing it is NOT is wrote

rote

> learning...

Yes, it is. The ability to learn and recall facts is part of
intelligence.
Not the whole thing, obviously, but an important part.

Then there's the role of skills, which are often undervalued but which
are a vital part of intelligence as well.

> a chimpanzee can do that...

Some insects can do pattern recognition.

--

I sense a certain level of IQ chauvinism in your reply. Looks like
you consider only certain kinds of mental processes to be worthwhile,
and the others don't count for much with you.

That's a very shortsighted view of things, John.

--

I find it interesting that you do not reply to direct questions,
and that you insist on top-posting in a newsgroup where
everyone else inserts their comments into the post they are
responding to.

Is there a reason for those behaviors?

N2EY:

I have noticed one thing, people who "DON'T have what it takes" always "try to make it something else."

Either you have it or you don't, and industry will find out, one way or another...

... one more thing, people who don't have what it takes are always more than willing to fall into an argument of just what it takes--the rest which have what it takes usually have completed the job by then...

3113. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-16 21:30:48 UTC
From: N2EY@AOL.COM
Message-ID: <1118957448.062694.238450@g43g2000cwa.googlegroups.com>
Source record: 110344

These are the numbers of current, unexpired amateur licenses held
by individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of June 15, 2005:

Novice - 28,271 (decrease of 21,058)
Technician - 269,048 (increase of 63,654)
Technician Plus - 48,743 (decrease of 80,117)
General - 136,560 (increase of 23,883)
Advanced - 76,000 (decrease of 23,782)
Extra - 106,793 (increase of 28,043)

Total Tech/TechPlus - 317,891 (decrease of 16,363)

Total all classes - 665,415 (decrease of 9,377)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

Note also that effective April 15, 2000, new Novice, Technician Plus or
Advanced licenses are no longer issued, and that all existing
Technician Plus licenses are being renewed as Technician.

Actually I'm *hopeful*, John. I simply don't agree with you
about some things that you take for granted as facts.

You really don't seem to be open to change...

> you don't see a problem... you are fine with the numbers...

Those claims are incorrect. I do see a problem with declining
numbers of US hams. I just don't blindly accept your one-step
solution, that's all.

> I don't think you give a
> damn if we ever get enough young hams in here to make it interesting...

That claim is incorrect in at least two ways.

First off, I would like to see more hams - of all ages, and from all
walks of life. But not at the cost of trashing the amateur radio
service in the blind pursuit of numbers.

Second, I think hams of all ages can be "interesting". I don't have an
age bias against young or old, male or female.

> frankly I just don't think you give a damn about anything but status
> quo...

That claim is incorrect also.

> you have convinced me you are stone set in your ways and think
> everything is fine... go for it... we will see as time passes...

We have seen that reducing the license test requirements in 2000
led to a short-term peak in the number of US hams, followed by a
decline
to levels lower than before the restructuring.

But we're only talking a few percent.

> the bands are boring

To you. Not to everyone. Perhaps you could tell us how to
make them more interesting?

>and that is the way you like 'em--

That claim is incorrect.

I have interesting QSOs every time I'm on the ham bands. Of course
I'm rarely using 'phone - I'm usually on Morse Code (CW). Last night 40
meters was full of Morse Code signals from 7000 to 7060 or so. Some
interesting conversations. I fired up my Elecraft K2 at the 5 watt
level
and had a nice chat with a ham in Indiana.

> have at it... I got
> the internet to chat on while I wait...

To each his own.

We know you did, kiddie raper Corey.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!
!!!!!!!!

There is no proof Roger had to retest because of interference.
And those ARRL news releases you like to cite as "proof" isn't
proof, dumbfucking kiddie diddler Corey.

But the letter is proof that the FCC can make somebody retest if
they initially tested before a VE.
Good thing for you that you took your Conditional and obsolete
Advanced before an FCC examiner, you wouldn't be in ham radio
today if you had to retest.
From his "letter" as posted by you on numerous occasions to
rec.radio.amateur.misc:

Dear Mr. Wiseman:

Pursuant to Section 97.519(d)(2) of the Commission’s
Rules, 47 C.F.R. Section 97.519(d)(2), the Commission has the
authority to re-administer any examination element previously
administered by Volunteer Examiners (VE’s). The Commission
may either administer the examination itself, or under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE
designated by the Commission.

Accordingly, we are requiring you to re-take the General Class
Amateur Examination, (Elements 2, 3(A) and 3(B)) under the
supervision of an American Radio Relay League Volunteer Examiner
Coordinator. This examination must be completed on or before
September 11, 2000. The required code speed that you must
demonstrate is 5 words per minute.

> or because it was something very different?

Yes I needed to know what it was all about before developing an interest in radio for it's own sake. The Novice/Tech class I took along with my husband at the time filled that role.

Once I had some basic knowledge about ham radio, I was attracted by the fact that it was NOT like the internet. What attracted me was that I could talk around the world with NO INFRASTRUCTURE. That communications was totally dependent on me and my skills and my knowledge of propagation once I had the basic radio and antenna. Here I, just an average citizen, could put a radio signal around the world and even beyond if I wanted to pursue it.

If it had been like the internet, I'd probably have lost interest.

Dee D. Flint, N8UZE

Actually about equal to drawing the stick figures that children create.

The American Red Cross and County EMA agencies have funded equipment
upgrades in the past. Do you think they'll stop if we get more bands?

> And does propagation varies that much between most of the bands we have
> now? I don't think so.

Then what was your purpose in putting up such a strawman?

And all agencies that rely upon HF communications would be pleased as
punch to have bands that are separated by 5 megs?

> It was argued that the difference in propagation between 80 and 40
> could be great enough that access to a band near 60 was needed.

Lots of questions.

Before you start in on your "what if's," what is your intended purpose?

Purpose should direct repsonse.

> > > Trap dipoles don't have to be on bands that are harmonically > > related.
>

Cushcraft handles it nicely by having a trapped antenna for the
20/15/10 meter bands, and another for the 17/12 meter bands. I think
each antenna has an optional trap for 40 and 30M.

The random wire antenna you suggested is doable, and the low dipole is
a good NVIS performer.

Fine. Why do we need any of those bands? State your purpose and we'll
consider suitability.

Usually radiates via the mic/key cable.

The "bloat the numbers at any cost" will backfire for the simple reason that
too many with no real interest will get in and then drop out. Then we will
see once again a decline in numbers that will panic people just as the
relatively small drop off from the peak is panicing people now.

I work out in the trenches of the automotive industry and stated that I did NOT see very many female engineers but that I see more female hams than female engineers.

My folks didn't fund anything in the way of "optional interests" - if
we kids were interested, we could figure out how to fund the activity,
and/or do it
on the cheap. Which some of us proceeded to turn into an art form.

> I never had an Elmer, I had no idea how to connect with a ham club when

> test and getting on the air with it.

Similar story at my end, except my Elmers were books. I was 90% of the
way to
a Novice when I finally got up the gumption to approach a local ham,
who I located by his antennas.

Now there's a bit of publicity that is being lost in ham radio today.
Time
was, everybody knew where the hams in the neighborhood lived, because
you
couldn't mistake the antennas for anything else.

> Which was in a much different regime than we have today. The Novice
> license was a stick and carrot ticket with the emphasis on the stick.
> We had 365 days from the date the license was issued to upgrade to a
> 13WPM General or get booted out of ham radio.

Or you could get a Technician ticket - but that had no HF and the
written
was the same as General.

> Of the dozens of local
> Novices I knew I don't recall of any who failed to upgrade or bitched
> about the code tests.

Me neither. In my time the Novice was 2 years but the same one-shot
no renewal no second chance ticket.

Biggest cause of dropouts in those days was lack of gear.

> I think I'm very typical of the kids who got into the hobby back then
> and there were great heaps of us. The adults who took up ham radio back

The newcomers didn't make the rules, so I see no point in being ticked
off at *them*.
>
> It's not that we're mentally frozen in time at all, that's 100% BS.

Yep.

> It's because we've been there and done it all and we know what works
> and what does not given the fact that except for the current licensing
> nonsense ham radio hasn't changed nearly as much as many would try to
> have us believe. Fuhgeddit, we see right thru it.

Heck, take a look at the "Rotten Radio" stories by T.O.M. With a few
changes for the techological differences the same stories apply today.

> Im convinced that events in the future will prove us right. Today we
> have a "bloat the numbers at any cost" game which is doomed to backfire

> gets it's turn.

We're seeing it already. The restructuring of 2000 reduced both the
code
and written test requirements. Net result was a short-term peak in
numbers followed by a drop to below where we were in 2000 or even 1997.

Maybe FCC sees that - they could have dropped Element 1 back in 2003,
or any
time since, but they haven't seen fit to do so.

> Whew: Got that one out of my system too. Thanks Mike.

The blapster (MAN) has been trying for decades to drag the FCC into Federal
Court. He probably did all of that with that goal in mind.

I don't and never have thought Glen to be stupid. Just crazy.

I work with 5 or so regularly.

I think you are probably correct regarding their increased presence in
academia, compared to industry.

My thoughts on why that is so are based on two ideas. First is that the
academic world is sensitive to gender issues, due to groups that bust on
them if they are not. This leads to the second reason. That is that
until there are a lot more women graduating in the engineering fields,
the academic world will scap them up pretty quickly.

Some have noted that women tend to think differently than men, and may
not want to go into the engineering fields as a result of that
difference. (note that this is as a trend- not as the circumstances
regarding any one woman) I am not sure if the differences are
instinctual, or culture based. Time will tell. And it will probably be
quite a long time.

Yoiks!

In fairness to the particular engineer, she is not particularly
obnoxious. Mostly just wants to get her work done.

That IS a significant number, Phil.

Dee:

You miss a very important reality.

If the youngsters are not introduced to amateur radio--then most of those interested in RF uses will go the Ghz freqs of lans/wans and setup various neighborhood or city/town/county computer communication networks, and when they look back at amateur radio and the code requirement--they will laugh and become freebanders!!!

Much better to get 'em started right up front--although the oldsters here act like radio is a big thing, the kids don't think so--they have been chatting the world for a big percentage of their lifetimes on the internet... they don't have to wait for conditions to improve, they don't have to buy expensive equipment or set up large antennas or run linears--they chat 24/7 with total and complete reliability...

they don't have to find someone with a license to chat with, anyone able to obtain a computer they can and do chat with... there are NO BARRIERS, compare that to amateur radio...

... then there is the data throughput capabilities of the net which the narrow rf spectrum amateur radio provides will never allow for...

The lack of them here proves there is some REAL problem, and that is what I have been saying--AMATEUR RADIO WILL HAVE TO CHANGE AND COME OUT OF THE PAST AND JOIN THE NEW TECHNOLOGIES WITH DYNAMIC MINDS TO MEET THESE CHALLENGES OR DIE...

... one or the other is inevitable, surely a blind person can see that... I would think you might be free of the DINOSAUR SIZED EGOS of the males here and able to grasp this immediately...

I have to note that in an earlier post where you disagreed with me
about a person "knowing" they wanted to be a ham, after reading this, I
have to agree that the things that I most enjoy now are nothing like
what I thought I wanted to do when first becoming a ham.

Which of course is a powerful argument for keeping the Morse code test.

Although I use the Internet a lot (probably waay too much) I love Ham
radio precisely because it ISN'T the Internet.

DIfferent strokes for different folks, John. Internet Relay Chat is for
some of us just about the *least* interesting facet of the Internet.

Tried it and didn't like it. The magic of ham radio is that you don't need
an infrastructure such as the internet.

Not interested in internet chat. Tried it and it's dull. Too much
infrastructure and not enough independence to make it a fun hobby.

"Radio for its own sake" - that's the key to amateur radio. If
someone is turned on by that, they may want to be a ham. If not,
it's highly doubtful.

>I have to note that in an earlier post where you disagreed
>with me

Exactly.

When I first got started with a shortwave receiver (homemade),
I was attracted to ham radio by the folks on 75 meter AM. I
wanted to join them, so I set about getting a license.

In those days, that meant at least a General Class license,
so I set about learning the code and theory, and setting up
a station. Got the Novice at age 13 in 1967 and went on the
air with Morse Code.

Now originally the plan was to use Morse Code on the air until
I could get the General. But a funny thing happened on the way -
I discovered how much fun Morse Code was, and how much could be
done with very simple equipment using Morse Code. And it became my
favorite mode.

That's the hook for me, too. Plus doing it with equipment I
designed and built myself.

Same here.

The big difference is that the 'net is a means to an end. Ham radio is
an end in itself.

N2EY:

When there was some mystery to radio, perhaps, no longer... most even listen to shortwave on the internet...

Check out radio australia, BBC, etc. webpages... they even make note of it... and you can get their broadcasts though your computer with audio quality which is remarkable...

No, we are just watching the end of an era, like the horse and buggy... no one stuck in the past can ever see the future coming, and they all end up dreaming of halting progress... even from their rest homes...

If you stay active with the youngsters and an important part of your community activities it is much easier to accept change and have the skills to adapt...

... staying current is a real chore, popping into a college now and grabbing a course to stay current is beyond what some can will or want...

Many are just too old to be able to incorporate the computer into their lives, the current generation can't live without them--but then, neither can I and I consider myself an old fart...

So what do you want them to talk about? I thought hams could converse
about whatever pleases them. I don't see anything in the FCC regulations
that says hams can only talk about this and can't talk about that. Do you?
>

If you aren't interested no one is holding a gun to your head to make
you listen. Have enough sense to either change to another frequency/band
or turn the damn radio off and find something else to do.

Sure sounds like ham radio isn't for you. Maybe you should go back to cb
and the 'freeband'.

I listened to the 40 meter cw band last night and also found it full of Morse signals, but johnnyboy says that can't be so as cw is dying out, no one is interested in using Morse code anymore, so we must obviously have something wrong with our receivers. If you find the problem let me know so I can fix mine too.

Tsk. Jimmie sounds all upset. Nobody is telling him any "orders."

Not to worry. Those who've never served in the military won't
get bothered about taking orders.

However, "radio manufacturers" very much need to take orders. As
many as they can handle! :-)

Jimmie said he was a "radio manufacturer." Better give him an
order right now, keep him solvent. [or was that "soylent...?"]

>> Some of us were using computers back in the punchcard and paper-tape

23 or 40 channels is "few?" In an urban area of 10 million+,
yes, too few. :-)

But, "5 watts of power" can WORK THE WORLD!!! :-)

Only 5 Watts of RF output? Nay, see the General Radiotelephone
CB manufactured by the thousands here in beautiful uptown
Burbank. 35 Watts out with the "modification" clearly spelled
out in the instruction manual! :-)

>> The way many cb radios were used was in clear violation of the
>> Communications Act and FCC regulations.

Riiiiight you are Mr. Noblestoneofall...all CBers are dastard
souless lawbreakers and should all be taken out and shot.

All the righteous, noble, "federally authorized" hams deserve
a lifetime of respect and admiration for being scrupulously
honest with everything!

> My experience has been that it must be a small "somewhat" indeed!
>
> Is there some rule that "real electronikers" can't use reference material?

With ham radio among the mighty macho morsemen, ALL you need is
morsemanship. That's enough.

"Morse gets through when everything else will..." B. Burke, 2004

> Real technicians don't look up pinouts either! ;^)

Oh? You "KNOW" every single tube, transistor, IC pinout by heart?

If you do, you're ten kinds of dumshit braggart, Michael.

> What sort of antennas do *you* have, Len?

Two. But the number of covenants against them are only one and
that one was issued by the FAA. :-)

>> How many children have you parented, Len?

Ah! The Master Pediatrician accuses! :-)

Last time I looked, NO ONE in ANY discipline of electronics was
required to be a parent in order to work in that field! :-)

Would you accept an MD's signed test paper on sperm count? :-)

HOW MANY CHILDREN AS JIMMIE MICCOLIS "PARENTED?"

So far, we've not heard any answer in public...and are not likely
to. Jimmie wishes to be dominatrix here?

> This NG is about amateur radio, Len. Something you are not a part of.

This newsgroup is about AMATEUR RADIO POLICY, Jimmie, NOT pediatrics
or How To Raise Kids. So far, we have to assume YOU ARE NOT A
PART OF THAT.

> So you're old, Len. Big deal. You grunt and grumble, rant and rave more

This topic is getting interesting, I'd like to take it a bit further.
I'm at a complete loss to understand why there's such an obvious
disparity in the numbers of woman hams & engineers in this part of the
country vs. in your part of the country.

With respect to the socioeconomicpolitical mindsets Oregon is well
known for marching to it's own occasionally quirky liberal drummer
while PA is a typical old-form mid-Atlantic centrist sort of place. I
'spose there are some of the usual left coast / right coast differences
which sort of favor left coast women and might explain part of it. But
good grief, we're not talking Albania and Sweden here.

I've mulled the matter off and on for a few hours and it occurs to me
that maybe, just maybe our exposures to women engineers in particular
have been quite different. As in where you've churned your coin vs.
where I've gotten mine over the years. I've only spent a total of ten
years working for large entities, six as a Navy employee back when
woman engineers simply didn't exist for all practical purposes, then
much later I did four with the DuPont central engineering center in the
mid-1980s. Three of the four woman engineers I've met and cited were
DuPont employees, the fourth was a short-time part timer I ran into on
a specific small-biz project whose real job was with some large firm or
another.

Except for the six I did with the Navy, a gig I loved and was enormous fun I've spent most of the rest of my career in smokestack small-medium size busineses. I have allergic reactions to huge employers for a number of reasons and generally avoid them. I despise corporate beige with a purple passion

If I have it right you spent most of your career with the FCC, another huge entity. Is it possible that women in engineering tend to gravitate in large numbers to major entities where fair employment practices are actually practiced and you've gotten involved with more of them than I've ever managed to meet?

Ever DESIGN and BUILD an HF amateur radio transceiver, Len? Not from
someone else's plans, but from your own design?

Didn't think so.
>
> Remember: You can't say "first personal" in here.

What's wrong with "name"?

Compared to the frequencies any radio amateur can use, it's
very few.

> In an urban area of 10 million+,
> yes, too few. :-)

Too many, given how they were and are used...

> But, "5 watts of power" can WORK THE WORLD!!! :-)

On the right frequencies, with the right mode and a skilled
operator. You wouldn't know about any of that, Len.

> Only 5 Watts of RF output?

No. Input.

> Nay, see the General Radiotelephone
> CB manufactured by the thousands here in beautiful uptown
> Burbank.

Did you work there, Len?

> 35 Watts out with the "modification" clearly spelled
> out in the instruction manual! :-)

Seems like you endorse that sort of thing. Says volumes about
your character, Len.

> >> The way many cb radios were used was in clear violation of
> >> the Communications Act and FCC regulations.
>
> Riiiiight you are Mr. Noblestoneofall...

Who?

> all CBers are dastard
> souless lawbreakers and should all be taken out and shot.

No, they should just follow the rules.

Using radio to avoid compliance with the law (such as speed
limits) is a violation of the Communications Act.

Failure to properly identify is a violation of FCC rules.

Modification of equipment to unauthorized levels of power
is a violation of FCC rules.

> All the righteous, noble, "federally authorized" hams deserve
> a lifetime of respect and admiration for being scrupulously
> honest with everything!

Would you rather that hams followed Part 97 the way cb users follow
Part 95?

How many, Len?

> Last time I looked, NO ONE in ANY discipline of electronics > was
> required to be a parent in order to work in that field! :-)

But *you* have asked FCC to exclude everyone under the age
of 14 years from any class of amateur radio license. Without
any example of problems caused by the licensing of young

people as radio amateurs.

So it's relevant to ask what experience you have as a parent.
It's clear you have none, and are trying to divert attention
from that fact.
>
> Would you accept an MD's signed test paper on sperm count? :-)

There's much more to parenting than biology, Len. But you
wouldn't know that.
>
> HOW MANY CHILDREN AS JIMMIE MICCOLIS "PARENTED?"

"You cannot answer a question with another question" - Len Anderson

It's not about me, Len. I'm not the one asked FCC to exclude everyone
under the age of 14 years from any class of amateur radio license,
without *any* example of problems caused by the licensing of young
people as radio amateurs. *You* are.

> So far, we've not heard any answer in public...

Not from you.

> and are not likely to.

It's not about me. I'm not the one asked FCC to exclude everyone under
the age of 14 years from any class of amateur radio license, without
any example of problems caused by the licensing of young people as
radio amateurs. *You* are.

Besides, what level of parenting would you respect? From
your behavior here, it's clear it wouldn't matter how
many children I'd parented or what they accomplished. You'd
find a way to make fun of them. It's what you do - we've
seen it plenty of times.

> > This NG is about amateur radio, Len. Something you are not a > > part of.
>
> This newsgroup is about AMATEUR RADIO POLICY, Jimmie, NOT
> pediatrics or How To Raise Kids.

You have asked FCC to exclude everyone under the age of 14 years from
any class of amateur radio license, without *any* example of problems
caused by the licensing of young people as radio amateurs. Yet you have
no apparent experience as a parent. Tsk.

> > So you're old, Len. Big deal. You grunt and grumble,
> > rant and rave more than anyone here.
>
> No, I don't. :-)

Maybe John Smith does more these past few days...

Maybe you and he are one and the same.

>
> >>>> If we can celebrate those who *DO* things instead of simply consume

The "professional experts" thought those frequencies were
useless - that's why amateurs got them.
>
> >> You mean like the person who posts their military and work experience

Remember though, that there is no rule that disallows enjoyment of heritage technology *and* more recent technology. (I hesitate to call things like the internet, and digital modes as cutting edge - they are not)

I spend a lot of my hobby time doing psk31, using antenna design programs, and I am starting to fool around with tube equipment as a lark too. It's all good, man! 8^)

Seems Lennieboy scoffs at those who go by the rules, that speaks volumns about him I would say. Seems he is jealous since hams are 'federally authorized' to use the ham bands and he can't become a member of the fraternity.

> It's not about me, Len. I'm not the one asked FCC to exclude everyone

Just about any 14 year old or younger would make a better ham than Lennieboy. Many already have, but poor Lennieboy can't make the grade. That is why he doesn't want 14 year olds getting a license, it makes him look bad.

Missouri? Poor stupid, ignorant two-test wogie, doesn't even know which state I live in. Never lived in Missouri two-test, you lose again, but then what's new?

>
> Hey dumbfuck, I sure did make you dance though, bitch boy.

Yea, I really dance you idiot. You were so dumb you thought a Conditional was taken before an FCC examiner, now that you have been corrected you dance yourself. What a moron!!!

> You
> lived so far out you did have a Conditional license before you
> took your obsolete Advanced before an FCC examiner.

Only had to live 250 airline miles from the nearest FCC office to qualify to take the Conditional. Lots of places were 'so far out'.

Poor two-test stinky fatboy wogie, had to retest to keep his ham license. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAHA!!!!!!

I heard you ex-wife said you wet the bed, especially when you were drunk, which must be all the time. Is that true wogie?

I still want to know about these special antennas you have that give negative SWR wogie. I sure would like to have and antenna that puts out more power than you put into it. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!

Bet you did a good job of malicious interference on 20 meters with that antenna. Good enough that you got caught and had to retest to keep your license.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!

Michael:

Exactly... nothing is a "whole world onto itself."

There are just different points of views and interests/goals. How one discusses the subjects eventually draws a picture of the authors minds--some have only self-serving interests and goals in mind and are not interested in anything else--some are willing to look at the bigger picture, plan for the future and try to encompass everyone in the future plans and goals...

Hey, it is a free country...

Most colleges make Chem class 3 credits but Chem Lab 1 credit,
and some others just lump the two together for 4 credits.
and the grades are usually weighed so labs rate for about 25%
of the final grade.

Similar things happen with Calculus class, I learned how
to solve exam problems but never did figure out how to
actually USE calculus to solve a real world problem.

In undergraduate college, if it doesn't show on the tests,
there's no point in learning it (unless you find something
interesting on its own).

Certainly women think differently than men and it's good thing they do
in several respects. As far as the timing of the emergence of large
numbers of woman engineers goes. Hell, I know scads of women
contemporaries of mine whose parents never gave them a chance to go
into higher education "because the woman's place is in the home
barefoot, pregnant and in the kitchen". Never mind support their
daughters desires to become engineers. Society has come a long way
since those days but it's gonna take a few more generations before this
thinking actually prevails.

The Tech ticket was next to useless in the mid-'50s because VHF/UHF ham
radio didn't exist for all practical purposes. There were a few far-end
experimenters on the air and a few hams using some commercial gear on
6M and some using WW2 surplus gear on 2M like the SCR-522 TX. Novices
had acess to 2M phone but Techs were restricted to freqs above 220Mhz.
It was a really scewball situation. The result was that probably 98% of
the Techs were Novices who took the test for the General and passed the
writtens but flunked the 13WPM code test.

I didn't see much of that. The norm then was to have a station already
up and running before one went for the test. The 365 day window of
opportunity was tough and wasting time by not being ready to roll when
the ticket arrived was not a good idea.

QRZ.com doesn't show an e-mail address for him. On the other hand that
info could be 'way out of date. I wouldn't mess with snail mail, he's a
local, I'd look up his phone number and call him then take it from
there. All he should need is the hard-copy renewal package which you
can order for him via e-mail or phone.

> their heroic opinions. [we all know who they are...:-)]

We surely do. One's given name is Leonard. We've heard his military and commercial radio stories, unrelated to amateur radio, countless times. See what happens when you think tangentially? Not only do you come to believe that you are the center of the "newsgrop world", you come to believe that you have something to do with amateur radio.

Let's see if we have your thinking down, Leonard. Someone who doesn't
volunteer for military service, especially in time of peace, isn't a
patriot? Is that what you're saying?

You have incredible acrimony over the issue of morse testing, yet the
test remains. Go figure.

Yeah, some of 'em can't even make change without an electronic cash register. Many of them read below the high school level. They have little in the way of cultural literacy. Most are woefully inadequate in geography. They're all sharp.

Hello, Dave

Yep, I'm only on 10 and 440. On 10 meters, I use SSB (one FM contact) as the thing has no provision for CW. On 440 I stay on FM. One guy was really talking up the need for CW so I did, with the repeater owner's permission, change to MCW. 40 words per. No problem. :)

That claim is not necessarily correct. Maybe Len could, maybe he
couldn't. All we know for sure is that he hasn't. (If he had,
we'd never hear the end of it).

> >> All the righteous, noble, "federally authorized"

> Seems Lennieboy scoffs at those who go by the rules, that
> speaks volumns about him I would say.

He does seem to have trouble with certain radio regulations.
For example, there was a long series of diatribes from Len
about how ITU-R wasn't really a "treaty". Len also claimed
that all hams could legally operate with licenses that were expired but
in the grace period. Wrong, of course. He's also
claimed that Novices and Advanceds will have to retest to
retain their privileges - also wrong, their licenses can be
renewed and modified indefinitely; FCC just isn't issuing new
licenses of those classes.

Len will go on and on about how awful ham radio, and many hams,
are - accorcding to him. But you will never see a single
negative word from him about cb radio. Not one. You'd think
cb was an absolute paragon of rules compliance and a model
of an orderly radio service, if Len was your source of info.

> Seems he is jealous since hams are 'federally
> authorized' to use the ham bands

Sure seems that way!

> and he can't become a member of the fraternity.

Why not? He can get a license just like anyone else. All
it takes is passing the required tests. Heck, the
Technician has not required a code test for 14+ years, and
5 years ago its written test requirements were cut almost
in half. And it gives all amateur radio operating privileges
above 50 MHz.

> > It's not about me, Len. I'm not the one asked FCC to exclude > > everyone

Maybe. It sure does seem to burn Len's toast that some of us were
hams before age 14.

Actually there are a few limitations. Hams are not
allowed to use amateur radio to discuss:

- Anything of "pecuniary interest", meaning something that
would result in a monetary profit for those in the discussion.
(K1MAN got into hot water
with that recently - he kept mentioning his website and
stuff that could be bought there.)

- Anything that could aid in the violation of local, state, or
federal laws. (Discussing ways to jumper your electric meter
in order to reduce your bill, for example, is prohibited.)

- Anything that meets FCC's legal definition of obscenity.

I don't recall any other subjects that hams aren't allowed to
discuss on the ham bands.

I think you're missing an important point, Buzz.

John is complaining about the content of what he hears on
the ham bands (actually the 'phone subbands) but doesn't tell
us what *he* would find interesting to talk about. Nor does
he seem to be setting an example.

> No Code International was found for the express purpose of
> ELIMINATING the morse code test. Why should they "change"
> and do like you wish them to do?

Because it would show that they are "progressive" and
"open to change", rather than stuck in the past. We are
told that "change is inevitable" so why should NCI
fight change the way they do? Why should they insist on
un-moving devotion to their "principles" and the staunch
"unwillingness" to change on the point of code
testing?

> >> However, the ARRL with un-moving devotion to

Why can't you just call me "Jim" or "N2EY", Len?

> The ARRL is about as
> hidebound to the status quo as is possible for the olde-tyme
> league leaders to be and still be human.

How so?

In 1998, *before* FCC released an NPRM, ARRL formally proposed
reducing the
number of amateur radio license classes in the USA from 6 to 4,
proposed reducing the code testing requirements for General and
Extra class licenses, proposed free upgrades for two license classes,
and proposed better written testing.

ARRL also proposed that Technician class amateurs be allowed to
use some HF bands *without having passed a Morse Code test*.

ARRL has recently formally proposed another round of changes,
including elimination of the code test for all but Extra class
licenses.

Hardly "hidebound to the status quo"!

Your claim is incorrect.

> That is abundantly
> clear in their publications, periodicals, and whatnot output > in at least the last half
century!

How?

Way back in the late 1940s and early 1950s, ARRL was fully
behind amateurs getting on SSB. There were numerous articles
in QST promoting the mode, SSB construction projects in various
ARRL publications, and even a column in QST "On The Air with
Single Sideband". Some hams even complained to the editor that
ARRL was "forcing SSB down our throats".

Hardly "hidebound to the status quo"

Plenty of other examples all through the past half century.
VHF, UHF, SSTV, repeaters, satellites, AMTOR, packet, EME,
and much more are the subject of both the general ARRL
publications and specialized books.

The June 2005 issue of QST has a two page article on EME
with JT65. You probably don't even know what JT65 is, Len.

>The league WILL support the law as it is written.

What would you have them do - break the law?

> It must. That
> is PC. Beyond that, the league sits on their
> collective olde-tyme
> duffs, trying to keep the status at the quo of the core
> membership.

> the Believers.

Those claims are completely incorrect.

> >The ARRL has been pushing for a revision of the rules to

"You cannot answer a question with another question" - Len Anderson

> What has the mighty league DONE in all its "pushing" since > 1979?
> It couldn't defeat Access BPL.

So? Neither could you. Nor any of the many others, amateurs and
professionals, who tried.

You probably wouldn't even know what BPL was if not for ARRL's
publicity efforts.

> It couldn't get a whole band at 60 m.

There would be no amateur access to 60 meters at all without
ARRL. And the only reason a band was not authorized was that
NTIA drastically changed their policy after September 11, 2001.

> It couldn't stop the IARU (and NCI) led REVISION of S25
> at WRC-03.

ARRL did not try to! Back in early 2001, the ARRL BoD changed
policy, and decided not to oppose changing S25.5. That was
more than two years before WRC-2003.

> It couldn't stop the FCC restructuring ELIMONATION
> of 13 and 20 WPM morse code test rates.

"ELIMONATION"?

Actually, ARRL proposed the removal of the 20 wpm code
test and the reduction of the General class code test
to 5 wpm. *Before* FCC released that NPRM!

> It couldn't stop the
> FCC in cutting the number of new amateur radio license
> classes in HALF.

Actually, ARRL proposed the reduction of license
classes from 6 to 4 *before* FCC released that NPRM!

> CHANGE is happening but the league has become impotent
> and represents only the olde-tyme, settled-in-their-ways core
> membership.

That claim is simply incorrect.

> For a quarter of a century the ARRL had done

> revolution?"

It's not up to me, Len. We've been told many times that dropping
the code test would bring in a lot of "technical people" who
would "revolutionize amateur radio". Hasn't happened.

> Poor Believer. 2 out of 5 U.S. radio amateurs are Technician
> Class licensees and they don't worship morsemanship!

So what?

> It must be
> a virtual hell for the arrogant and elite morsemen who don't

As opposed to the "virtual hell" of certain "arrogant and elite"
non-amateurs who don't get the respect and admiration they demand...

Do you know what JT65 is, Len?

No, was talkin' to Robert DeNiro. Taxi anyone? Where Jodie?

Actually, it's hard to tell PCTAs apart nowadays. Their mantras
are practically in harmony..."preserve the status quo as much as
possible"..."obey the LAW and TAKE that REQUIRED code test!!" (as
if the law cannot ever be changed)..."I didn't like CW until I HAD
to learn it to get a license and then found it 'fun'!" (as if all
would find it 'fun' if they tried to do so)."

>>> Real technicians don't look up pinouts either! ;^)

> You have chided me in the past for not *getting* a sarcasm in a post.
>
> Consider yourself chided.

No huhu. As I said, all PCTAs sound alike nowadays and so few have
either a sense of today's reality or of humor.

Then again, there was one in here last year who was bragging
all over the place about ballooning to "the edge of space"

and seemed to want all kinds of 'congratulations' for that
achievement before ever doing a thing about it.

I digress. Sorry. :-)

>>>>Yep - like the hams who pioneered HF radio in 1923...

>> rationalizations!!!
>
>Necessity is the mother of invention - and innovation.

What "invention?" Two experimenters tried out radio for the
first time in 1896. That's 27 years prior, over a generation.

"Innovation?" What was to "innovate" with spark transmitters
that had already been designed many different ways?

>> Awwwwwwww! You poor guys, never worked the Big Leagues of radio?
>
> Never particularly wanted to! ;^)

You should have tried it even if you hadn't wanted to...you might
have found it to be FUN! :-)

Tsk, tsk, tsk. That was called "serving one's country" in the
military. Three dozen high-power HF transmitters to be in charge
of each shift. OPERATING them. ["dipping the plate, peaking the
grid" during QSYs, just like the boat-anchor folks do today, 52
years later!]

Jimmie no like that. Jimmie say that OLD. Tsk. Jimmie never do
dat.

Kellie no like that. Kellie say dat just "meter reading." Kellie
never do dat.

Stevie weavie, da worsie nursie no like that. He say ALL LIES!
Stebie never do dat.

Buzzie Wuzzie, from da TV fiction outer-space shows, no like dat.
Buzzie never do dat.

All PCTA mad about dat. Poor PCTA. Too much beeping.

NCTA change law. Bye-bye beeping test.

Roger said:

"Hey Lardass, tell us why you were committed to the mental
nuthouse in Independance, Iowa for a year after you tried to
commit suicide! You really shouldn't have bungled it up, since
you have absolutely nothing to live for, depression boy."
??????????????

Poor Roger. He speaks from experience. Roger knows all too well the
humiliation of being admitted to a mental health institution.
The issue of suicide is all too familiar to Roger, but as with everything
else he has tried, he failed at that, too.

And speaking of nothing to live for, Roger is the Poster Boy Supreme.

Look at you, Roger. You spend an uncountable number of hours each day
stalking Lloyd. Your delusions have gotten so bad that you literally see and
hear Lloyd everywhere.
Can you, Roger, even go to the local store without imagining that Lloyd is
behind every display? Hiding behind the Campbell soup cans? Do you look over
your shoulder as you work in the yard, expecting to see Lloyd behind every
tree or bush? If your lawn mower doesn't start, do you accuse Lloyd of
putting a dirty spark plug in it? When your TV remote goes bad, do you
accuse Lloyd of replacing good batteries with bad? And God forbid the milk
in your refrigerator should go sour. You know how sneaky Lloyd is...he lives
for the opportunity to sneak into your kitchen and replace good milk with
sour. He's pretty good at picking locks in the middle of the night, but you
already know that.

You really should look into getting some help for your delusions. If you
don't, that little unbalanced Merry-Go-Round in your head is not going to
stop but will only spin faster and faster and faster until one day Chief
Stenger finds you hanging lifelessly from a closet rod. Not that this would
be a loss, but it would be an inconvenience for Stenger in that he'd have to
do an hour's worth of paperwork. You are not worth but fifteen minutes, if
that.

But there are other differences. Population density in BosWash is
much higher than in the Pacific Northwest. Things like telephones
and TV were here sooner, particularly in terms of "most people have
them". And most of this area has been "settled" by non-Native Americans
for 300+ years.

Another factor is which engineering disciplines and sub-disciplines you
encounter. There may be a lot more female
ChemEs than MechEs. Etc.

My class of 33 at Penn (1976, Moore School of Electrical Engineering)
graduated 3 women - all specializing in computers. I don't think Towne
School graduated any female engineers that year.

Of course that's ancient history compared to today's ratios, but
it shows a starting point almost 30 years ago.

I will add some anecdotal comments to that. At my school we graduated
approx 200 engineers and about 10% were women.

[snip]

Keep in mind that the majority of engineering jobs are at major entities in
major cities. Thus they will be more apt to be statistically
representative. In small companies and/or rural areas the numbers are going
to be skewed. I've worked at several companies where I was the only female
engineer out of a staff of from 5 to 10 engineers.

I've been in engineering for 30 years. I've seen virtually no
discrimination in this field as this country remains chronically short of
engineers. Oh there are spots in the country where it is difficult to find
a job and sometimes the economy slumps but that does not mean engineers are
not needed but that the companies make do with a short handed staff (been

there done that).

Instead I believe that women are more prone than men to select jobs more on the perceived desireability of the job location. They are more prone to select the office jobs rather than the plant jobs, thus placing themselves at the headquarters and technical offices rather than the factories out in the boonies and so on. Also there is a difference in what defines a desireable location. A higher percentage of the men will look at a facility in a rural location and say "now I can go fishing more often." There's probably a whole raft of reasons having nothing to do with discrimination that contribute to the disparity.

Dee, I'm going to guess (i.e., don't ask me for facts, figures, substantive studies, reports from the FCC/ARRL, etc) that of the Techs that have stayed in amateur radio, most have done so for the emergency communications aspect of the service. As such, they would typically stay on FM.

The ones who could learn Morse Code and have had to time to do so have moved up. Those who didn't have the time or couldn't learn it have moved on.

It's nice to see Miss Manners finally noticing something amiss in the ARS.

It's so refreshing to see Extras being Extras again; having their usual
disdain for the No Code Techs. And some people have to ask who chased
away the Techs.

If most of the VHF/UHF Contestors are Extra's as Dee says, why isn't CW
used most often?

Over on NIM Busters, people are so spooked by Woger that they keep running to new boards at new locations. The admin has even become so paranoid that he thinks almost everyone is Woger. He has accused at least two people of being Woger who are regular lurkers (they read but mostly don't post) and driven them away.

It's hilarious! Woger thinks everyone is Lloyd, and the admin thinks everyone is Woger.

Does that mean Lloyd owns Woger who owns the admin, and therefore Lloyd owns everyone?

Bwa HAHAHAHAHAHAHAHAHAHAHA! Time Lords always win in the end.

I don't embrace radio amateurs at all, "bb". A firm handshake is good enough for me.

My attitude toward many of the current crop of new techs is one bathed upon five years observation, since returning to the U.S. I haven't chased them anywhere. In fact, it has been just the opposite. I've tried to encourage them to use simplex on FM. I've tried to encourage them to try 6 meters along with 432 and 144 MHz SSB and CW. I can't be faulted that they don't act after being encouraged. If these folks are, in fact "trapped" in a world of 2m only FM repeater operation, they have fashioned the trap themselves by not being more curious about the rest of VHF/UHF amateur radio. There are avenues open to them but they aren't participating.

It is used, "bb", but ops are attempting to maximize score by working everyone, even those not using CW. I switch modes quite often during the course of a VHF/UHF contest. During heavy aurora, CW works much better than SSB. I'd have thought you'd have already known it.

There are none who cannot learn the code. However there are those for whom
other activities can and should have priority on their time. However that
is no excuse for eliminating it as a test element since the same argument
can be applied to the theory.

I agree with you Dave, I and the OM (who is our local club's VHF/UHF SSB guru) have worked hard at trying to get Techs involved with something other than repeater FM. While we have had some modest success, it's only a small percentage of the Techs who have jumped into these waters.

In one case the other station wasn't hearing me through the pile up (SSB) so I switched to CW and threw in the call sign. He immediately called for me (in voice) so I switched back to voice to do the contact. Worked pretty slick.

Amateur radio newsgrouping IS a GAME to Kolonel Klunk.

The only thing SET is Klunk's way of thinking (inflexible).

There's no MATCH except the lighted one always carried
by Klunk to start another Flame War in here.

Other than that, "Game, Set, Match" are the titles of a
later trilogy by novelist Len Deighton based on a
fictional British intelligence service. [not Deighton's
best work]

I'll just put the PCTAs of the newsgroup in the category
of "no one can join amateur radio unless they are already
IN it..." oxymoronic "brotherhood" of self-righteous
radio poseurs "serving their country" through a HOBBY.

Go out and corner the market on helium for your "reach to
the fringes of outer space," Michael. That's better than
the megacubic feet of Hot Air vented by this "patriot"
who behaves like a miscast stereotype of a Kommandant in
a half-hour TV sitcom about POWs during WW2.

Seig Heil!!! :-)

"He" wasn't claiming anything at that point beyond that women are a relative minority in Amateur radio.

If you want to join in a reasoned discussion about the paucity of women in the technical fields, and some of the reasons why, we can do that. But putting words in my mouth isn't a good way to get a reasoned discussion going.

Yeah, those jerks always invoke Godwin when someone is compared to the Nazi's. 8^)

I mean like, he was just sayin'!

Dee made it sound like Extras were working Extras on SSB. I guess it
wasn't at all like Dee claimed.

Because Dan said, "And MOST VHF/UHF contesting is done in SSB mode."

Was Dan wrong?

You know, you and David Heil K8MN ought to let Dan answer the questions
that I asked of Dan instead of jumping in here and getting it wrong.

Best of Luck.

That's not what the French do. They kiss you on both cheeks,
especially for handing out contacts and QSL cards for out of band
contacts.

> My attitude toward many of the current crop of new techs is one bathed

A penny for your thoughts.

Maybe they are on FM yet not trapped at all. Maybe if you let Dee and
Dan finish their thoughts on why they think the Techs are trapped we
would have something worth discussing.

My opinion (that means it's my opinion and I don't have to spend weeks
at the Library of Congress to back up anything that I might say or
forever be known as a liar and/or a gay man) is that those who joined
for emergency communications purposes are perfectly happy with FM, and
do not consider themselves as "trapped." All the "encouragement" in
the world doesn't change their perspective. They're getting what they
want out of amateur radio. What they don't need is to be denigrated by
the Extras that think they need to do more to be a "real" ham.

Man does that say it all in a well articulated paragraph. Valid points out
there
in tech land.

The Technician ticket originally was envisioned to enable those that had a
technical
slant that needed a place to play on the "air". It has degenerated into a
defacto
"entry level" to present day Ham Radio. What a bummer.

I bet a lot of those out there don't know that the original Tech written was
exactly
the same as the General. The ONLY difference was the General had a 13 WPM
cw test. Send and Receive. And the Tech had a 5wpm......and was available
by
mail.

> Dee D. Flint, N8UZE

Have you asked them why they are reluctant to jump into those waters?

Since they've not jumped in, does that change your attitude about them?

You hold a very interesting point of view. You say that since everyone
can learn the code, that it must be retained as a test element?

I say that it should be removed as a test element because it no longer
serves a regulatory purpose.

I don't recall anyone on here, other than you "bb", using the word Shameful
or
Clueless regarding the Technician licensees. All I see is folks stating
they don't
understand why the Techs don't take full advantage of their full license
privileges.

You sir, are nothing but a agitator and a disgrace to ham radio in general,
assuming
you have a license that is.

"bb" is just full of all sorts of assumptions, ain't he boys and girls?

Using his logic then all us "higher" class operators need to get out of
EMCOM, eh?

I'll be sure to tell the Extra class Emergency Net Control operator next
time I see her.

Indeed it does. David has articulated, and Dan has agreed that a Tech
really isn't worth much as an amateur if they don't do the things that
Dave, Dan and Dee want them to be doing. I'm sure that your attitudes
spill over into your communication with those unworthy Techs.

Degenerated? Dan, I'd like to introduce you to the FCC sometime. It
was the FCC that turned the Technician license into your disdained
entry level to present day "Ham Radio."

No I have not commented on anything with the FCC other than BPL and sending in reports about
K1MAN.

I figured out a long time ago the FCC was basically a lap dog of the ARRL when it comes to
dumbing down of the license structure. And my pitiful input wasn't going to have any affect
at all.

So "bb".....does that blow your mind, or what?

Dan, you're welcome to tell her anything you want. She's probably
already aware that you usually get it wrong anyway.

Correct.....in fact I see CW activity INCREASING on VHF. At least 6
meters, which is all I have running, right now.

Years ago it was nearly impossible to get a CW contact on VHF. In fact a
lot of rigs, homebrew and/or commercial didn't even have a key jack in them.

I like seeing CW on VHF. I do like everyone else does, if their trying to
maximize QSO's, contest or otherwise. Both modes.

I do. You used the phrases, "not a clue" and "what a shame" to
describe Techs who chose to be "stuck" on FM.

All I see is folks stating
> they don't
> understand why the Techs don't take full advantage of their full license
> privileges.

You go beyond that. You imply that there's something wrong with them.

> You sir, are nothing but a agitator and a disgrace to ham radio in general,
> assuming

>
> Dan/W4NTI

You are the disgrace, Dan. Your bad attitude about Techs says it all.

Let me guess... You're an Extra, right?

"attempt"? Hardly!

Len used the following phrases in reference to K8MN:

From: Mike Coslo on Fri 17 Jun 2005 22:07

"Kolonel Klunk"

"Klunk's way of thinking"

"the lighted one always carried by Klunk

"That's better than the megacubic feet of Hot Air vented by this
"patriot" who behaves like a miscast stereotype of a Kommandant in a
half-hour TV sitcom about POWs during WW2."

"Seig Heil!!! :-)"

If that isn't a clear Godwin example, nothing is.

Or do you think the one smiley makes all of Len's
verbiage somehow acceptable behavior?

You're correct. Dan claimed the mode most often used was SSB, not you.

So, in the interest of accuracy, can you give a breakout by mode and by
class?

I have never said that they were trapped. It happens to be a belief
expressed by some of the anti-code test people that they are trapped above
30mhz. I've always contended that any such trap is one of their own
perception.

> My opinion (that means it's my opinion and I don't have to spend weeks

>

I do not denigrate any one based on their license class. For those who are getting all they want out of VHF FM, I am happy for them. But I have no patience for those who want additional privileges without passing whatever is the license requirement of the day. I know a couple of Techs who have been waiting to get a General until the code test is removed but they have been waiting for ten years. Wasting 10 years is foolish.

I was told, when Novice Enhancement came along, not to pick up a
microphone because I would never get good at the Morse Code and
advance.

No other operating mode/skill has a practical pass/fail exam. That
makes it arbitrary.

>
> That's a matter of opinion.
>
> Dee D. Flint, N8UZE

Please state the regulatory purpose that a Morse Code exam and CW use
provides.

Wonder why we aren't supprised that top-posting johnnyboy would find a
way to attempt to discredit a ham with his 7 year old enjoying radio.
Johnnyboy, with the way you seem to hate ham radio and those who
participate, why don't you just turn in your license and go back to the
'freeband'?

Hello, Dan

Been there, didn't want that T-shirt. The danger back when was that if you couldn't pass the 13 WPM, you had two choices: one was work on your code while the other was to take the tech.

Some folks back then wanted the General but settled for a tech license when they couldn't pass muster at 13. Unfortunately, if you got on the air (back when, 2 meters was the novice voice band to try and get more activity on 2 meters!) it was possible to *never* work on the code and you were stuck as a tech. Most likely 6 meters was the band of choice as the best front ends might have had a 4.5 dB noise figure on 440 MHz. Even 2 meters wasn't all that busy; Heathkit sixers and twoers were the rigs of the day. I really wan't familiar with any territory above 30 MHz back then.

The other choice was to work on your code. The novice license was issued for one year and was not renewable. I took this choice and it took me a while to get my code speed up. When I did take the test and pass 13, I was good for about 18 (which helps when you're nervous and travel 60 miles to take the test administered by the FCC, not a VEC).

Of course, there were those that were only interested in VHF and above. Moonbounce was just starting to happen and dx records at 1.2 GHz and above were likely measured in miles. Not many. A very low noise pre-amp on 440 MHz probably had a 4.5 dB noise figure. Once you headed into microwaves, you simply had a diode mixer front end and not only noise, but signal loss as well. Not at all like today. Most vacuum tubes had interelectrode capacitances and delays in getting electrons across the void that prohibited most from operation much above 500 MHz. There were lighthouse tubes, travelling wave tubes, and others (I had a couple of gizmos that looked like Sputnik. I never knew what they were intended for LOL).

Funny thing is that if you do get to a reasonable level of code proficiency (as required by the General class and above back when) there was yet another danger: you just might enjoy it :))

They can't do both ?????? ie computers and radio .....

> ... the amount of knowledge entering young minds is staggering to the
> consciousness ... and this is progress at its' finest..

Maybe but a better answer would come from someone 50 years from now ...
perspective you know .....

. radio pales
> in what it has done to offer such opportunities and advantages and feels
> it has no obligations or responsibilities to move in such productive
> directions--

John perhaps you could fill us in on what you have done to furthur your
concept of this service to younger people .. I hope you have had some young
ones over the house to see your station ....or given a talk to the Scouts
...or been involved with the local club for a no-code course.

or, at least the "high priests" in control at this time
> do...
>
> Warmest regards,
> John

OK John you have finally convinced me ...I am going outside with the bolt
cutters and take down my antenna ...I will put all 5 rigs on E-Bay tomorrow
... while I am at it all my radio tools and parts will go also ....same goes
with all my radio books I have collected throughout the years as they are
now obsolete .... the keys will be melted down into paperweights ..... the
3k plus that went into a new radio room will be turned into a storage area
...... all radio software will be deleted ....Now at last my mind is
free to get on the internet to read spam, delete porno and listen to your
mindless pontifications on this "new protocol".

73 oh wait no ...... see you on this group ......

KI3R oh wait .... I need to get a new internet handle .... and
burn my vestments .... but wait I am not in control .....

Still in training to be a "master of the personal attack", huh? Puzzled why it inspires disgust rather that respect?

My post is a statement of fact--no attack, it would only feel like that to someone who had some personal interests in mind...

>
>Have you asked them why they are reluctant to jump into those waters?

The Elite don't "ask." They COMMAND. :-)

>Since they've not jumped in, does that change your attitude about them?

They are allowed to continue existance. [ho hum]

As of 17 Jun 05, there were 722,134 U.S. amateur radio licenses
exclusive of Club Calls. Of those, 293,897 were Technician Class
making them 40.70 percent of all licensees. There were 55,816
Technican Plus licensees, 7.73 percent of the total.

Combined, Technician and Technician Plus licensees number
349,713 or 48.43 percent of the total number of licensees.

The Elite (the PCTA Extras, that is) will rationalize that
"few of those Techs are active" in an attempt to rationalize
that "they don't count." :-) Unfortunately for the Elite,
they will soon be the MAJORITY among all U.S. licensees.

Dee and the others will "change their attitude" only in a quasi acknowledgement that they MIGHT exist...but wouldn't want their daughters marrying any of them (or equivalent).

Ah, but I DID!

It's just a simple question, Jimmie: HOW MANY CHILDREN HAS
JIMMIE MICCOLIS PARENTED?

We'll just put YOU down as ZERO. Tsk, tsk.

>Where have I claimed to be "in electronics", Len?

In this newsgroup.

Tsk, tsk, Jimmie no say where he work or for whom.

Jimmie not work at all?

>You're not "professional" at all, Len.

Tsk, tsk. I work for money. Dat called "professional." :-)

> Do you tell folks
> at the IEEE to "shut the hell up, you little USMC feldwebel"?

Tsk, tsk, Jimmie, getting all mixed up in quotes.

Kolonel Klunk was called a feldwebel.

Jimmie know what means by "feldwebel?" Jimmie ignorant slut.
"Feld" is field in English. "Webel" is a very old military
term for "underofficer" or, in English, NCO.

Jimmie write in here dat "feldwebel" is a "corporal." Not
so. Jimmie WRONG. Jimmie not ever admit he WRONG.

>Still waiting for you to confront Mr. Powell - the one you called
>"Mikey". Oh wait, he's not part of FCC anymore.

Mikey Powell GONE, Jimmie. Got confronted, go bye-bye.

Mikey in "undisclosed location?" Hiding where all WMDs are
stored?

Ask Donnie Rumsfeld where Mikey Powell, Jimmie. Ask nice.
Not ask nice and shrub will INVADE YOU!

How many children Jimmie Miccolis parent?

Not all items apply to all people but here are a few: Walking, talking,
reading, writing, riding a bicycle, skating, mathematics, any sport at even
the the most rudimentary level, playing any musical instrument at even the
most rudimentary level, computer literacy, typing, college courses. The
list could go on, but just about everything mental or physical a person has
learned is harder than code.

The regulator purpose of the exam is that it shows the candidate knows that
particular basic of ham radio.

No one has ever claimed that CW use or the use of any other mode (SSB,
non-code digital) provides a regulatory purpose. However throwing that

comment into the discussion illustrates that you wish to get rid of not only the test but the use of CW. So I will not continue to participate in this thread.

Of whom 317,917 are current and 31,796 in the grace period.
>
> The Elite (the PCTA Extras, that is) will rationalize that
> "few of those Techs are active" in an attempt to rationalize
> that "they don't count." :-)

That claim is incorrect.

> Unfortunately for the Elite,
> they will soon be the MAJORITY among all U.S. licensees.

How do you know, Len? What's the trend?

The number of Technicians (including Pluses) with current licenses
peaked back in March of 2000, at 338,334. It has
since dropped by more than 20,000.

Meanwhile, the number of current Extra class licenses has
climbed from 75,985 in March of 2000 to 106,806 today.

You are invited to show how the trend in Technician/Tech Plus license
numbers predicts any sort of majority in the future.
Since all Technician Pluses are renewed as Technician since April 2000,
it's logical to combine them when looking for a trend.

That's right - every time! Does absolutely no good, but it just has
to be done, I suppose.....

I think the comparison in question was to the bumbling TV 'Nazis' on
"Hogan's Heroes", not the 'real' ones - but hey, Godwin must be
appeased... And as usual, the OC was right there as predicted! :)

The version of Godwin's rule that I use says that the person
who uses stoops to calling their opponent "Hitler", "Nazis"
or references to them, has lost the argument. That the discussion
continues is irrelevant. Len has lost the argument.

> But it just had to be done, didn't it?

No, it didn't. But I did it anyway. Is there a problem with
that? Do you think Len's slurs are acceptable behavior?

There are several folks here whose 'slurs' and language are much worse than this example (a reference to the bumbling and comical 'Nazis' on "Hogan's Heroes") - always has been, always will be. It's not my job to run around and point that out all day every day.

It's not my job to point that out to each and every participant on this group Jim - is it yours? Why?

(73 de Jim etc. sig missing again)

> would have something worth discussing.

My experience, which is now 8 years out of date, is that the techs did not
own the kind of station that you need to operate ssb or cw in a contest.
We would go to a friends house who had a wider range of bands (6m,2m,220,440
and 1.2gHz) than we had at home and work the contest from their using his
call sign.

It was quite fun, he had a barbecue in the summer and pizza in the fall.

One guy (a tech) would show up with a commander 2m amp at 1pm, spend
an hour getting ready and would not leave it except for "nature breaks"
and grabbing some food for the entire contest unless someone asked to
work 2m.

Geoff.

Yes, Len has done worse....

> (a reference to the bumbling and
> comical 'Nazis' on "Hogan's Heroes")

The Fuhrer was a feldwebel in WW1

> - always has been, always will be.

That claim is incorrect. Usenet is not eternal.

> It's not my job
> to run around and point that out all day every day.

You have avoided the question.

Do you think Len's slurs are acceptable behavior?

> It's not my job to point that out to each and every participant > on this group Jim - is it yours? Why?

Your argument seems to be that since Len will probably exhibit
his typical immature ethnic-slur Godwin-violating bad-pun
Unknown-Soldier-insulting jackass behavior anyway, there's no
point in pointing out when he is, indeed, exhibiting his typical
immature ethnic-slur Godwin-violating bad-pun Unknown-Soldier-insulting
jackass behavior. Is that about right?

Perhaps you have a valid point, since if what Len seeks is
attention, pointing out his typical immature ethnic-slur
Godwin-violating bad-pun Unknown-Soldier-insulting jackass behavior
gives him that attention.

>
> (73 de Jim etc. sig missing again)
>
Not missing - omitted.

The original meaning of "73" is "a friendly greeting
between operators". In the context of amateur radio,
this means between amateur radio operators.

It would be inappropriate to use the greeting to
someone who is not an amateur radio operator.

You are correct there Leo. Jim is perfectly capable of not responding
to anything Len posts. We all are.

And of course, Len knows quite well that all he has to do is put in a
reference to the Nazi's, and it will get a response. Sets the hook quite
regularly, he does! Irresistible bait apparently.

Stalemate. Looks like everyone is getting exactly what they want.

Lack of patience and describing them as foolish does indicate your
feelings for them. Waiting is worth it to them or they wouldn't do it.
Is it so hard for you to consider that they really, really don't want
to learn THE code?

Bingo!

We cannot control Len's behavior here.

We can however, control our own.

I don't know about your mail reader, but mine has a couple levels of filtering. I can filter by name, or the easy way is to simply hit "k" at the subject line. I never see that subject again.

That being said, I have mixed feelings on the filtering. I use it to get rid of the lunatic fringe topics, but little else.

I don't filter people like Len though, as I look forward to his postings. They are entertaining. So if the people who find his postings offensive quit getting into p*****g contests with him by filtering him out or just ignoring him, I'll have lost that bit of fun.

In the USA, the FM equipment has hit rock bottom in the last few years.
Almost any amateur of any income level can purchase new FM equipment.
Multi-mode rigs of course are much more expensive. Many, but not most
of the Techs that I knew had at least 2M ssb.

I'm not sure that I'd agree, Mike. Jim seems to feel compelled to
respond to anything and everything regarding Len. From early morning
to late at night, 7 days a week, he wages his futile war on the
newsgroup.

Doesn't look like a choice - more like an obcession.

>

Can you play the string bass?

There's an FCC sticker on teh back of my stereo. What if the FCC were
to make it a requirement that you have to pass a string bass exam in
order to play music on your stereo?

> particular basic of ham radio.

But why no other practical operating exam for other modes?

> No one has ever claimed that CW use or the use of any other mode (SSB,
> non-code digital) provides a regulatory purpose.

No mode is >mandated<, yet we have a practical operating pass/fail exam
for one mode. That is arbitrary.

However throwing that
> comment into the discussion illustrates that you wish to get rid of not only
> the test but the use of CW.

Dee, not at all. I wish only the arbitrary Morse/Farnsworth Exams to
be retired.

But recognize that the FCC mandates the use no particular mode. You
can use CW all you want or not us it at all. So why is there a
practical operating exam for this one mode but not all other modes?

And why is CW use allowed by No-Code Technicians on VHF, but not HF?

Why did Jim Miccolis N2EY say about Hans restructuring proposal, that a
CW exam would be a barrier to CW use?

> So I will not continue to participate in this thread.
>
> Dee D. Flint, N8UZE

I understand how uneasy it must make you to have to face the truth of
arbitrary licensing requirements and still advocate a Morse/Farnsworth
Exam.

If you wish to discontinue healthy, legitimate discourse with respect
to amateur policy, I understand. It is not for the faint of heart.

Best of Luck, Brian

I'm sorry that legitimate, civil discourse on amateur radio policy has
you upset. The past couple of days exchanges has been more policy
discussion that this group has seen in years. It's too bad that you
want to abstain just when I thought we were getting somewhere. Your
core beliefs about amateur radio must have been shaken, so I wish you a
speedy recovery.

Len, it looks like Dan and Dee have bailed out on civil, legitimate discourse on amateur radio policy. Dave has made himself pretty scarce as well.

I see there's a Jim Miccolis N2EY posting below. I haven't gotten to it yet, as I'm saving the best for last. Hope he doesn't disappoint as he has ever since he made the comment, "A Morse Exam would be a barrier to CW use."

Welp, Jim continues to disappoint. He's made some vague denials as
usual, nothing substantive.

Jim manages to respond to my comments only after someone else has.
That way he doesn't have to respond directly. WRT Len, that's a
completely different matter.

It still cracks me up that Jim said of Han's restructuring proposal,
that a "Morse Code Exam would be a barrier to CW use!" Hi!

Phila. and it's surrounding five-county region is a huge and
technology-diverse Gotham City with hundreds of small
engineering-based employers and the numbers are *really* skewed - in

the direction of the very small number of woman engineers I run into
where I work.

> I've worked at several companies where I was the only female
> engineer out of a staff of from 5 to 10 engineers.

Can't imagine any such thing around here . . As an example go back to
when I popped out of Drexel which in 1963 was the biggest private
undergrad engineering school on the planet. Probably still is. There
were 87 ME grads, 89 EE grads and significant numbers of civil,
chemical and metallurgical engineers plus the physics and chemistry
majors. Maybe 400 all told. There was ONE, uno, singular woman in the
whole bunch and she was chem major. I haven't seen any huge shift since
then either, one female engineer out of ten in a small organization
where I've been are still true oddities.

> I've been in engineering for 30 years. I've seen virtually no
> discrimination in this field as this country remains chronically short of
> engineers. Oh there are spots in the country where it is difficult to find
> a job and sometimes the economy slumps but that does not mean engineers are
> not needed but that the companies make do with a short handed staff (been
> there done that).

. . . Tell me . . ! I think you've brought up an important side issue.
My experience strongly indicates that many in the general public
consider engineering a lousy biz to get into as far as employment
stability is concerened. They're right, and it's gotten much worse
over the years. I'd have a hard time today recommending engineering to
a kid male or female considering career options.

> Instead I believe that women are more prone than men to select jobs more on
> the perceived desireability of the job location. They are more prone to
> select the office jobs rather than the plant jobs, thus placing themselves
> at the headquarters and technical offices rather than the factories out in
> the boonies and so on.

I think you just hit the nail on the head Dee, the skew is in my court.
I work in areas women simply don't get into. Schlepping around
neighborhood machine shops for a living like I have is obviously not
"woman's work" for any number of valid reasons which go 'way beyond the
fact that they happen to be engineers. So of course woman engineers are
scarce the way I see the engineering biz.

> Also there is a difference in what defines a
> desireable location. A higher percentage of the men will look at a facility
> in a rural location and say "now I can go fishing more often."

I'd like to be there when some lady engineer/ham lusts for a nice quiet
antenna location out in the boonies and is married to some city boy . .
.

> There's
> probably a whole raft of reasons having nothing to do with discrimination

> that contribute to the disparity.

Indeed: The code has been cracked.

It's a valid interpretation.

For what? I did not use Hitler/Nazi references to anyone
involved in the discussion. I simply stated the fact
that ol' Adolf was a feldwebel in the German Army in WW1.

In other words, you won't answer the question.

See how that works?

None of the above.

> Lid-like behaviour, wouldn't you think?

Not at all.

> >The original meaning of "73" is "a friendly greeting

Most people don't know the original meaning.

> >It would be inappropriate to use the greeting to
> >someone who is not an amateur radio operator.

> Which I am. And have stated many times before.

And your callsign is?

You can state almost anything here, but as long as you
remain an "anony-mousie", there's room for doubt.

> Poor memory? Google 'er up.....

I know what you claimed. But there's no independent
evidence.

Maybe there's been some band openings to France on 6m?

Dan and Dave and the remaining living PCTAs haven't much changed
since '98 in here. They command a consensus of common thought;
i.e., CONCEDE to THEIR consensus, none others.

>I see there's a Jim Miccolis N2EY posting below. I haven't gotten to

Oh, oh...dat put Sister Nun of the Above into ruler-spank mode
again. She demand posting quote of where, when she make dat.
Dis be court of law! Bang da gavel, heah come de judge, heah
come de judge...

Jimmie can't bear to acknowledge that the current percentage of
Technician and Technican Plus class licensees are now at 48.4
percent of all individual (non-club) licensees in the USA.
Jimmie has to rationalize that with all sorts of rather irrelevant

"excuses" common to the Elitist PCTA viewpoint of all those commonfolk not embracing morsemanship with loving open arms.

ARS (aka Archaic Radiotelegraphy Society) is in full flower in here, their self-appointed self-righteous "representatives" damning all who do not respect their mighty elitist rule. The ARS only has "fun" when all licensees do as the Elites do, that is, doing narrowband morse beeping.

The LAW is the LAW and NO LAWS CAN EVER BE CHANGED according to these "guardians of amateur paradise." Code test MUST remain. PCTA say so. No arguments against. Period. [sigh...]

Happy Father's Day to you, Brian.
